SOMERVILLE'S AUTOBIOGRAPHY.

Just published, price 5s. with Portrait of the Author.

AUTOBIOGRAPHY OF A WORKING MAN.

By ALEXANDER SOMERVILLE,

"ONE WHO HAS WHISTLED AT THE PLOUGH."

"A book to be read with great interest. The picture of Mr. Somerville's early life is attractive, as a piece of Scotish character, worthy of its place in a national biography."

Attracture.

"Mr. Somerville writes plainly and forcibly, and with a power of interesting his reader."—Examiner.

"The well-known author this work has done the public a great service by publishing his Autobiography."—Economist.

London: ROBERT HARDWICKE, 38, Carey-street, Lincoln's Inn.

1 Other Popular Works are in preparation for this Series.

London: CHAPMAN & HALL, 193, Piccadilly.

NEW NOVEL.

AGNES VALMAR.

3 vols. post 8vo.

Opinions of the Press.

"It has the one great merit of a novel—that it maintains the reader's curiosity, interests and amuses him. The reader will be not likely to lay down the work till he has finished it, and he will find it tedious nowhere..... It has undeniable freshness of feeling, occasional cloquence, and some passages with a touching truth in them."—Examiner.

"The book is written in a pleasant and agreeable style; the dialogues are easy and well put together; and the descriptions of feeling are of themselves sufficient to excite an interest that will cause the story to be extensively read."

Observer.

"The doctrine which this charmingly-written novel is intended to inculcate is, that where hearts are made for each other, it is vain to attempt to part them. In illustration of this truth—if such it be—the author has composed a most powerful tale....As a sample of unselfish love, she (the heroine) stands unrivalled in fiction."—folin Bull.
"It embodies a strange developement of the tender passion, wrought out by some stirring situations and much passionate dialogue, both giving decided evidences of power."—Sunday Times.
"This is a good novel: natural and consistent in its delineation of character, skilful in the construction and development of the plot, graphic in description, and sparkling ever and anon with animated narrative and lively dialogue...
"This is a good novel: natural or originality, with considerable dramatic power, it is no wonder that the reader finds his attention agreeably enchained from the beginning to the end of the romantic but not extravagant history."

"The novel before us is precisely one of those which we think is eminently successful in the regions of sentiment.... Morning Post.
The incidents and situations of the tale are very well managed; the dialogue is well sustained and lively, and the pathos of some of the scenes, especially towards the end of the tale, is extremely fine.....We venture to assert that 'Agnes Valmar' will be a favourite. We are sure it deserves to be ac."—Dublin Execusing Mail.

"There is an ardour and characteristic intensity about its style, of which great use might be made....which remidds us of the excited tone of composition of Wilkie Collins's 'Basil."—The Press.

Now ready at all the Libraries, in 3 vols. with Illustrations on Steel by LEECH,

A SECOND EDITION OF

THE GREAT HIGHWAY:

A STORY OF THE WORLD'S STRUGGLES.

By S. W. FULLOM,

Author of 'THE MARVELS OF SCIENCE.'

"It is a healthy sign of fiction when it deals with a fresh fact; and this story throws a light, not unfairly, on the social systems of the day. The description of the literary world is strongly painted, but not overstrained. The interest of the story is well sustained, and there is an honest effort to place in their true light some of the most prominent features of modern society."—Globe.

of modern society."—Giobe.

"This is a story of that 'Great Highway,' the World, detailed with an air of actuality that makes the reader hear, see, and think. We have life at May-fair and Saffron-hill put in opposition without violence to truth. As an exposure of the knavery met with by the literary man, we know nothing like what is detailed in this work. There must be authority for this indignant outery. The book is a new triumph for its author, and one of the most really enchanting stories of the day."—Dispatch. London: Longman & Co.

THE NEW NOVELS.

NOW READY.

UBREY. By the Author of 'EMILIA WYNDHAM.' 3 vols. AUBREY.

ATHERTON. By Miss Mitford, Author of 'OUR VILLAGE,' &c. With Portrait of the Authoress, and other Illustrations. 3 vols.

Author of 'OUR YILLAGE,' &c. With Portrait of the Authoress, articother illustrations. 3 vols.

"Atherton' is a charming take, writen in a cheerful kindly, buoyant spirit, and refreshes the reader like a drive in the country. It abounds in those descriptions of English seenery in which Miss Mitford is always felicitous. In the preface there is a brief and placid record of the painful circumstances under which 'Atherton' was written. It will excite the synapstry and respect of all who was written. It will excite the synapstry and respect of all who made has made her friends, Mary Mifford ought to feel their influence—she has enlisted the very selfishness of human nature in her favour, for these are few whe would not wish her a specty restoration to health; if only that she might write another. "Like all Miss Mifford to the self-the favour is the same of the self-the self-th

PHEMIE MILLAR. A Scottish

Story. By the Author of 'THE KINNEARS.' 3 vols. Story. By the Author of 'THE KINNEARS' 3 vols.
"'Phemic Millar' is a pleasant book to read, owh of the houseliest of details a certain fuscination is evoked, which insures the
reader's interest to the end. It is only the record of a Stotch
family in a small fishing town, in Fifeshire, but the genial humour
and perfect insight into the inner life and character of the different individuals of the story, excite in the reader a personal intermination appriations. In the milling with her crude, ardent,
comployment—with her oddness, her shortcomings—her artistic
instincts that have a touch of genius—the temptations, hopes, and
disappointments of her young girlish life, which ripens and developes into a rich and nolls womanhood—make her as charming
the author for giving us such a fresh pleasant story as 'Phemic
Millar,"—Albescum, a heroine as we have met at the author for giving us su Millar."—Atheneum.

Millar,"—Athenous,
"It is the Scottsh life and the strength as well as the raciness of
its character that the interest of this novel consists. In that point
of view it is remarkable for the variety of its conceptions and the
persons are numerous—is distinct and individual, with the national
characteristics clearly marked."—Spectator.

PROGRESS and PREJUDICE.

By Mrs. GORE. 3 vols.

sy Mrs. GORE. 3 vols.
"This entertaining and particularly elevar noval is compounded with admirable tact." Progress and Prejudice' is not a novel to be analyzed, but to big saleed, and that comphatically, as a giece of uniform the progress and Prejudice' III. Source to the authors fresh accession of well-carned popularity."—John Bull.

JANET MOWBRAY. By Caro-LINE GRAUTOFF. 3 vols.

LINE GRAUTOFF. 3 vols.

"This very pleasant tale of 'Janet Mowbray' is a love story, and a very good one-full of agreeable variety and interest. It is told gracefully and easily, the writing is good, and the dialogue is natural. The charm of the novel less on much in its merit as a convey any just idea of its described to the convey any just idea of its described to the convey any just idea of its described in the pression on the reader by the pleasant appreciation of country air and country seemen that is felt everywhere in it. Really, 'Janet Mowbray' is a good spring novel, full of such feeling as the spring brings with it."

Exeminer.

REGINALD LYLE. By Miss PARDOE, 3 vols.

PARDOE. 3 vols.

"Superior on any of Miss Pardoe's former productions."—Post.

"The various pursuits and personal traits of the actors in this story afford scope for clearer delineation of character. Mrs. Stainton, the scheming match-making, fashionable school-mistress, is very well drawn; and the government clerk, Mr. Lancaster, has many points of amusing originality about him. The plot, moreover, is seld developed, the mystery on which the interest hinges believed to be a superior of the self-school developed, the mystery on which the interest hinges believed to be a superior of the self-school developed. He mystery on which the interest hinges believed to be a superior of the self-school developed in the mystery of the last. One characteristic throughout, and which will make it acceptable not only to those who take it up for amusement, but to more thoughtful readers."

History of Constantinople—[Histoire de Constantinople, &c.]. By Baptistin Poujoulat.

2 vals. Paris, Amyot.

THE idea of an invasion of Constantinople from the North is as old as history. At no time, ancient or modern, has that city been long free from the assault of barbarian enemies. The site is too grand—the climate too luxurious—the position too commanding—the outlook too beau-tiful, for that city to escape being—at present as in the past, and in the future as at present the object of envy and of craving to less favour-ably-located hordes. He who has looked down from the Seraskier's Tower on that incomparable scene,—he whose fancy has been once fed by that marvellous and poetic blending of all natural and artistic beauties—the blue and all natural and artistic beauties—the blue and brilliant sea—the purple outlines of the Asiatic hills, so grandly crowned by the snows of Olympus—the rocky islands in the Sea of Marmora—the bending lines of the Bosphorus, alive with ships—the waters of the Golden Horn, over which a thousand boats are gliding like so many summer birds—the graceful slopes of Pera and Galata—the fanciful and graceful mixture of towers, and minarets, and cypress groves—of sunny plains and gorgeous uplands—of castled crag and ruined aqueduct—of glittering mosque and solemn cemetery,—he who has ever gazed and solemn cemetery,—he who has ever gazed on all that flushed, and bright, and glowing scene, and with the impression of the picture fresh in mind, will think of the flat plain, the fetid marsh, in which the cities of the North are built — of the bleak winter beyond the Steppes—of the Neva without a bridge, and the capital with scarce a gleam of sunshine,—will have no difficulty in understanding the full meaning of the Eastern Question. No doubt the Muscovites are ambitious: all growing nations are ambitious,-none more so than France, America, and England. If the Anglo-Saxons were at Moscow, they would press down on the Crimea; and being in the Crimea, they would press on to Constantinople. Being in England, they have tended incessantly towards the South,—as India, Australia, the Western Islands, and the Cape settlements all testify. The same race on the Hudson has pressed without a day's cessation towards the sunnier South,—as France has also on Algiers. This movement from North to South is a law of nature as old as history,—this turning from the north wind to the sun is as natural to man as to flowers and trees.

duty to protect ourselves and our friends, as we do from the polar blasts. Therefore it is that, by a necessity which overrides and coerces social action, and in spite of ancient antipathies of race, ereed, language, manners, and institu-tions, the armies of civilized Europe are now encamped at the entrance of the Dardanelles, prepared to drive the Northern hordes back again to their steppes and marshes, and to close up the South against their inroads by a great alliance of nations. Herein lie the spirit and the significance of the historical fact, of which our generation is the wondering witness.

But although the fact itself is simple, the

illustrations and expressions of it are almost infinite. How to deal with the vast literary progeny of the Eastern Question, is a problem which presses daily more and more on the critic. Here we have some dozen new works on the subject. Most of these, if they appeared alone, would require detailed exposition; as it is, they must go forth to our readers in the mass. The documents brought together by Mr. Morell are of the utmost interest. They prove by irrefragable evidence that the movement towards Constantinople, which is an instinct in the people, has been in a state of organization by the Press at St. Petersburgh ever since the conclusion of the last European war. Innumerable State papers have been drawn up by experienced Russian generals and diplomatists during thirty years—papers in which all the interests and conditions of the case have been duly set forth. Having the same elements thirty years ago as now to deal with, the words and warnings of Prince Lieven and Pozzo di Borgo indicate the present situation of affairs as clearly on their side as do the 'Speeches' of Lord Clarendon, Mr. Layard, and Lord Shaftesbury on ours. Does not this memorandum, drawn up in 1825 by Prince Lieven, seem as if written yesterday ?-

"In the present state of Europe, when the great Powers are free from all direct occupation, it would be impossible for any one Power to take arms, and profit by our embarrassment, without the consent of one or more of the great Cabinets. Such an attempt would therefore enter into the category of a combined plan. Can this combination, alone formidable to Russia, be formed? Up to the present moment, it does not exist. At least, England is not of it; and a league, in which she does not take part, is not a league, in which and does not take part, is not to be feared; as nothing very threatening need be dreaded, unless she joins it, and throws in the weight of her opposition. It is not improbable, however, that the mere likelihood of a war between Russia and the Porte might lead to a union, and perhaps a general one; for what is the feeling towards Russia? The whole of Europe looks upon this colossus, whose gigantic strength only requires a sign to be directed against her, with dread. Thus, her interest is to support the Ottoman power, as the natural enemy of our

Again, would it not seem as if the conferences with Sir Hamilton Seymour, in St. Petersburgh, were based on the following note laid down in

the same State paper ?-

"Amongst the governments from whose hostility we have most to dread, there are two, who are too much under the control of public opinion to engage lightly in a struggle without its sanction. If, added to these considerations, the Emperor were to de-clare the aim of his policy in the war in question; if he were to show that this has undergone no change, and that the tendency of his actions has been un-varying: what Cabinet, apart from individual in-terests, would not place implicit faith in the loyalty of his intentions? These events will develop themselves before the moment of action; incidental circumstances may favour us, and prevent our recourse to extreme measures. England already seems into extreme measures. England already seems inclined to court us; such a combination offers itself us as human foresight cannot calculate upon. The fying their personal hatred and antipathy, whatever It is a law, however, against which it is our Emperor's prudence and sagacity will see how to may be the importance of the wrongs for which they

take advantage of it; but I venture to affirm that if next spring Russin is in her present position, war alone will relieve her from her difficulties. And this war should take Europe unawares: it should be prompt, in order to profit by the moral restraints which would retard a good understanding between the Courts, and also to make it physically impossible for them to parry the blow that we should strike."

—It is thus throughout. Russia, in these documents, is always the same. She never ceases to march on Constantinople.

Mr. Cole's book is a compilation, and not a very careful one. His illustrations are often at fault. But it presents a brief and readable epitome of facts, probably not so accessible in any other shape. We quote a paragraph on the

future of Finland .-

"Next to Poland, there is no country which has been so ill treated as Finland, and none to which Russia has so little claim. It was treacherously won, and has been cruelly trampled on. The inhabitants remember their long incorporation with Sweden, the happiness they enjoyed under her rule, the military happiness they enjoyed under her rule, the military reputation which they materially assisted her to acquire, and the commerce which formerly flowed into their ports. They participated in the glories of Leipzig, Lutzen, and Narva, and recruited the ranks of Gustavus Adolphus and Charles the Twelfth with brave and loyal soldiers. They are the only real mariners the Russians can find to man their ships, and are compelled to fight relativity ander the and are compelled to fight reluctantly under the claws of the eagle, while their eyes are turned with the sickness of hope deferred to the Swedish cross. They would rise to a man and do battle to the death, to escape from the protection of Russia, and return back to their ancient nationality. When Buxhowden, in 1808, under the orders of the Emperor Alexander, wrested Finland from Sweden, he issued a proclamation, expressing the deep regret of his master that he was compelled to invade a peaceful country for the purpose of obtaining a guarantee that the King of Sweden would submit to whatever terms he might please to dictate. At the same time he promised not to interfere with their internal legislation, to leave them the full exercise of their laws, statutes, and customs, and to pay and feed his troops entirely at his own expense. A few months later, the Swedish monarch addressed a letter to the Emperor of Russia, which speaks eloquently for the manner in which this proclamation was observed. 'Honour and humanity,' he says, 'require me to make strong representations against the innumerable horrors and vexations which the Russian armies have permitted themselves in Swedish Finland. The blood of the innocent victims calls for vengeance upon those who authorized such cruelties. Can it be made a crime in my Finnish subjects not to have wished to let themselves be seduced by promises which are as fallacious as the principles on which they are founded are erroneous? Is it worthy of a sovereign to make it in them a crime? I conjure your Imperial Majesty to put an end to the calamities and the horrors of a war which ought to call down on your person and your empire the malediction of Divine Providence. It must be remembered that this remonstrance was called forth long after resistance in the field had ceased, and Sweden had bowed under the loss of the province she was too feeble to retain. Russian rule is more detested in Finland than in any other appanage of the empire."

M. Germain de Lagny gives us a deep insight into the material, the nature, and the organization of a Russian army. It is a barbaric horde,—drilled, flogged, and starved into disci-pline. Here is the raw material and Muscovite mode of bringing it together in masses.-

"The army is kept up by a system of recruiting. The number of men to be furnished by the Boyars is determined, every year, by the state. The choice of the individual men is left to the arbitrary judgment of the nobles or their intendants. Provided the recruits are neither halt, nor lame, nor blind, the government accepts all that are sent, without

seek satisfaction. They care very little about breaking up a family, or tearing away a son from his father and mother, infirm old people who will be left withand mother, find our people who will be left without assistance and support; they spread desolation
and misery in every house which has resisted their
exactions, and, when a recruit is taken, his son, if he
be less than ten years old, follows him. After having
gratified their feelings of vindictiveness, they proceed to cleanse all the villages of robbers, vagabonds, rogues, thieves, idlers, drunkards, and incendiaries, until they have made up the number which they are obliged to contribute to the *quota* required of the district. The government itself seizes and enlists, on its own authority, and without appeal, all awkward coachmen, and thieves whose muscular force adapts them for being converted into machines of war. As soon as the selection is made, the authorities proceed to the toilet of the men they have taken. In order to prevent desertion or flight, they cut their hair very short in front, and almost shave it behind, and then send the recruits off to the chief town of the district, where they are delivered into the custody of a non-commissioned officer, charged with the task of conducting them to the depôt, whence they are drafted off into the different regiments and drilled. The army is, as we see, composed, for the most part, only of the very dregs of the serfs; no other method of recruiting it is ever practised in Russia. This explains the profound feeling of horror, the invincible aversion, of the entire Russian population for military service. There never was, to my knowledge (and I have also been informed so by others) an in-

stance of any one enlisting of his own free will."

Our vivacious French writer is not always,
we suspect, to be followed in trusting confidence. Such stories as the following will, we
imagine, be taken with a few grains of incre-

dulity on this side the water .-

"There exists an old tradition, accredited at Mos-cow, and in which the people blindly believes, namely, that the Czar never reigns more than twenty-five years. Having ascended the throne towards the end of 1825, Nicholas, in the course of nature, ought, therefore, according to this tradition, to have ceased reigning in 1850, and the two opposite parties were prepared, if necessary, to aid in bringing this result about. From 1839 till towards the end of 1847, a vast net-work of conspiracies spread over Russia. The Czar suspected their existence, but could not seize their thread. The tchinn suffered nothing of its plans to be perceived. Its opposition manifested itself by an eternal small war of piquant jokes and even caricatures, which covered the tables of their saloons, of course without the names of their authors. Nicholas was threatened with the same fate as his father, when the revolution of February suddenly burst out in France. Vienna, Berlin, and Stockholm fell into a state of anarchy, and the populace was guilty of the most abominable excesses. The Boyars were seized with fear at this state of liberty, and felt that it would cause the loss of their privileges and fortune. They remembered the massacres of the military colonies in 1831, and trembled lest the same fate should be reserved for themselves. They accordingly once more drew near the court, and grouped themselves around the Czar, whose assassination they had been plotting only the day previous,'

M. de Lagny is almost a Muscovite in his sympathies, and he evidently thinks the Emperor Nicholas scarcely a lower being than the angels, -so that his statement of facts as against Russia may be received pretty freely. Schimmelfennig, writing in America, looks upon the war now raging on the Danube as a surgical operator regards "a beautiful case." He is a revolutionist, or at least a speculator and a theorist on revolutions. Few readers, we dare say, fail to see that this revolutionary view of the present war is one very needful to master. Revolutionary prospects everywhere open up in the midst of present troubles. The moment Austria takes a part—as take a part she must— the beginning of the end of her will assuredly have come. Italy on one side, Hungary on another, Bohemia on a third, all seem to wait for the inevitable hour. If she join the Muscovite-as liberal writers would appear to wish-the Anglo-

French fleets, by throwing a few thousand stand of arms on shore at Venice and Fiume, could raise Italy and Hungary against her. If she join the Western Powers, Russia makes no secret of her resolution to provide employment for her on the northern frontier. Our author reviews, with great calmness and with an appearance of deep military knowledge, all the combinations of Europe which can affect the features of the war. In separate chapters, he tells us what will be the result of an Anglo-French fleet supporting the Porte—of an Anglo-French fleet and army supporting the defensive of the Porte—of Austria joining arms with Russia, Prussia remaining neutral—and so forth. His views of this last combination we

present to our readers .-"Prussia preserving an apparent neutrality, will protect Russia and Austria against the marching of a French army through Germany, and consequently against a direct attack; it will keep down any revo-lutionary movements in Russian-Poland, in Bohemia, Marovingia, and the German part of Austria, and will allow Russia and Austria to employ on the field of battle the troops they would otherwise have required for this service. Austria will furnish Russia with an army of at least 150,000 men, with the case of operations on the Save and the Danube, from the Adriatic to Wallachia, with good fortresses and a short and excellent road for the masses of the Russian army, stationed in Poland, leading over Cracow and Vienna to Belgrade. To facilitate still over its whole extent. These new political relations entirely change the operations of both the beligerent parties as far as the Balkan. The principal attack goes down the Danube, not up, and is therefore less difficult; the importance of the Dobrudja is trans-ferred to Bosnia-Servia, the support from the Sea for the defence ceases, and the aid for the offensive, from the revolutionary movements in Servia, Bosnia and Macedonia becomes more probable, and resist-ance on the part of the Servians and of Belgrade is out of the question. The Austrian-Russian offensive may be raised to 300,000 men; before them is the clear road through the valley of the Morava, and the Nissa to Sophia, and that through the valley of the Danube to Widden. Though this army should march in two bodies, each of these will be numerically far superior to the Turkish army, stationed at Widden, and will have a prospect of ctory. Widden and Rustchuk cannot decisive victory. Widden and Rustchuk cannot long resist the skilful Austrian besiegers. As soon as they fall, or are merely invested, the passes of Tirnova and Sophia are open, and the operations in Thrace will begin in the manner described above, Adrianople again becoming of the utmost importance. That under these circumstances the Western Powers cannot expect successfully to defend the Turks in Turkey is evident. The road from France to Vienna leads not over Constantinople, and that from London to St. Petersburgh does not pass the Dardanelles. Attacking Austria in Italy, Russia in the Baltic with the aid of Sweden, confining the neutrality of Prussia to its proper limits-these are the means to withdraw the Russo-Austrian superiority from Turkey. In other words, nothing but a general war will enable the Western Powers of Europe to protect their interest in the East; but if such a war is to take place both sides must appeal to the people, to the same people who but a few short years ago were deprived of their liberty by perjury and assassination; arms must be placed into the hands of the same people who, with difficulty, were disarmed but two and four years ago;

from the still scowling revolution?"

'Shrines of the Holy Land contested by the Russian and the Turk' is a volume devoted to the illustration of a topic which, though figuring very largely in the early part of the present quarrel, has long since lost its general interest. Those who wish to understand all the aspects, past as well as present, of the Eastern Question may nevertheless turn to its pages for instruction.

the bolts must be drawn and the keepers be removed

Dr. Cumming vaticinates in his usual amplitude of style and illustration on the fall of

Turkey. He reads the fate of that country, not on the banks of the Danube or on the shores of the Black Sea, but in his own personal interpretation of the prophets. With such perilous and intangible theories as are here propounded we will not meddle. Our business is with history, not with prophecy.

we will not include. Our business is with instruction, not with prophecy.

M. Ustriáloff, the Russian author of 'The Reign of Nikolái I.,' translated by Mr. Roberts, is Professor of History to the University of St. Petersburgh. This fact will explain to the reader that his work is a Russian—we may say a Court—view of the present reign. Of course it is all glory and prosperity. Nicholas is the greatest of emperors and the best of men. If it be only for its novelty, our readers will doubtless like to hear what M. Ustriáloff has to say about the grand military power of Russia. Here it is.—

"The Russian army is known to all Europe,

which for more than a hundred years has resounded with our victories; but never did our army attain to such a pitch of discipline as it now may boast of. The military ordinances carefully revised, reduced to unity, ameliorated and augmented from the most important rules and regulations of the operative army, to the utmost minutiæ, and the management of the commissariat, have revivified and harmonised all the parts of so vast and complicated a machine, the chief strength of which lies in its proper arrangement. All the obligations of service, all the conditions of authority and responsibility have been defined with greater accuracy, and a regular audit appointed. The soldier is guaranteed by the government in all things necessary to him, in his maintenance, nourishment, and equipment; the service is therefore his sole care—his sole object. He is submitted to a vigilant superintendence, which traces his every step, his thought, and his wish; anticipates his errors; and severely, but not cruelly, visits each omission; so that the fifteen years of a soldier's service, convert into a useful citizen, the man, who not unfrequently before his entrance into the army, was, by his offences, a burden both to his family and the public. How much higher, much more to be admired is the moral dignity of a Russian warrier, taken from beneath the paternal roof—from the embraces of his beloved family by the lot of service. Having faithfully and truly served his sovereign and his country, he returns to his native hearth, or enters upon a calling conformable to his resources, firm in his devotedness to the throne, rigid in the fulfilment of his duties, active, prudent, and industrious. Military promotion has, in the course of the last twenty years, taken a new direction; now-a-days, it is diffi cult for an officer who has not received a fundamental and solid education to obtain a commission. The guards, the army, and the fleet, are yearly replenished, for the greater part from such as have been reared in the cadet corps. The engineer and artillery schools, and other establishments for military instruction, are under vigilant inspection; therein future officers, from their youth up, become accustomed to the order of service, to the unconditional accomplishment of their duties, learn the military art experimentally and scientifically, acquire an emulation to noble ambition, and enter the world with a mind enlightened, and with a soul full of the most lively gratitude to him who cares for them as his own children. Protected by sea and land by our own forces, we have no need to trouble ourselves about alliances; and we look with indifference on the petty intrigues of the West in its impotent envy of our immoveable strength."

Dr. Michelsen's work is less partial than is customary with biographies. In it, the Emperor is neither angel nor fiend; only a cold, harsh, reserved man, very ambitious, and not very scrupulous. The best side of his character appears to be its home side, and, as somewhat of a relief from the warlike character of our previous extracts, we will reproduce Dr. Michelsen's passage on Nicholas in his own house.—

"Nicholas rises at an early hour and goes soon to the business of the day, after having taken a short walk. The most scrupulous order reigns in his study; the walls are adorned with pictures of regihas two the inte Despite much in is no sl had th the En undoub are not a youn that h de-can ironica never on the it in at voung freque amous

to his mental costumes. The furniture is elegant, but not over rich; while there is nowhere to be seen a trace of useless ornaments. The dinner-meal usually observations in Italy. Belgium and Holland. of useless ornaments. The dinner-meal usually takes but little time, for it is served quickly, while the dishes are comparatively few. The Czar eats heartily, but is very moderate in his drink. He neither smokes nor takes snuff. In the evening he has two or three cups of very strong tea, and spends the interval between that and bedtime at some game. the interval between that and bedtime at some game. Despite his regularity of life, which is necessarily much interrupted by receptions, travels, &c., the Czar is no slave to habit. According to those who have had the best opportunity of judging, his relation to the Empress is simple yet noble—an expression that undoubtedly admits of varied interpretation.† Women are not without their influence at his court. In 1846 a young lieutenant of the guard danced a polka with Lady Dashkoff, so much to her entire satisfaction that he was soon after installed as one of the aidesde-camp to the Czar. His friends composed a new polka, which they dedicated to him under the ironical title of the 'Promotion Polka.' Much has never been said of the exhibition of parental feeling never been said of the exhibition of parental feeling on the part of Nicholas—at least he did not display it in any lively degree while his children yet remained young. The Grand Duchess Olga, the late Princess Alexandra, and the Grand Duke Constantine, were frequently indicated as his pets; though, judging outwardly, since they have been grown up, a large amount of form and ceremony has accompanied their intercourse. Custine, in his work 'Russia in 1939,' says,—'Nicholas forgets his majesty only in domestic life, where he is reminded that man has his happiness independent of state duties.' There is, however, a degree of coquetry in the domestic life of the Winter-palace. Persons well acquainted with the Winter-palace. Persons well acquainted with the imperial family assert, that though Nicholas may love his children dearly, yet it cannot be denied that he assumes towards his sons a serious and cold de-meanour, while his behaviour to his daughters is chivalrous in the extreme; but this is a conduct which chivalrous in the extreme; but this is a conduct which he generally adopts towards ladies. The weak and sickly Empress he treats with compassionate affection: we can find no better word. When from indisposition she is confined to her apartment, he frequently visits her there; and the newspapers, which are always loud in praise of his undiminished affection, mentioned that, at the time of the imperial stay threads to the converted the state of the single property and the state of the converted that the state of the state at Naples in 1847, he used to carry her in his arms up the staircase to her chamber. During the burning of the Winter-palace in 1836 (says Grätsch), Count Orloff reported to the Emperor that the fire was and asked him what he desired to be saved in it, as no time was to be lost. 'Only my portfolio,' was the reply; 'it contains the letters of the Empress

which she wrote me during our engagement."

We cannot wind up our long account of these volumes on the Eastern Question more appropriately than by a word in favour of M. Poujoulat's 'History of Constantinople.' The first volume embraces the course of events from the origin of Byzantium down to the conquest of the city under its new name by Mohammed the Second; the second brings the story down to our own day. Few cities have been the theatres of such stirring events and such striking historical

panoramas.

Treasures of Art in Great Britain: being an Account of the Chief Collections of Paintings, Drawings, Sculptures, &c. By Dr. Waagen, Director of the Royal Gallery of Pictures, Berlin. 3 vols. Murray.

Dr. Waagen visited us first in 1835, when he published the results of his visit in a work, enti-tled 'Art and Artists in England,' which we favourably noticed at the time. The present book is an expansion of his first design, enlarged by him during some months spent in England in 1851, as Juror to one department of the Great

and deeper artistic experience, derived from his observations in Italy, Belgium and Holland, Paris, Vienna, Dresden, and Munich. In addition to the paintings mentioned in his former book, he has now seen and examined twentyeight collections in and near London, nineteen in the English counties, and seven in Scotland. He has devoted some time to the study of English illuminated MSS., and to our national and private collections of drawings and sculpture.

The Doctor, though by no means very com-olete in his view of English Art, is able from his knowledge of foreign galleries to give us sound opinions as to the value and authenticity of our Art-treasures. There is a steady, patient enthusiasm about him which serves to disarm criticism and to soften annoyance at his neglects and backslidings. We grieve when he is obliged to lie flat on his back in the Hamburgh steamer to escape sea-sickness, and we feel relieved when he enjoys his first English dinner, at "No. 7, Curzon Street, May Fair." No one but a German would quote Goethe's lines, "the Atlas bears would quote Goethe's lines, "the Atlas bears houses of cedar on his giant shoulders," simply because he had just counted twenty-eight Thames steamers passing his own vessel,—or could burst out, when the Custom House officer wondered at his single-soled shoes, in the rhapsody of Ulysses, "Bear, and thou dear heart, thou hast already borne much." No one can rejoice more than we are disposed to do when Mr. Labouchere regaled him with that practical dish, roast beef, that reminds him of the Homeric age, and "that truly excellent national dish, plum-pudding," which reminds him of geology and the pudding-stone, and brings in the English language and a quotation from Schiller. We are sorry that the Duke of Devonshire should have had a severe cold; but can yield to no one in our delight at his urbanity in asking the Doctor in, and spreading before him a luncheon, "which differed from a dinner in nothing but the name." The book wants weeding of these Pepys-like trivialities, and crushing up into shape. It would be better, too, if the arrangement consisted rather in subject than place, that we might be spared the perpetual transition from picture galleries to MSS., and from MSS. to drawings or ecclesiastical antiquities. At present, the work has too much the air of a mere note-book published, rather than the careful and laborious results of a long investigation into the existing state of English Art. A list of our dead and living painters and their chief works should be given, with a note as to their present possessor, when such could be obtained. Such a list is now possible, but it grows less so every day.

Dr. Waagen does not devote much space to general observations; but the remarks he does give are sensible, though not profound or exhaustive. He says that English art, encouraged by Henry He says that English art, encouraged by Henry the Third, was still more patronized by the three Edwards; and that our missal painting, or as he will call it "miniature painting," of that time excels that of all other nations except the Italian, and is equal even to theirs. The tendency is always realistic; but the allegories are original, the animals true to nature, the chiaroscuro is careful, and the colours are bright and harmonious. The general taste for the Fine Arts thus fostered in the cloister spread at the Reformation to the court. The Doctor does not explain how. It originated, like the poetical

approaching the glories of Florence or of Rome. The king began to collect before he came to the the king began to conect before he came to the throne; and on his brother Prince Henry dying, became possessor of his cabinet. In 1629 he purchased the collection of the Duke of Mantua for 80,000/. This gallery had been 150 years forming, and was thought one of the finest in Italy. It contained Raphael's Cartoons, and works by Andrea Mantegna, Giulio Romano, Correggio, Titian, Leonardo da Vinci, and many pictures by Rubens and Vandyke. Of the earlier Ger-man and Flemish schools there were works by Gerhard van Haden, Holbein, Albert Dürer, George Pens, Lucas Cranach, Lucas van Ley-den, and Antonio More. The total number of pictures in the royal palaces was 1,387, with 399 works of sculpture. The king had 433 medals, and a collection of valuable drawings, including a drawing-book of Michael Angelo's. All these treasures were sold by Parliament, after the Civil War, for 118,080l. 10s. 2d .- the seven Cartoons being bought in by Cromwell for 300/. Then went from the country Mantegna's Triumph of Julius Czesar, and Raphael's tegna's Frumph of Julius Cæsar, and Kaphael's Holy Family, Correggio's Education of Cupid, Titian's Entombment and Jupiter and Antiope, and Leonardo's St. John the Baptist. They were bought by the King of Spain and the Archduke Leopold:—a Dutch amateur and a German banker divided the spoils with Queen Christina and Masaria. The speat Arandel col. Christina and Mazarin. The great Arundel collection went to pieces in the same war: the pictures were lost, destroyed or burnt, and the statues were dispersed. The Buckingham col-lection was sold by auction at Antwerp to fur-nish the young Duke with a few ducats for wine and dice.

Charles the Second took some pains to collect his father's scattered treasures. The States-General handsomely returned all they could obtain. He recovered seventy valuable pictures, including Mantegna's Triumph of Cæsar,-and eventually increased the royal collection to above 400 pictures, and 100 works of sculpture. James the Second added some hundred paint-James the Second added some hundred paintings, showing an admirable predilection for seapieces. Whitehall, continuing the chief depôt of Art, contained 738 pictures, which were nearly all lost in the fire of 1697,—including three Leonardo da Vincis, three Raphaels, eighteen Titians, eighteen Giorgiones, &c. The best private collection of this period—that of Sir Peter Lely—containing 167 pictures was Sir Peter Lely,-containing 167 pictures, was sold by auction about this time.

When the taste for collecting revived, at the commencement of the eighteenth century, a falling off in taste was visible. The Venetian school and that of the Carracci remained popular; but the chief purchases were of the masters of the decline of Art, as Carlo Dolce, Sasso-ferrato, &c. Holbeins and Van Eycks were never seen; and the Earl of Cowper's collection, never seen; and the Earl of Cowper's collection, at Panshanger, Herts, is the only exception to this rule. Drawings and second-rate sculpture were, also, much purchased. In 1780, Sir Robert Walpole's gallery was sold for 30,000. to the Empress of Russia; and, about the same time, eighty antiques, belonging to Mr. Lyde Brown, of great value, were lost to the nation. But, with the French Revolution and the distribution of French collections came our

But, with the French Revolution and the distribution of French collections came our revival. The Duke of Orleans' great gallery, consisting of purchases from Christina of Sweden's, from Richelieu and Mazarin's which is a supplied to the collection of the collectio plain how. It originated, like the poetical innovations of Surrey, in our intercourse with Italy. Henry the Eighth patronized Holbein, and formed a collection of some 150 pictures. A century later—for Dr. Waagen does not tell us much of Sir Antonio More, who painted Queen Mary, or of Zucchero, who visited Elizabeth's court—Charles the First formed a gallery of paintings on a Continental scale somewhat

[&]quot;† A couple of years after her marriage, the present Empress paid a visit to her father at Berlin. Nicholas, two days after her departure, took post, travelling incog. and arrived at the palace at Berlin one hour before his consort, who was not a little surprised to be welcomed by her husband. It is the only time, it is said, that he indulged in a hearty laugh."

were purchased by the Duke of Bridgewater and the Marquis of Stafford. When the French overran Italy many of the noble families sold their collections to English bankers and rich amateurs, - and many churches parted with their altar-pieces. The Fesch Gallery and that of the Duke of Lucca have since been sold ;and Lord Ward purchased the entire collection of Count Bisenzio. English dealers overran Belgium and Holland in the same manner. The English were the chief purchasers at the sales of the Hoffman, Verstölk, and King of Netherlands' galleries.

The French invasion of Spain, in 1807, opened the convents and palaces to English dealers, as enterprising and more generous than French robbers. Seville surrendered many Murillos. Even the Escurial opened its gates at the sight of English gold; and the Convent of Loeches gave up its colossal Rubens. In 1817 Mr. Buchanan purchased Talleyrand's collection, which was divided between Mr. Webb and Mr. Allnutt. Two years before, Lucien Bonaparte's and General Sebastiani's Spanish pictures were sold in London, and the increase of travelling made foreign picture purchases more numerous than ever. The national tendency ran in favour of the Flemish and Dutch schools and the works of the Carracci. Various collections of drawings of the Old Masters were now formed: Sir Thomas Lawrence alone spending 40,000l. upon that and similar objects. Missals and old en-gravings were eagerly bought; and in 1801 Lord Elgin enriched England with the marbles of Phidias-the glory of Art, and the cause of all successes we may achieve. In 1753 the British Museum was founded; and in 1816, a

The Museum, now, is the first in the world in point of sculpture; is second to few in antiquities and coins; inferior only to Paris in its missals, &c.; stands high for Dutch etchings, but is still weak in drawings from the Old Masters. Dr. Waagen thinks the appointment of efficient curators a great step in advance. Art; and he rejoices in the establishment of the Schools of Design. He notices Lord Ashburnham's collection of mediæval "miniatures" the excellent drawings by the Old Masters at the Taylor Museum, Oxford; the collections of modern paintings, and of mediæval Art, &c.

public gallery of pictures was first instituted.

Dr. Waagen attributes the late rise of Art in England to many causes, and chiefly to our original ecclesiastical painting being so entirely superseded by the introduction of Italian paintings and those of a French style, from which Hogarth at last emerged as our first English painter.

In another edition, Dr. Waagen, we are sure, will render his book of great value to all lovers of Art. It is at present interesting; it will, with proper additions and curtailings, become valuable and complete.

Day and Night Songs. By W. Allingham .-Peace and War. An Ode. By the same. Routledge & Co.

MANY of these songs, odes and lyrics have seen the light of day in other shapes-a good reason for us not to devote much space to them-lest we treat the reader with a twice-told tale, -but no reason at all why those who love the calm and simple music of that class of our younger poets who feel that art is required in song as well as genius, should not take these little books to heart. Mr. Allingham is a real minstrel. His lines make music to the ear rather than to the eye-as all true melody in words should do. His style is Tennysonian; and the quality of

was again sold by auction. The Italian pictures his thought is sweet and simple rather than broad and grand. He is very clear. His painting, too, is accurate: whether the subject be a village spring, a meadow in the sun, a girl laughing, or a lady tried under the sternest fortune, the picture is always outlined to the fancy, and touched off with a vanishing tint that recalls the painting of the school of Raffaelle. The reader of Mr. Allingham's verses will also be struck with a sense of the poet's reserved power. Everything appears easy to him. He never seems to put his shoulder to the wheel. These lyrics might have dropped from some one in a dream. Something always seems to have been left behind-some word, some bar of music, seems to have dropped out-so that the imagination is constantly appealed to to complete the idea and the symphony. As an example of the lines which suggest more to the fancy than they picture to the eye, we will quote the following, called 'The Witch Bride.'—

> A fair witch crept to a young man's side, And he kiss'd her and took her for his bride. But a Shape came in at the dead of night, And fill'd the room with snowy light. And he saw how in his arms there lay A thing more frightful than mouth may say. And he rose in haste, and follow'd the Shape Till morning crown'd the eastern cape. And he girded himself and follow'd still, hen sunset sainted the western hill. But, mocking and thwarting, clung to his side, Weary day!—the foul Witch-Bride.

As an example of word-painting in another style, we give the ballad of 'Lady Alice.'-

Now what doth Lady Alice so late on the turret stair, Without a lamp to light her, but the diamond in her hair; When every arching passage overflows with shallow gloom, And dreams float through the castle, into every silent

She trembles at her footsteps, although they fall so light; Through the turret loopholes she sees the wild midnight; Broken vapours streaming across the stormy sky; Down the empty corridors the blast doth moan and cry.

She steals along a gallery; she pauses by a door; And fast 'her tears are dropping down upon the oaken floor;
And thrice she seems returning—but thrice she turns

Now heavy lie the cloud of sleep on that old father's brain!

Oh, well it were that never shouldst thou waken from thy

sleep!

For wherefore should they waken, who waken but to weep?

No more, no more beside thy bed doth Peace a vigil keep,

But Woe,—a llon that awaits thy rousing for its leap.

An afternoon of April, no sun appears on high, But a moist and yellow lustre fills the deepness of the sky: And through the castle-gateway, left empty and forlorn, Along the leaftess avenue an honour'd bier is borne.

They stop. The long line closes up like some gigantic

worm;
A shape is standing in the path, a wan and ghost-like form,
Which gazes fixedly; nor moves, nor utters any sound;
Then, like a statue built of snow, sinks down upon the
ground.

And though her clothes are ragged, and though her feet are bare, And though all wild and tangled falls her heavy silk-brown

hair;
Though from her eyes the brightness, from her cheeks the bloom is fled,
They know their Lady Alice, the darling of the dead.

With silence, in her own old room the fainting form they lay, Where all things stand unalter'd since the night she fied

away: But who-but who shall bring to life her father from the clay?

But who shall give her back again her heart of a former

The 'Ode on Peace and War' is reprinted from the Daily News.

The Jacobin Club: a Contribution to the History of Parties and Political Morals during the Revolutionary Period-[Der Jakobiner-Klub, Sc.]. By J. W. Zinkeisen. 2 vols. Berlin, Decker; London, Williams & Norgate.

This work, as now completed, justifies the expectation we briefly expressed [Athen. No. 1303] on the appearance, in 1852, of the first volume. It more than fulfils the modest promise of its

title; and may be described as the best monograph hitherto produced on a subject which virtually includes the whole pith and marrow of the French Revolution. It is, indeed, obvious that, other things being equal, the last work in a field which new revelations are constantly enlarging, should be the best,—as the sources of knowledge are multiplied, and means of comparison and correction grow more abundant. Of these, Prof. Zinkeisen has taken advan-tage, with a mastery acquired by long study of the subject during a residence in Paris, and furthered by the rich collection of materials now preserved in the Royal Library at Berlin.+ The memoirs and documents committed to the press within the last fifteen years would alone have sufficed to give new bases of certainty on many important points hitherto left dubious or distorted. Among these, may be especially named the Histoire Parlementaire, edited by Buchet and Roux, completed in 1838,—the 'Correspondence of Mirabeau with Count de la Marck,' invaluable for the first period of the invaluable for the first period of the Marck. Revolution,-and the 'Mémoires' of Mallet du Pan, scarcely less important in reference to a later stage. To these and other authorities the Professor has paid due regard; and generally proves himself conversant with the whole literature of the subject,—his work in this respect being a good example of that comprehensive industry which is peculiarly the merit of German authors. In the qualities which are needed to make a full historical apparatus fruitful and instructive, Prof. Zinkeisen may rank before most of his learned countrymen. He evinces a clear and masculine judgment, acute discrimination, precise and rational perceptions of fact, preferring wellfounded deductions to showy theories or vague conjectures; - and, above all, a truly impartial spirit, which is a gift not less rare than valuable in the historian of a theme so apt for the display of political bias. His style reflects the character of his intellect;—it is luminous, succinct, and expressive; without pretension, yet not without elegance. His book, in short, is well written-which is no common merit in learned German histories. This advantage of manner, no less than the interest of the subject,-which is exhibited not in bare outline, but richly filled with anecdotes, portraits, and other dramatic illustrations of the scene, -keeps attention alive throughout the work: voluminous though it is, from its careful regard to all collateral points of information, and of the minutest details, the authorities for which are copiously inserted in the text. These two volumes, of 667 and 1019 closely printed pages respectively, contain in themselves the substance of a little library; yet they may be read to the end without any risk of that weariness which is apt to attend on such bulky performances.

Altogether, considering the fullness of its authorities and their fair and able treatment, the work, we apprehend, must for the present be termed the standard history of "the Jacobin Club:"-and it can only be superseded by such extensive discoveries of new material as can hardly be expected at any future period. The chief actors are already before the world in their own confessions; the springs of all the main transactions may now be traced in known records; and of the contemporary features enough has been preserved to justify the con-clusion that further supplements, which are

[†] This collection of pamphlets, placards, newspapers, caricatures, &c. appears to resemble that which is understood to exist in the British Museum; but, unlike-ears, it is rendered available to the historian by its "exemplary arrangement according to dates and subjects, and by the excellest extalogue of materials, in which the whole is fally and appropriately described."

most likely to accrue in this department, may indeed deepen, but will hardly alter, the extant outlines of the great Revolution.

The Jacobin Club, as already remarked, was destined to be the soul of that monstrous portent,—and this destiny was fulfilled in a manner not less remarkable than the enormity of its effect. It was, from its first rise, the continuous and progressive representation of the abnormal principle, however it may be termed-revolutionary—anarchic—destructive—which began to work in the very heart of the business, from the moment when the ruinous state of the old system was confessed by the compelled recourse to the States-General. The various systematic means tried by political theory, within the bounds of a legitimate solution, no less than the attempts of the stationary parties—Royalists and Churchmen - to retain their advantages intact-formed the ostensible side of the problem; but in the state to which France had then sunk, this problem could not be wrought out by any of these singly, nor by any possible combination, compromise or arrangement of all or any part of them. On the other side, unnoted at first, growing up in dark, questionable, and irregular forms, gradually overcoming all surrounding influences, and revealed at last in full significance and tempestuous strength amidst the exhaustion and failure of all other influences, as the real genius of the time, there arose an unconstitutional, chance-born, self-developed entity, which has been termed Clubbism,—but which was in reality the impersonation of that demoniac or fatal spirit which inexorable Nemesis invoked to fulfil a doom towards which France had been advancing for centuries. This impulse may be seen, from the first beginning, in the Bréton and from the first beginning, in the Brēton and other similar Societies,—unconsciously expressing itself as a principle of action beyond the pale of appointed political contrivances, of whatever kind,—constantly revealing and enforcing this principle with more and more emphasis, while it absorbed on all hands the elements necessary to its growth, and threw off each of its former constituents when their active power was exhausted; thus preserving, by a strictly organic process, its continuity and expansion, amidst a perpetual change of the materials assimilated,—until it had gained its complete developement, and stood openly wres-tling with the system which it was appointed to destroy. The attempt of the emigrant minority, supported by foreign arms, to stop its course, while it exasperated its violence, imparted to the struggle another feature, the nobility of which the Reign of Terror itself cannot obscure. This was the assertion of the resolve, essential to national existence, to forbid the dictation of armed strangers in a domestic quarrel: -and the energy which their menace provoked saved France from the calamity of a civil war that must have ended in her dismemberment. This is the heroic part of the Revolution; and the call which roused the nation to its duty, when the risk seemed desperate, was the tocsin of the Jacobins. In short, whatever of evil and of good peculiarly marked the French Revolution, is written in gigantic characters in the history of the Jacobin Club.

Although the Professor does not expressly take this general view of his subject, it plainly results from his masterly display of revolutionary progress, on the one hand, and of the impotence, on the other, of all that attempted to check or tamper with it. He confines himself to such reflections as arise within a narrower circle, from the successive moves of this tremendous game. His explanations of these are ample and impartial; and afford perfectly safe estimates of the various successive

momenta of the subject,-the ultimate comprehension of which, however, requires a larger method of interpretation than he has attempted. Thus, his conclusions, while expressing posi-tive truth in particulars, will often need discussion on broader grounds, in order to a complete historic generalization.

This is especially true of a class of remarks that touch the line of difference between the revolutionary force and those which successively tried to make head against it. Of such instances, a few may be extracted as characteristic.—Their aptitude to the special features of the moment cannot be denied; but these, it may be seen, are but partial expressions of a larger system of relations. The following refers to a scene early in the Revolution,—in the Society of Les Amis du Peuple.—

Your decrees on the actual holders of prebends are unjust," it was answered, not without asperity ... "What, then?" coolly replied M. de Séjour; "who said that they were just?" On this point, in fact, there could be no doubt whatever; but endless fruitless complaining of this was truly not the way to alter or amend the case, "Right or wrong?" at that moment—as in all the great crises of political revolutions—the main question, alas! no longer stood on that basis. Other, and quite different, motives were now in question. Have you Power, or have you no Power, that will enable you, whether by strength of character and superiority of talent, or by the weight of your party, to strike in with vigour and effect, to control circumstances, instead of wailing over them? That was the question which it now behoved every one to ask himself, and clearly to apprehend, who desired to play a part, to gain influence and make good, maintain, and carry out what he recognized or imagined to be his just rights. He who is destitute of this power, in times of revolutionary disorder, will, though with the best of principles and the most upright intentions, but too soon become the sport of the vulgar passions of his opponents, and fall at last the victim of his own weakness.

At a later period (February, 1790), when the Society of Les Amis de la Constitution was fully installed at the Jacobins, this is the description of principles entertained by a majority of its members and of the causes of their impotence as against the more resolute minority .-

that time, it is evident that the majority actually consisted of men who, as true patriots in the sense of the Revolution of 1789, exerted themselves to obtain and secure in a legal way, a triumph for the principles of reasonable and practicable liberty over the oppression of privilege and the obsolete and now untenable pretensions of the aristocracy. Far from any desire to favour a republic, or, indeed, from even dreaming of the possibility of a new form of government, they were, on the contrary, bent in good faith on trying to establish the monarchy and the whole state fabric on another and more lasting basis, by appropriate institutions in harmony with modern ideas. In a word, they desired the union of freedom and monarchy: _but in trying to solve this problem they fell into collision not only with those who were absolutely hostile to the Revolution itself-not only with an extreme party in the Club, which at first was feeble enough_but also fell out among themselves; and these contentions lamed their activity and weak ened their influence. Uncertainty of vision, want of character, self-deception, such were, in the majority of cases, the causes of error which misled them in this course, and which finally made them the mere instruments of a party, with which neither their opinions nor their objects allowed them to co-operate.

From the first development of the Jacobin Club down to the crisis of its power, successive attempts were made, by dissentient parties of all colours, to gain a footing on the same ground,—all alike ineffectual, and this from a cause common to all:—want of agreement in the mass, want of hearty faith, sincerity, and self-devotion in the individuals. The Impartiaux, Amis du Peuple, Société Patriotique, Amis de la Constitution Monarchique, Cercle Social (des Amis de la Vérité), above all, the

Feuillans, successively broke away from the Mother society, tried to contend with it, and failed in the trial:—only confirming by their fall the credit and power of their antagonist.
The "Constitutional Monarchists," a disjointed medley of self-indulgent ambition, pedantry, and selfish pretension, fell after a short exhibition of insignificance, in the most sudden and contemptible manner, hooted to death by a mob in the Jacobin interest.

Such was the pitiful existence, and such the lamentable end, of the society. * * The intentions of its founders, at least, were honest, and its aim was laudable, but their powers and means were too feeble, and both were miscalculated. In this way-it now became fully evident-there was no hope of effecting anything against the overwhelming power of the Jacobins. The whole system of the Monarchists, if it can be termed a system at all, being intrinsically vague, purblind, and equivocal, had moreover this main defect, that, while it sought to keep on terms with all parties, it was unable to command the least confidence from any single one.

Another rival club, the Cercle Social, founded by Abbé Fauchet, had no better exit (July,

1791), and it deserved a worse .-

These were the "Friends of Truth" who had, laboriously and without any true vocation, tried to plant themselves on the summit of a moral system professedly Christian, which they borrowed and abused, by the side of a philosophic theory, partly distorted, partly misunderstood; and who dreamed that from this elevation they could command the Revolution, and all the world to boot! ginning and end of their activity was not truth, but falsehood and hypocrisy,-and of this they were the first to bear the just penalty. Swept away by the revolutionary whirlpool, they perished in its abyss.

The relative effect of the main agencies op-

posed to each other is seen in the strongest contrast as the crisis draws near. The following passages refer to the time immediately before and after the mob invasion of the Tuileries on

the 20th of June, 1792 .-

While such were the petty interests that pre-valled in the Ministerial circle, beyond it everything was rushing down to the inevitable catastrophe of final dissolution. It is, indeed, one of the most notable phenomena in History . . . that in so critical a state of things no power should have risen with energy sufficient to gain the command of events, and to impart life and vigour to the perishing monarchy. But it lay in the nature of this unexampled process of political annihilation, that while the consciousness of the nullity and untenable character of the extant state of things brought the prospect of utter ruin continually and positively before every eye, there arose in no quarter any clear perception as to what should be constructed, in a positive, defensible, and lasting manner, upon the fall of the old system. The creative, the conservative elements, had lost all their force,-the spirit of Negation and of Destruction had gained unlimited sway. This was the curse of an impotence which for some years past had been fighting a miserable and useless battle with the all-destroying force of the Revolution.

Of that force, the Jacobin Club (June, 1792)

was now the visible organ,-

and continued to be the real focus of political activity, the lever of the all-prevailing Revolutionary movement. In proportion as the administrative power sank lower and lower into weak inaction, as the feebleness of all other parties grew more con-temptible, in the same proportion did the Jacobin Club gain increased power, by the consistent tenacity with which it succeeded in repelling all attacks threatening its existence, by its widely ramified organization, by the necessity of a leading force, which, in the total break up of established relations, fell of itself at last to that body. It had become a power in the State, which derived a right, as it were, from the very fact of its existing on the ruins of the Monarchy, - and also because a continuous resolute activity gave it assurance for the future, at a time when all else was hopelessly rushing towards destruction.

Of the pitiable King, of his intriguing Court.

and of the self-deluded Royalist party,-each taking a way of its own, and all a wrong way,
—it is needless to borrow the Professor's characteristic descriptions. That these actors in the terrible drama were from first to last in a hopeless, because false and mistaken, or perverse, relation to the circumstances of the time -is now universally seen and admitted. We may therefore proceed to consider the principle that, for a time, gave to anarchy the upper hand in this contest, and that produced the effects of which the preceding extracts describe some salient phenomena.

Effectual power in any great political move-ment will after all be found in the end coincident with supreme right; or, in other words, with the true exigencies of the case;—and that element only will finally prevail which takes the lead in the direction which they inexorably prescribe. Such was the destiny or office of the political element embodied in the Jacobin Club,—such the secret of its growth and ulti-mate supremacy. Whatever the motives of its members, its fluctuating materials, its odious agencies,—it was ever—as an organic whole— pressing on the great issue of the time, and so acting in harmony with its intrinsic law; while its several opponents, in their various degrees and proposed ends, were all discordant with it

-were all trying more or less to evade or to annul it.

The work for which the fiat had gone out was hateful enough. It is no delicate office to cleanse an Augean stable. We must consider the state of things which met with such rude handling. Old abuses of power and privilege,—depraved morals,—a wicked church,—iniquitous law, these had swelled the measure of evil until it ran over. Famine and bankruptcy, the normal scourges of State vice, fell on a society where unbelief, disloyalty, and selfish, sensual levity festered in the upper ranks,—brutal ignorance in the lowest,—indignation and mutiny rising between them; -each and all in a ferment incapable of natural fusion by any political alchemy whatever. The season for amendment was over; there could be no revival of social growth until the field had first been cleared of the rank incumbrance which everywhere covered it. A terrible task this, no doubt, when the being of a whole nation is in question : -and it is a fixed law of the case, that the violence without which no such change can be, is itself an offspring of the abuses that make change necessary. This it is important to keep in view—in regard to the definition of Power as the equivalent of Right. The right here plainly lies in the necessity of the act, as pronounced by the infallible law of nature;—and is not affected by the instruments destined to execute it. These may be abhorred, or excused as the executioners; but the national doom which they are made to fulfil is visibly a just sentence, because in entire accordance with demonstrable Right.

All revolution bespeaks some evil past the remedies of usual law; and its first action is inevitably destructive. It was the misfortune of France that she had so much to destroy:—the canker had eaten too deep into the body politic to be salved over or to be cured by gentle means. For her the question lay between dissolution and the knife. Under an operation so fearful, where there is strength left to bear it at all, the reactive paroxysms must be appalling. The struggles of a great nation under such torture can have no regard for what is orderly or merciful. We may rather wonder that France could survive the spasm, than marvel at its

violence.

Nor is such a crisis, after all, the worst that can afflict a nation, when long and deeply diseased. It is, indeed, the only means by which the evil, when over-ripe, can be cast off so as to allow of a nisus towards recovery, and there must still be intense vital force in the body to make it and live. There is a worse issue than this for deprayed communities; -when ages of vice have destroyed the power of even convulsive action:—a state of helpless decomposition, in which they lie prostrate under oppressions to which their own sins have condemned them, impotent either to endure or to resist:—
"schiavi ognor' frementi."

From the point of view thus taken, it will be seen that nothing but failure could result from the efforts made by recalcitrant parties, whether the energy made by recalcular parties, whether to turn the fatal course of events, or to arrest it at any point short of the goal. And also, that the intrinsic character of such attempts, whatever the possible motives of individuals, was virtually perverse and fallacious. All proceeded alike on misapprehensions of the real issue; and so not only erred in the choice of expedients, but even found it impossible to carry these into full effect. The degrees of misunderstanding were various, as were the motives,—but these, the selfish, blind, or base, as well as the more generous and sincere, all laboured under the common disadvantage of a false relation to the vital conditions of the case; and all, in turn,
—plotters for counter-revolution, constitutional monarchists, dreamy speculators, venal adventurers, moderate and philosophic republicans,—fell in a vain strife, which their impotent endeavours merely served to exasperate. History of the Jacobin Club' includes the progressive developement of this supreme fact in all these several elements of resistance; attracting whatever it would assimilate in each, and throwing off and destroying the residue. Nothing, in short, is clearer in this history than the fact that France had reached a point where there was no standing on any other ground than that which the real body of the movement unconsciously took at the beginning, and by degrees came to occupy with open and decisive conviction

To explain this process by the casual acts or omissions of parties or persons,-as if some dexterous measure taken here, or a resolute dexterous measure taken here, or a resolute stand made there, would have given the whole business another character,—will, on considera-tion of the elements to be dealt with, appear but a shallow conjecture. The means for any adjustment within the scope of such possibilities were wanting; the state of general decomposi-tion, in which the Revolution was the last critical ferment, made it impossible to recompose a sound fabric by any partial adjustment of forces until the process of total change had first been completed. It may be said-had the King been wise and resolute, the aristocracy generous and prudent, the liberals patient, moderate and united, the army firm and obedient, the people amenable to law and tolerant of present sufferings in the hope of future reform,-in other words, had there existed the qualities required to make the suggested alterations practicable, the Revolution might have been led into a course of order in this or that critical moment of its history. But on no lower terms could the contingencies in question have been realized; and it was precisely because these conditions were not in being that there was a bloody revolution instead of a peaceable reform. At whatever stage of the business, proposed on whatever scheme, the theories of a modified crisis are tested by weighing the means indispensable for their appliance: it will be found that they must have failed from the want of fit materials to act upon. Mirabeau himself-the man of all men, if there were any—who might have mastered the storm, was unable to gain any firm command

over it; and found his vigorous plans defeated by the want of the hands to work them, even during the plastic stage of the Revolution: and he died aware that his further efforts to stem the course of anarchy could have effected

nothing but his own destruction.

It is to be observed, lastly, that the Reign of Democracy is not the ultimate fact in this passage of history,—although it is usually so read, not by the vulgar only. That the execution of the doom of eternal Justice upon a system grown utterly false at heart, should proceed through the republican idea, and be effected by the hands of those whom the ancient system had most wronged, lay in the particular circumstances of the case,—but rather as an accident than as an essential rule. Popular revolt, sustained by insurrection of the lower classes, is from obvious causes, a frequent mode of revolutions; but it is not their sole or indispenable mover, as some of the greatest—our own above all—have attested. The French Revolution, after all, produced none of the various whether "philosophers," "patriots," or populace. They sought, each in their particular way of hope, the attainment of certain positive ends: while the single result, which it was actually their lot to effect, was a negative one,the destruction, namely, of an inveterate mass of abuses, which had been "tried in the balance and found wanting." The Democratic prize the "liberty, fraternity and equality,"-for which so many contended, escaped their grasp at the moment when their triumph seemed complete; and the field was occupied by a power plete; and the field was occupied by a power for which no one had dreamed of preparing the way. All changes since then have alike shown that mere popular supremacy, in the extreme revolutionary sense, was not the permanent fact which the Revolution was destined to accomplish; nor is its moral to be read in any express. symbols of the pure Democratic creed. It is a great and decisive lesson of far wider import, -the proclamation, in characters of awful severity, of a rule of Supreme Justice, which visits accumulated wrong with accumulated

The greatness of this subject, and the importance of the work in which it is here illustrated, may excuse the length of our remarks. It is needless to regret the impossibility of giving more than a general character of Prof. Zinkeisen's book, or of dwelling on its various and interesting accessaries; since it is likely to take its place at once as a standard of general reference, and so will soon become familiar to all who are occupied in this department of history.

An Account of the Progress of the Expedition to Central Africa, performed by Order of Her Majesty's Foreign Office, under Messrs. Richardson, Barth, Overweg, and Vogel, in the Years 1850, 1851, 1852 and 1853. Consisting of Maps and Illustrations, with Descriptive Notes constructed and compiled from Official and Private Materials .- African Discovery: a Letter addressed to the President and Council of the Royal Geographical Society of London. By Augustus Petermann. Stanford.

As Mr. Petermann justly observes, anything published respecting the results of the African Expedition, before we are in possession of the whole of Dr. Barth's materials, must necessarily be of a fragmentary character. In the mean time the geographical information, more or less precise, hitherto acquired, is a fair object of public curiosity, to which accordingly the present publication aims at giving temporary satisfaction. Numerous documents, in great measure still unpublished, have been sent home

gentle

seems to have had free access. His publication, which is costly in character, appears to have been carefully got up, and is published under the sanction of the Foreign Office. It contains the sanction of the Followship of the three maps: one, surrounded by illustrative portraits and sketches, embracing the whole of that portion of Africa extending from the Regency of Tripoli on the Mediterranean to the latitude of the Bight of Biafra and the mouths of the Kowara; a second, showing the progress of the first Expedition as well as that of the recently-departed auxiliary, Dr. Vogel, as far as the southern limits of Fezzan and Ghat; and a third, like the first, in some respects conjectural, exhibiting the results of the explorations of Drs. Barth and Overweg, in that extraordinary cluster of Black kingdoms which stretches to an unknown distance south of the Great Sahara. For the construction of the frontispiecemap, besides previous materials, the published account of Mr. Richardson was available, in addition to the correspondence of his German colleagues; the observations of Dr. Vogel form fixed points by which the second is cor-roborated; whilst the last is chiefly based, it seems, on the map and notes sent home by Dr. Barth, with some assistance from the journals of Mr. Richardson and the letter of Dr. Overweg,-both of which travellers, as our readers

are aware, have fallen victims to African disease. Assuming this map of Central Africa to be generally correct, wherever it pretends to be based on positive information, which we are bound to do, it must be considered a valuable addition to our previous knowledge. One of its chief features is a route direct south from Kuka, the capital of Bornu, near Lake Tsad, to Yola. the chief place of Adamana, a country not pre-viously visited or described. On this route, which extended to below the 9th degree of N. latitude, Dr. Barth crossed the great river Benue, supposed to communicate with the Kowara,—forming, in fact, the upper course of the Chadda. Other routes, all radiating from Kuka, penetrate in various directions into regions for the most part never before laid down on maps from anything but the vaguest reports—as Bagirmi, beyond which, on the north-east, lies the extraordinary kingdom of Wadai; Musgo, on the direct, but perhaps not most practicable, route to the Indian Control Pales. route to the Indian Ocean; Baber and Kerre-kerri, border provinces of Bornu to the southwest; and Kanem, a district to the north of Lake Tsad. This lake, with its islands inha-bited by Pagans, is sketched from the reports of Dr. Overweg.

It is obvious that we must not expect from these new maps, containing routes of many thousands of miles, journeys over some of which have only once been performed, all the exactitude of an Ordnance survey; and it is to be expected that numerous rectifications-especially in cases where reports of natives with flexible ideas of time and distance have been relied on-will ultimately be necessary. So far as they go, however, they will prove valu-able to all interested in African discovery, whether their chief attention be directed to the advance of geographical science, or to the important question of the spread of civilization in a region which has hitherto been the domain of barbarism and ignorance. To illustrate his maps Mr. Petermann gives us an elaborate analysis of the progress of the Expedition, taking advantage of the ample materials for the early

and corrected testimony, to be put in possession of far more satisfactory information; but for the present we must accept this laborious 'Account, -published with an admission that it must some day be superseded,—as the completest contribu-tion to Central African geography which we

The Stratford Shakspere. Edited by Charles Knight. Vols. I. and II. bound in one. Life of Shakspere, Tempest, and Two Gentlemen of Verona. Hodgson.

As we have many different kinds of Poets, so have we many different kinds of Editors. The "matter-of-fact editor" is a gentleman who admits nothing until he has book authority for it. He thinks the poet even such a creature as himself. Fancy and imagination are qualities which he does not comprehend. He only comprehends lines, rules, facts, figures. He regards the products of genius either as the result of mere caprice or of mechanical activity. The "pedantic Editor" is perpetually running off into the classics, or into some less familiar re-gion of literature, in illustration of every line and thought, every trope and illustration. He thinks we can never understand an author of our own country-of our own fertile soil and passionate blood-until we know that he agrees with some observer or notable writer of Greece or Rome, of Scandinavia, or the far East. There are many other kinds of Editors, with a description of which we will not now afflict our readers. The class to which Mr. Knight belongs may be distinguished as that of "the genial He never, for an instant, forgets that his author was a poet. He dwells with delight upon the proofs of his genius. He brings forth to observation the highest evidences of his power. He evidently loves and reverences both the poet and his works, and it is his ambition to make everybody entertain the like feelings with himself. To the general public Shakspeare is never so delightful, his beauty never so obvious, his mighty mastery over the realms of nature and invention never so striking, the wild luxuriance of his fancy never so glorious, his depth of passion never so sublime, as when these qualities of brain and heart are set before their intellectual vision by such a critic. Every one who values Shakspeare, or desires to see him dressed up with the care that loving hearts can imagine and loving hands bestow, should buy this cheap, portable and beautiful edition of his works—the very title of which is an agreeable attraction. It has the advantages of being published in the most convenient of forms, at the cheapest of prices—one shilling per volume—and also of being printed and illustrated with all the care and knowledge which result from a life-long study, under the guidance of an intense, but by no means of an indiscriminating, admiration.

Remains of the Late Edward Copleston, D.D., Bishop of Llandaff: with an Introduction, containing some Reminiscences of his Life. By Richard Whately, D.D., Archbishop of Dublin. J. W. Parker & Son.

This is a volume which will interest all reading and thinking men; though, looking back to the biography of the Bishop of Llandaff by Mr. Copleston, published in the year 1851, and to the want of matter which was therein apparent [vide Athen. No. 1235], it must be regretted that its substance was not incorporated into the want of matter which was therein apparent [vide Athen. No. 1235], it must be regretted that its substance was not incorporated into the want in the control of matter and the control of the control advantage of the ample materials for the early portion supplied by the journals of Mr. Richardson, and for subsequent transactions relying on the reports and letters forwarded by Messrs. Barth, Overweg and Vogel. We may hope at a subsequent period, should the two adventurous gentlemen, whose lives have hitherto been to the manual control of the want of matter which was therein apparent [vide Athen. No. 1235], it must be regretted that its substance was not incorporated into the memoir, instead of appearing by way of supplement. The time and form selected by Archbishop Whately inevitably give to his "Reminiscences" a certain explanatory, "And some such is still made—Eb."

And some such is still made—Eb."

to this country; and to them Mr. Petermann | spared, return to afford us their well-weighed | apologetic, controversial tone, which, besides rendering them incomplete in themselves, and constantly taking attention back to the former Memoir, makes uneasy reading-(we know not how better to express ourselves). True it is, that most of the subjects of the Archbishop's "Reminiscences" are vexed questions of religious discipline, State regulation of morals, collegiate government, and the like :—in regard to which he is honourably anxious to make clear the views expressed, and the part taken, by Bishop Copleston, as a tried and true friend should do. Since it is hardly possible to touch any of these topics without being tempted into annotation, protest,—controversy, in short,—we must hand the "Reminiscences" over to those whose more immediate function it is to weigh, to argue, and to discriminate on the Maynooth grant,—on the Hampden heterodoxy (so called),—on the law of marriage with a deceased wife's sister,—on that schism (which seems to bystanders at once so significant and so frivolous) called Tractarianism,-and one or two other similar points of debate. The extracts from the Bishop's 'Common-Place Book,' which come next, will furnish good matter for special analysis, though the bulk is small; but they furnish, also, their quota for the general reader, as the following pleasant piece of inge-nuity (notes inclusive) will prove.—

"Elymology. —The affinity of words is by no means to be rejected because it is remote. If each step in the pedigree be clearly established, the connection is as certain as if it consisted of but one or two stages of descent. Thus Journal is undoubtedly derived from Dies. Dies, Diurnus, Giorno, Diurnal, Journal. Lord Clarendon, in his Life, uses Diurnals in the sense of Journals. The Arches is a vulgar name with seamen for the Archipelago, which is itself a corruption of αίγεῖος πέλαγος (Mitfrom Chartreuz; Postmaster, at Merton College, from Portionista. These corruptions are similar to those in daily use among our seamen, when they assimilate the name of a ship to some word already assumulate the name of a ship to some word already familiar. Bellerophon, Bully Ruffian; Bienfaisant, Bonney pheasant. So Bologne Mouth, Bull and Mouth; Belle Sauvage, Bell and Savage. This is an important principle for the Etymologist to notice. It solves many phenomena in language. E. g. Bridgewater, a town in Somerset, is corrupted from Briagewater, a town in Sometset, is corrupted from Walter de Burgh; Sparrow grass from Asparagus; Cowcumber, from Cucumis; Biscakes from Biscuits; 'please the pigs,' from 'please the pix,' or sacred box in which the host was kept; country dance, from contredanse.

Quelques choses ... Kickshaws, Hoc est corpus Hocus pocus. Another guise Another guess. Sucre Brulé Barley sugar; and yet the French say sucre d'orge.* Buffetier Beefeater. Euripus Egripos, Negropont. Oyez O yes!

Chaussée Causeway.
Il Janitore... John Dory.
Girasole Artichoke.. Jerusalem Artichoke.
Chacal Jackall.
Toad-eater, from the Spanish todito, a familiar

diminutive of todo (toto), one who does everything for you—a fac-totum+—a frequent member of the Spanish household. The word ta panta (τὰ πάντα) was the name for a similar personage at Rome. (See Petronius.) Hence, too, the universal corruption which once prevailed in our language of the old genitive case. 'The King his' for 'Kingis,' &c.

" * Originally it was barley-water, sweetened with sugar (a common remedy in coughs) boiled down to an extract. And some such is still made.—ED."

This was at length so established as to give rise to a further corruption, her being substituted, in the case of a woman for his. An example of this principle that, if we set out wrong, superior talents and learning only lend to greater error. Optimum quod-que corruptum fit pessimum. Hence in MSS. an ignorant copyist, though he wrote a word without meaning, or perhaps no word, was often nearer the original than a more learned scribe, who, dissatisfied with a corrupt and unmeaning reading, changed it to one that had at least some meaning, though not the true The proneness to assimilate an unknown word to a known one is visible in MSS., and is the source of many errors. The ancients seem to have been more careless in etymology than in any other subject of human research. Wherever any similitude strikes Aristotle or Cicero, for instance, between the sound of two words, which have also some affinity in meaning, however remote, they do not scruple to pro-nounce that the one was derived from the other, especially if such an etymology tends to illustrate or confirm their argument. Thus Aristotle ('Nic. Ethic.,' b. v.) derives σωφροσύνη from σώζειν την φρόνησιν: in another place ήθος from έθος.‡ But the most remarkable collection of these forced and arbitrary derivations, founded on no principle, but merely resemblance of sound, is at the end of his work De Mundo, the whole chapter περὶ τῶν τοῦ θεοῦ ὀνομάτων. The Stoics were specially remarkable for such etymologies. Thus also the Greek Fathers derived pascha, which comes from the Hebrew signifying passover, from πάσχειν, because then Christ suffered. (Chrysostom, Hom. 4, in. 1, ad Tim.) So did Irenœus, Tertullian, Lactantius, and Gregory Nazianzen. Augustine derived διάβολος from δic and βόλος. (See Edwards 'On Truth and from εic and βόλος. (See Edwards On Truth and Error, p. 191.) 'That unspeakable spirit of absurdity which always came over even the most sagacious Greeks and Romans the moment they meddled with etymology.' (Niebuhr's 'Rome,' vol. i. p. 18, translat, 1828.) The same idea had often struck me. It was not till the commentators on Shakspere and H. Tooke investigated the English language in its rude state, and traced its changes, that the great importance of authorities in etymology was known. Thus Warburton explains Morris-pike in Shakspere, by Maurice-pike, because Prince Maurice being the first general of the age, the weapon took its name from him. Farmer, however, found the very word in the same sense in writers long before Prince Maurice; and it is certainly a corruption of Moorish pike, as Morris-dance is of the Moorish dance.

Following the extracts from the 'Common-Place Book,' Archbishop Whately has here collected and published thirteen sermons and two lectures by Bishop Copleston,-enriching the volume with accompanying notes and considerations of his own : and thus adding another to the outpourings of a full and active mind, with-out, it should be added, any undue interposition of himself betwixt his subject and his reader. From one of these sermons, that on 'Christian Liberality,' we must draw a passage, with which we have been struck, as a sensible and calm statement of a matter in which both Art and charity have been dragged awry by the humour of the time.-

"I proceed to the consideration of that pleasing branch of church service which calls in the aid of music, and makes that divine art subservient to the ends of devotion. In this respect, too, the wisdom and the moderation of our Reformed Church are strikingly exemplified. Instead of rejecting this auxiliary, and confining its province to the singing of psalms and hymns by the whole congregation as was the wish of the Puritans, and as is the practice of nearly all the Reformed churches of the Continent, we have wisely retained both vocal and instrumental music, cultivated and refined by professional skill, as an useful and edifying part of public worship. Careful indeed were our first Reformers, and careful ought we to be, not to suffer it to encroach beyond its proper province, which it is always prone to do, if not kept under due control; careful not to let it become a mere display of skill, or a gratification of the taste of the hearers, or an occasion of critical

study and emulation; but entirely conformed to the spirit of our religion, conducive solely to devotional feeling; the handmaid and not the rival, much less the mistress of a liturgy. Even in this restricted province there is large opportunity given for the cultivation of the art, and for the adaptation of it to the character and circumstances of the congregation. In a remote village and in a crowded town we should not desire to have precisely the same choir. In general, I should say, that some parts of this accompaniment might be addressed merely to the excitement and the direction of devotional feeling; while other parts, and those, perhaps, the most considerable, ought to be such as would assist only, and encourage, and regulate the singing of the whole congregation. and regulate the singing of the whole congregation. This latter object is at least equal in importance, if not superior, to the former. Neither of them ought wholly to supersede the other; but if we are driven to the alternative of chusing between them, I have no hesitation in saying that congregational singing should have the preference. Even this, however, may be greatly improved and encouraged by a due exercise of the other. 'I will sing with the spirit, and I will sing with the understanding also,' is a sacred principle. Without this, the music of the church rises not above the music of the theatre. It may refine, and exalt, and purify our affections, but it will not aid the preaching of the Gospelsometimes it has been known to interfere with it; but, kept in due subordination to that principle, it may become, and it often has become, a powerful condjutor in the cause of pure religion."

We would have all whom Chants Gregorian and 'The Psalter' concern lay to heart such passages as this, and such teachings as are to be found in the Rector of Liverpool's Lectures, since the truths they contain and indicate may carry their common sense unharmed through the midst of "that sound and fury' have been conjured up on the subject.

OUR LIBRARY TABLE.

Nannette and her Lovers. By Talbot Gwynne. (Smith, Elder & Co.)—'Nannette and her Lovers is a carefully written story, with no slovenly scenes or ill-proportioned incidents; and it is on the whole a trim, well-executed piece of literary's work. Placed, however, beside Madame Sand's 'Petite Fadette' and 'La Mare au Diable,' the difference between them and the work before us is at once felt. 'Nannette and her Lovers' does not come up to their mark,—the poetical element is lacking: it is a clever story, but it suggests nothing more than what it tells. The scene is laid at St. more than what it tells. The scene is laid at St. Elog, in Normandy, at the period of the first Revolution, 1793, where a band of revolutionary patriots make a midnight inroad into the neighbourhood,-burn the château-murder the priest at the altar—and carry away a number of victims for the guillotine. The whole of this night scene is remarkably well done: the last moments of the parish priest is the most effective and touching incident in the book. Poor Nannette's innocent hopes and prospects in life are all swept away: she was on the eve of marriage, but priests and marriage are abolished, and she will not listen to a civil contract. A requisition for all the unmarried men to serve for soldiers comes to the village, and her marriage is further off than ever; for not only Antoine, her betrothed, is taken away, but along with him Arsène Potier, who has been secretly in love with her all his life, -and who deserves her a great deal better than Antoine, if in matters of love any favour went by merit. Nannette's simple fidelity and earnest desire to act up to all the good old curé has taught her, make the charm of the She remains at home in hard labour. poverty, and an unwaning love to Antoine, hoping only for the period when the priests will be stored that she may be married to Antoine. worthy, however, soon shows the stuff he is made of; and the gradual development of the flashy, worthless military scamp out of the innocent-seeming rustic is extremely well done. There are spirited descriptions of a soldier's life of that period : indeed, all the details are very cleverly got up, Of course, in the end, Nannette is delivered from

the misery of loving a man so exceedingly worth-less, and marries Arsène, and lives as happily as she has deserved. The true retribution, which makes a man reap as he has sown, overtakes Antoine. All deductions made, our readers will find

this a story worth reading.

The Lamplighter. (Clarke, Beeton & Co.)—
Here we have another American reprint, issued under a fine flourish of trumpets. It is written somewhat on the model of 'Queechy' and 'The Wide, Wide World,' but it is of inferior quality to those works. The first hundred pages, giving a picture of "Gerty's" miserable childhood with Nan Grant,—her rescue by Uncle True, the Lamplighter, who adopts her,—is lifelike, and good of its kind. But when it becomes necessary to put Gertrude through her paces as a regularly bred heroine, the story falls off, and becomes both feeble and commonplace. Gertrude, "in a beau-tifully-fitting dress of spotted muslin, which displayed her taper waist to advantage," is one of those diluted angels so plentiful in semi-religious novels. The incidents and properties have all been used threadbare in the service of the Minerva Press in England. There are misunderstandings, productive of dreadful misery,—half-heard conversations, which complicate everybody's business,and parties reported to be dead, who are alive and well. There is a second good heroine—of the crushed Lilly genus-in close friendship with Gertrude, and they lead a persecuted life together under the lady's step-mother and her daughters,until the tide of things turns, and Good Fortune has time to reward their virtue. Gertrude finds her father, and a large fortune, and marries the man she has loved from childhood; whilst her friend, who was supposed to be in such fragile health that she had only a little while to live, health that she had only a little while to live, marries her early lover, from whom she had been estranged, and who is no other than Gertrude's father himself! Everything is cleared up—and explained—and forgiven, whilst an unlimited allowance of barley-sugar felicity is bestowed upon everybody. The style is full of Americanisms, whilst there is an effort after a faded European conventionality, which gives it an air like a seco hand ball-dress. If the author would eschew all this finery, he might write a book which would be

good from the beginning to the end,—and such as we should be glad to read.

The Art of Cleaning, Dyeing, Scouring, and Finishing on the most approved English and French Methods. By Thomas Love. (Longman & Co.)— Until we read this book, we had no idea of the importance of the London dyer ;-for we are told that there are above three thousand master-dyers within ten miles of St. Paul's, whose business it is, among other matters, to re-dye vast quantities of ladies' dresses which have been injured by exposure in the handsome shops of our metropolis. with others mildewed, or damaged by shipwrecks and fires, and a variety of other causes, are all sent to be cleaned and re-dyed, to sell as new. Under these circumstances, it is evident that a good practical treatise on the Art of Dyeing must be valuable. Of such a nature is the present work, and the writer has had the advantage, not generally enjoyed by authors of practical treatises of testing by actual commercial experience the various modes of dyeing which he recommends.

New *English-Italian and Italian-English Dic-

tionary – [Nuovo Dizionario Inglese-Italiano ed Italiano-Inglese]. By John Millhouse. (Rolandi.) -A medium between the pocket and the large dictionary, containing all the words that are in general use, with a good supply of idiomatic phrases. It is adapted to the actual state of society, with all its most recent improvements. Hence it includes such words as steam-engine, steam-boat, railway, electric telegraph, &c. in the varied combinations which they help to make up. Mercantile terms and phrases are also given and correctly rendered, which is a great convenience. The English-Italian appears to us inferior in exe-cution to the Italian-English part,—indeed, the English throughout needs careful revision. This is a point of less consequence to Englishmen than others, because they are in little danger of being misled, but even for them it is a drawback, while

to foreigners it is a serious disadvantage. We wish the English and Italian had been printed in different type, that the reader might more readily distinguish the one from the other at a moment's glance. It is right to mention that the price of the work is moderate, considering its size.

Modern Husbandry: a Practical and Scientific Treatise on Agriculture. By G. H. Andrews. (Cooke.)—In the ardour of men of science to apply their discoveries to practical purposes, there can be no doubt they frequently overshoot the mark, and promise to themselves and others what never can be realized. The practical man is thus often deceived, and he turns from science with disgust, and falls back upon the empirical practices of his deceived, and he turns from science with disgust, and falls back upon the empirical practices of his business or profession with the belief that science can do nothing for him. But what, after all, is science but knowledge? and all knowledge must in the end be beneficial in every branch of human industry to which it is applied. Thus it is that a candid critic, looking on at the mistakes of the philosopher and the obstinacy of the practical mm, can still discern advancement as the result of knowledge. No department of human industry pages destrict on the profession of the practical mm, are selected to a profession of the practical mm, are selected to a profession of the practical mm. more clearly exhibits this than that of agriculture. In spite of the absurd visions of increasing plenty held out by the chemist, and the dogged adherence to old and ignorant methods of procedure on the part of the farmer, our farms are being improved. Land that a few years ago was barren, now yields a profitable return for the capital and intelligence exercised on its culture. Two blades of grass grow on many places now where twenty years ago only one could exist, and with this a double quantity of stock is kept on the same spot. That the methods by which these desirable results have been obtained oan be communicated, is proved by the multiplica-tion of Agricultural Societies, Farmers' Journals, and a literature exclusively devoted to these suband a literature exclusively devoted to these subjects. The present volume, by Mr. Andrews, is devoted to the detail of the improvements introduced into modern husbandry. It commences with a chapter on the geological nature of the farming districts of England, showing how the soil must be influenced by the geological formation it covers. He then passes on to the various details of farm management. In his remarks on the management of crops, the feeding of cattle, and the nature of manures, and other details, he displays a very sound acquaintance with modern science in these departments of agriculture. But whilst alluding sound acquaintance with modern science in these departments of agriculture. But whilst alluding to the results of scientific research, his book is not intended in any way to teach the abstract principles of science. It is a thoroughly practical book, and one that cannot be read by the young farmer without considerable advantage. It is illustrated with woodcuts of animals and rural scenes, which are not merely useful as assisting the reader to understand the text, but are really very pretty

inderstand the text, but are really very pretty pictures by first-rate artists.

Thucydides, Book VI., from the Text of Bekker.
With Notes chiefly Grammatical and Explanatory. By the Rev. Percival Frost, Jun., M.A. (Cambridge, Macmillan & Co.)—The object aimed at by Mr. Frost is one of paramount importance, though not commonly appreciated as it deserves. He endeavours to promote strict accuracy of translation.—the intellectual processes involved in this He endeavours to promote strict accuracy of trans-lation,—the intellectual processes involved in this acquisition constituting, in his opinion, one of the chief advantages of the study of Greek. For this purpose he bestows especial, and indeed almost exclusive, attention upon the explanation of par-ticles, the force of compounds, the different shades of meaning converged by different tenses and forms ticles, the force of compounds, the different shades of meaning conveyed by different tenses and forms of the same verb, the various significations of prepositions according to their construction, and other matters which experience has convinced him need explanation to prevent mistake. All this he has done in a highly satisfactory manner, not merely stating the force of prepositions in composition and particles in certain phraseological combinations, but pointing out how they come to have this force, which is much more useful to know and much more difficult to learn without assistance. His more difficult to learn without assistance. His translations of passages likely to be either slurred over or misunderstood are admirable exemplifications of that accuracy which he endeavours to assist the reader in acquiring. If there be any fault in this edition, it is that it is too exclusively

even if he did not give them any great prominence.

In its present form, it is too much of a mere school-book, containing many things to be found in ordinary grammars and lexicons, and not enough of other materials to be of service to a youth who has had a grammar-school education.

A Practical Grammar of the German Language.

By L. M. Tushmann. (Simpkin, Marshall & Co.)
—In the sense of being unscientific this may be called a practical grammar, but we doubt whether it is likely to be of much use in practice. If some it is likely to be of much use in practice. If some grammars are, as the author seems to think, overladen with rules and exceptions, this is certainly deficient in them,—indeed, they are all but entirely excluded. Examples without rules are worth very little. We defy anybody to learn German well from such a grammar as this alone. Yet it may be used with advantage in connexion

Yet it may be used with advantage in connexion with a systematic work explaining the principles of the language. The conversations and commercial correspondence are good.

Among the numerous aids to a knowledge of French which are constantly issuing from the press, the Introduction to French Prose, by C. L. Lasegue, deserves a passing notice as a useful manual. Another little educational work which may be employed with advantage in the instruction of records. ployed with advantage in the instruction of young pupils, is Chapters for School Reading and Home Thought.—The Manual of Method, for the Use of Teachers in Elementary Schools contains many hints worthy the attention of those for whom it is deworth the attention of those for whom it is designed.—It is beyond our province to say more of Compitum, or the Mecting of the Ways at the Catholic Church, than that it is a discursive defence of the Monastic system, interlarded with quotations from every variety of source—Scripture, the ancient Fathers, the classics, and modern works in prose and poetry, good, bad, and indifferent—in almost as great abundance as Burton's 'Anatomy

of Melancholv. Among the small publications before us, bearing on the events of the day, is a stirring sermon, en-titled England, Turkey, and Rome, preached on the embarkation of the Guards for the East by the embarkation of the Guards for the East by George Croly, LL.D.—Mr. Constantine Simonides publishes the Panegyric of that Holy, Apostolic, and Heaven-crowned King Constantine the Great; composed by his Head Logothetes Constantine Aeropoliti; faithfully copied from the MSS; and, having dedicated his work to those who "bear him no good will," boasts that it is an accurate transcript of the original including all its crows area the of the original, including all its errors, even those of punctuation.—A considerable number of pamphlets discuss one of the most important questions of the day, Education. The Rev. George Jamieson in his Education Question Philosophically and Practically Considered in its Bearing upon Indi-Practically Considered in its Dearing upon Individual Development and Social Improvement defends the interests of the Church with a disagreeable affectation of philosophical language.— A similar topic is far better treated by a "Practical Educator" in a letter On the Parochial Schools of Scotland : their Past and Present State. - Dr. Roth, in a letter to the Earl of Granville, maintains the Importance of Rational Gymnastics as a Branch of National Education and as a Means of Elementary Instruction.—The monitorial system of Harrow Instruction.—The monitorial system of Harrow School forms the subject of two pamphlets—A Few Words on the Monitorial System, by One who was once a Monitor,—and Observations on the Abuse and Reform of the Monitorial System, with Letters and Remarks, by the Earl of Galloway.—Other questions of the day are elucidated with more or less success in The Religious Disabilities of our Catholic Primages considered, with a View to their Catholic Prisoners considered, with a View to their Removal, in a Letter to the Viscount Palmerston, by Frederick Oakeley, M.A., Visiting Priest at the Model Prison, Pentonville, ably and temperately written.—The Electoral System as it might be; or, a Final Measure of Electoral Reform for England and Wales, by Ernest Lucy, calling for no particular comment as it is not likely to attract the attention of statesmen, - Thoughts on the Proposals

grammatical. We cannot suppose the editor would wish Thucydides to be studied in so narrow a spirit as he is here treated. No doubt he would refer the student to other works for historical, geographical, and political observations, but we think he ought to have included these matters in his own, even if he did not give them any great prominence. In its present form, it is too much of a mere school-book, containing many things to be found in ordinary grammars and lexicons, and not enough treditably perseveres in his attempts to find a stempts to find a reditably perseveres in his attempts to find a Differences, No. II., in which Mr. Luke Hansard creditably perseveres in his attempts to find a settlement of this difficult question.—Mr. Robert Owen, also, perseveres in giving out the light, which the world will not see, in Part I. of The New State of Existence of Man upon the Earth: to which are added, an Outline of Mr. Owen's Early Life, and an Appendix containing his Address.—Quaintness and earnestness are the characteristics of Mr. Leonb Weight's New Manuel Carebilities of of Mr. Joseph Wright's Natural Capabilities of Man briefly considered with especial Reference to the Question of Husman Accountableness; containing Introductory Remarks on the Puro-Adamic State; which is all we can say for his production.—An anonymous writer in London the Subject of Fearful Prediction, contained in the Revelation of St. John, revenges himself for our resolve to humble the pride of Russia by understanding the Apocalypse against us. In spite of three warnings—the deagainst us. In spite of three warnings—the de-struction of the Houses of Parliament, of the Royal struction of the Houses of Parliament, of the Royal Exchange, and of the Armoury of the Tower—it appears that we persevere in our evil ways and are going to be destroyed. If we make heste and submit to the Czar, the writer will prove that St. John prophesied conditionally.—Table Talking and the Parsons, by the Fox of Ballybotherem, is a stire, without much point against the Church a satire, without much point, against the Church of England.—In strange company, we mention The Steady, Unmistakeable Signs of the Approach of that Deadly Scourge, the Choleru, four pages of useful and impressive warning,—An Attempt to show that Light, Heat, Electricity, and Magnetism are Effects of the Law of Gravitation,—Decimal Coinage, what it ought and what it ought not to be, by One of the Million,—Cretins and Idiots: a Short Account of the Progress of the Institution for their Relief and Cure,—Una Visita all Abenberg, 10 Settembre, 1850, by the Physician Sella Alessandro da Torino, also on the subject of cretinism. a satire, without much point, against the Church

dro da Torino, also on the subject of cretinism.

UNDER MY WINDOW.

UNDER my window, under my window,
All in the Midsummer weather,
Three little girls, with fluttering curls,
Flit to and fro together:
There's Bell, with her bonnet of satin sheen,
And Maud, with her mantle of silver-green, And Kate, with the scarlet feather.

Under my window, under my window,
Leaning stealthily over,
Merry and clear, the voice I hear,
Of each glad-hearted rover.
Ah! sly little Kate, she steals my roses,
And Maud and Bell twine wreaths and posies, As busy as bees in clover.

Under my window, under my window,
In the blue Midsummer weather,
Stealing slow, on a hushed tip-toe,
I catch them all together:—
Bell, with her bonnet of satin sheen,
And Mand, with her mantle of silver-green, And Kate, with the scarlet feather.

Under my window, under my window, And off, through the orchard closes; While Maud, she flouts, and Bell, she pouts, They scamper and drop their posies; But dear little Kate takes naught amiss And leaps in my arms with a loving kiss, And I give her all my roses.

T. WESTWOOD.

Brussels

ROBERT JAMESON.

THE position which Professor Jameson had occupied in the world of science for more than half a century was such, that an especial notice of his position, as a natural philosopher, is scarcely required. Since the death of Dr. Walker, in 1804, Robert Jameson filled the chair of Natural History in the University of Edinburgh, which by his death is again become the subject of anxious consideration to the younger naturalists; many of whom pursued their studies under the late Pro-fessor's guidance. Robert Jameson was born in Leith in 1773, he had at the period of his death consequently reached his 81st year. He was educated for the medical profession, which he appears to have abandoned at an early period for the study of Mineralogy. So ardently was this science pur-sued by him, that finding himself unable, in Scot-land, to obtain all the knowledge of a pursuit which was then assuming much importance under the directing mind of Werner, he placed himself the directing mind of Werner, he placed himself as a student at Freyburg, in Saxony, where he remained for two years. Werner had here established his school, and Jameson, under his guidance, and in companionship with Humboldt, became thoroughly imbued with the Wernerian philosophy, which he clung to amidst the conflicts amongst the disciples of the new hypothesis with much zeal, contractly developed his zero that the zero his ze constantly devoting his pen to the defence of his

master.

On his return from Freyburg in 1804, Robert
Jameson was appointed Regius Professor of Natural History in the University of Edinburgh,
Lecturer on Mineralogy, and Keeper of the Museum. To the duties connected with these important appointments Professor Jameson devoted
himself with all the zealous energy of an active
wind weith the infamilian of any companied himself. himself with all the zealous energy of an active mind, until the infirmities of age compelled him to a comparative repose. A distinguishing, and in those days, a most important and rare, feature in Prof. Jameson's mind, was its essentially practical tendency. This was manifested in all his works. We find him publishing, in 1798, 'An Outline of the Mineralogy of the Shetland Islands and of the Island of Arran, with an Appendix containing Observations on Peat, Kelp and Coal; and again in 1800 appended to his 'Outlines of the Mineralogy of the Scottish Isles,' we find a long account of the national value of these products. In 1808 Jameson published his 'System of Mineralogy, comprehending Oryctognosy, Geognosy, In 1808 Jameson published his 'System of Mineralogy, comprehending Oryctognosy, Geognosy, Mineralogical Chemistry, Mineralogical Geography, and Économical Mineralogy.' Under the operation of this practical mind a collection of Geological and Mineralogical specimens of the most complete character has been formed. This was a sacred store to Prof. Jameson, which he has for many years guarded with so much care, that for

the purposes of instruction it became almost use-Since it is determined to found a National less. Since it is determined to found a National Museum of Practical Geology and Agriculture in Edinburgh, this valuable—this unique—collection will now become available to the public, and form indeed an appropriate Memorial at the same time of the purely practical character of the man by whom it was originated and brought to its present state of completeness. All the specimens within the walls of the present Museum, and many thousands besides, have been arranged and placed thousands besides, have been arranged and placed by his own hands. The correspondence carried on must have been enormous before such a collection could have been brought together, and the expense could have been brought together, and the expense both of money and time very great. The vast collections of all the branches of natural history, not only in the East and West Museums, but stored up in the store-rooms are enormous. understand that there are nearly 40,000 specimens of rocks and minerals, geographically arranged; 10,000 specimens of fossils; 800 specimens of cra-nia and skeletons; 8,000 birds; 900 fishes and reptiles; 900 invertebrate animals—the collection of insects very large, consisting of many thousand specimens; 300 specimens of recent shells. The collection of drawings, casts, models, geological and geographical maps, and instruments used in the survey of countries, is very fine.

In 1819, Prof. Jameson, in connexion with Dr. (now Sir David) Brewster commenced the publi-

cation of The Edinburgh Philosophical Journal; which has been regularly published quarterly since that time. At the end of the tenth volume, Jameson became the sole editor; and he conducted it to the day of his death with great ability. As one of the organs of communication between the scientific world and the public, Jameson's Edinburgh Journal has always commanded a most important position,—the practical and popular character of his mind giving to this periodical a tone and colouring which was more agreeable to the multitude than that which ordinarily distinguishes our scientific literature. Prof. Jameson was the author of several other works on mineralogy and geology,—and numerous papers written by him will be found in the Wernerian Transactions and in Nicholson's Journal. He was a member of nearly all the scientific Societies of Europe, and of several in America. He owed these honours—the only ones in this country to which a man of science can aspire—to his earnest and practical character.

Prof. Jameson was practical—and anxious to be useful—in days when science and practice stood apart as if they were two repellent forces. He did much towards neutralizing these states,—and was one of the pioneers to whom we are indebted for that union of science and practice which is the prevailing topic of our own time. Let us hope, that the naturalist who may be selected to fill this important chair will be no less devoted to minister to the useful applications of the Natural History Sciences, without in any way sacrificing the higher office of a seeker after truth and an interpreter of Nature's mysteries.

ON BIOT'S DATES FOR THE REIGNS OF THOTHMES III. AND RAMESES III.

In the Revue Archéologique for February 1853 an account is given by M. de Rougé of some astro-nomical data collected by him from Egyptian monuments. They were submitted to M. Biot, and that distinguished astronomer calculated the periods indicated by the monuments, and has given the results to the learned world in Vol. xxiv. of the results to the learned world in Vol. XXIV. of Mémoires de l'Académie des Sciences. Sanctioned by such high authority, these dates have, up to this time, passed current, unexamined and unquestioned, as positive acquisitions to our stock of chronological knowledge. I cannot, therefore, refrain from stating on what grounds they appear to me equally unsound in their basis and inconsistent with kinterior probability in their application to with historical probability in their application to recorded facts.

They are unsound in their basis, because the date of the astral phenomenon referred to in the inscriptions—the heliacal rising of Sothis—is computed for the latitude of the place in which the

monument was set up, as if the monuments them-selves were memorials of a local astronomical obselves were memorials of a local astronomical ob-servation; whereas they are nothing of the kind. That of Thothmes III., the Calendar of Ele-phantine, is a notification of the movable civil calendar day, Epiphi 28, on which the festival of the "Manifestation of Sothis" fell due at the time. It is, therefore, partly a chronological and partly a liturgical memento. To calculate the date of such a coincidence by the local latitude of the monument is a refinement of scientific precision which in the present instance defeats its own purpose, because it is at variance with the well-authenticated practice of the ancient Egyptians in dealing with sidereal or liturgical elements of chronology. All the notices of the Sothic period which have reached us from antiquity, namely, those of Theon of Alexandria, and of Censorinus, the concurrent dates of the Roman time, and of Ptolemy's Astronomical Canon, are unanimous in assuming, for the initial point of the cycle, the phenomenon as observed in the latitude of Heliopolis. nomenon as observed in the latitude of Interpolas. The day given is July 20th, o.s.—the periods, B.C. 1325 and A.D. 136. This result is considered to hold good for all Egypt, though it is physically true only in the Delta. Common sense would lead us to look for the practice we thus find proved as fact. For since the heliacal risings of stars, on stated days different according to latitude, formed the basis of the Egyptian method of marking time and regulating feasts, a fixed standard of latitude to which the priests could reduce all local observato which the priests could reduce all local observa-tions relating to that method, must have been as necessary to its precision and its consequent utility in ensuring religious uniformity, as a like fixed standard of longitude is necessary to our astro-nomical and geographical operations. Do we insert observations made at Edinburgh or Ply-mouth in the 'Nautical Almanac' without first adapting them to the standard of the Royal Obseradapting them to the standard of the Royal Observatory at Greenwich? Is the longitude of overy county map reckoned ad libitum from its chief market-town? Is it at all likely that the Egyptians would have committed the equivalent absurdities of dating the first year of the Sothic cycle, or any of its subdivisions, twenty years earlier at one end of the country than at the other,—or of celebrating the great annual festival for the "Manifestation of Sothis" on a different day in each province of the

We assume no arbitrary position, but only fol-low the Egyptians themselves, both in assuming a fixed standard of latitude as the basis of their chronological notation, and in selecting the particular one of Heliopolis. There, Eudoxus and Hipparchus laid the foundation of astronomical science by remodelling the rude materials accumulated during unnumbered centuries by the stargazers and astrologers of a primeval age. Nay, so ancient is this central college of learning, that we find the "First over the Astrologer-house of we find the "First over the Astrologer-house of Heliopolis" mentioned as early as in the Hieratic Papyri of Seti-Meneptah II., among the most noted functionaries of the day. If, then, we make any other latitude than Heliopolis the basis of a datum purely chronological,

we start from a wrong foundation, and canne escape being fixed to a false position.

It will be easy to demonstrate by a reductio ad absurdum that Biot's dates would be suicidal by their historical consequences, even if the mistaken datum of computation had not sufficed to render

them exceedingly suspicious.

His date for Thothmes III. being set at B.C. 1445, and that for Rameses III. at 1300, gives an interval of 145 years. There are eight intermediate kings in lineal descent:—Amenhotp II., mediate kings in lineal descent:—Amenhotp II., reigned 11 years; Thothmes IV., 10; Amenhotp III., 22; Horus, 37; Rameses I., 1; Seti-Meneptah I., 30; Rameses II., 66; Seti-Meneptah II., 20. The long reign of Rameses II. is authenticated by his sixty-second year being found on monuments. We should thus have only fifty-nine years left for his six predecessors, whereas Manetho's figures give a total of 111 years. Now the long minority which opens the thirty-seven years' reign of Thothmes III. shows us that he was not above offer at his death, or the one nart; while not above fifty at his death, on the one part; while on the other part, there is monumental proof that

Seti-Meneptah I. also cannot have lived less than fifty years, since he drove the Shasu from the Delta in his first year, and was old enough for his eldest son to be a grown-up youth in his campaign against the Horites. From these premises, which against the florites. From these premises, which would place the births of these two kings respectively at B.C. 1495 and 1435, it would follow by Biot's dates that the six kings between Thothmes III. and Rameses II. must have been born when their fathers were ten years old!

There is no escaping this absurd issue by assuming collateral reigns, for the Tablet of Abydos, which gives these six reigns, is universally admitted to represent a true lineal succession. Twenty years between each generation is the least that on the protection of the least that on the reticular action of the least that the protection is the least that the least t that can be rationally assigned, and that is about the average which Manetho's sum of 111 years

Far be it from me to impugn the scientific skill of so eminent an astronomer as Biot in the calculations that lead to so ridiculous a result. It is only by an error of judgment in the selection of his fundamental datum—an error totally inde-pendent of his learning and high standing as a mathematician—that he has been misled; and by the power of his name would draw many after in the wake of the same error, if it were not clearly and openly exhibited. A great man cannot

commit a small mistake.

The Calendar of Elephantine certainly does give a very definite date for a year of Thothmes III.; and being the only Egyptian monument at present known, sufficiently precise in its expression to do so, its value as a chronological pivot for the positions of the eighteenth and nineteenth dynasties can scarcely be overrated. The 28th day of Epiphi is named as the day on which the festival of Sothis was celebrated throughout the kingdom. Owing to the exact coincidence in ancient times between the Sothic and Julian years, the star, in a given latitude, always rose heliacally on the same Julian day. The beginning of the Sothic cycle is the year in which the 1st day of Thoth fell on July 20th, the day of the heliacal rising of Sothis at Heliopolis, and 15th day after the summer solistice -B.C. 1325. The Thothmes Calendar shows a difference of position, of thirty-eight days, equal to 152 years. Therefore, the date given by the monu-102 years. Interester, the take given by the hold-ment is 152 years before the beginning of the Sothic cycle—B.C. 1477—reckoning by the Egyptian standard of latitude, the Astrologer-house at He-

In Biot's next date, for the period of Rameses III., a double correction is required, or the removal of the Thothmes date; even taking it for his last year, would only leave ninety-one years between him and Rameses III.;—barely fifteen years

per generation.

MM. de Rougé and Biot's date for Rameses III. is deduced from a passage in the Calendar of Me-dinet-Abou: "Beginning of Thoth, manifestation of Sothis, day to do duty to Amen-Ra king of gods." As Champollion interprets "the beginning" prefixed to a month, as its first day, M. de Rougé takes this reference to denote the beginning of the Sothic cycle itself, and that it must synchronize with the reign of Rameses III., and infers that the datum corrected for the period when the phe-nomenon occurs in the latitude of Thebes, places

his reign at 1300 B.C.

This monument, like the former, is a chronological memento of a festival-day, to which all the above observations on the calculations from the Elephantine Calendar equally apply; with the additional fallacy of reckoning the date of the cycle from various latitudes, and so giving it as many beginnings as there are Egyptian provinces. If we are to infer from this monument that Rameses III. reigned at the beginning of the Sothic cycle, we must put back his accession to 1325 B.c. on the same grounds that we put back the date of Thothmes III. to 1477; and we then fall again into the pre-posterous absurdity of assuming six generations

only ten years apart.

The second false position in this date consists in assigning the chronological issue, by whatever latitude.

astrological character, and consequently just as likely to mark the relative configurations of the times, stars, and festivals at the birth, or the death, as at the accession of their royal subject, the whole difficulty created by this date vanishes like en-

The account I gave above shows that it is his-torically impossible to make the year 1477 of Thothmes III. any other than his last year. May not the Calendar of Elephantine be meant to commemorate the configurations that marked the period

of his death and apotheosis?

Is it not the same with the Calendar of the Great Rameses II., on the ceiling of the Ramesseum? From the relative position of the symbols, the heliacal rising of Sothis on an early day of Thoth is distinctly indicated, though the exact day is not named. Therefore, the period it marks may range from 1325 to 1300. Yet we may be certain from it that the Sothic cycle must have begun under him, and therefore cannot have begun also under Rameses III.; because there are twenty years between the death of the former and the accession of the latter: and had the cycle begun in the reign of Rameses III., Sothis would not have risen heliacally in Thoth, under his grandfather, but in Mesore. The legend that "the Sun grants to Rameses to shine in the celestial sphere like Sothis at the beginning of the year" (i.e. of Thoth), looks very much as though this intricate chef-d'œwre of the "First over the Astrologer-house" had been concected to record those configurations of the times, stars, and festivals, under which the illustrious monarch was promoted to the celestial sphere aforesaid. Now, by the figures I have given above, he died in 1300 B.c.

above, he died in 1300 B.C.

And finally, as his majesty seems to have been a most liberal patron of art and science, and particularly partial to astronomy, may not the corresponding tableau, placed in the palace of Rameses III. at Medinet-Abou have been executed under the auspices of the same learned functionary to denote the conformations of the times. denote the configurations of the times, &c., which ushered the young prince and heir into the world some little time before his august grandfather was ushered out of it? Nothing can be more likely than that Rameses III. was born at about the beginning of the Sothic cycle, since his reign would fall by my account in 1280; and the historical rilievi of Medinet-Abou show us that he had sons old enough to bear arms, during his great expedition against the Shepherds of Jerusalem, the Anakim and the Philistines, which was ended

in the twelfth year of his reign.

I have dwelt somewhat minutely on the details of these dates, because the historical importance of the subject justifies it. Unless they be correctly fixed, we cannot synchronize with precision the corresponding events of Sacred history prior to the Jewish Exodus under the father and immediate predecessor of Ramees III. Regarded in that light, even independently of other considerations, the date for the reign of Thothmes III., by giving history a resting-point of the most positive character, is quite as important an astronomical date, both to sacred and profane history, as any of the dates in Ptolemy's Canon. FANNY CORBAUX.

BABYLONIAN DISCOVERIES.

In the notices recently sent to the Athenoum relative to the last king of the early Assyrian dynasty, I have written the name of the monarch Phal-lukha, but with some hesitation as to the true orthography of the name of the god which forms the initial element of this royal title; that is, as to the Roman letters which will best represent the pronunciation of the cuneiform word. The Greek texts which are now available, constantly confound the name with that of the god Belus, Bηλος being employed to represent both names in differently; but this confusion perhaps is owing to differently; but this contains perhaps is owing to the ignorance of copyists rather than to an ori-ginal want of distinction, for some of the MSS. have $Xo\mu\alpha\sigma\beta\sigma\lambda\sigma_{c}$ instead of $X\omega\mu\alpha\sigma\beta\eta\lambda\sigma_{c}$ to represent the cuneiform name of Shamas phul, and St. Jerome's translation gives Bolochus for the title of this very king, which in the Greek text of assigning the chronological issue, by whatever it is to be documents of an experiment of the reign of Rameses III. If the we will grant that these so-called astronomical calendars are just as likely to be documents of an Eusebius is everywhere written as $B\eta\lambda\alpha\chi_0c$. At

any rate, there is a marked distinction between the any rate, there is a marked distinction between the two names in the famous Palmyrene Inscription, where $\lambda\gamma\lambda\iota\beta\omega\lambda_{0c}$ and $M\alpha\lambda\alpha\chi\beta\eta\lambda_{0c}$, that is, "the winter rain" and "the summer sun," are invoked as $\pi\alpha\tau\rho\omega\omega$ $\theta\epsilon\omega$. I believe, then, that the true name of the god was Phul or Vul, the word being derived in fact from a root answering to the Hebrew 2z, and being identical with the title 2z, which we given between the property of the series 2z, and 2z and 2which was given by the early Hebrews to the "rainy" month. It must be remembered that the Assyrian Phul represents the watery element in nature, being the giver of rain, the Lord of canals, nature, being the giver of rain, the Lord of canals, aqueducts and reservoirs (bel-agalls (!) as in Ay λ t- $\beta\omega\lambda_{0c}$, and for Agal comp. Job xxxviii. 28); that his symbol is a canal branching off into minor water-courses; and that he is usually joined in the inscriptions with the Sun God to indicate their joint fertilizing functions, as in the short legend at Palmyra. Perhaps the name of Vologases or Bologases, which the Parthian kings assumed after conquering Babylonia may include this element, for I have seen the form Bovh on a Parthian coin, which I take to be the mint-mark of the city of which I take to be the mint-mark of the city of Vologesia. At any rate, it is highly probable that the name of Bula-verdee, which is often applied in Persia to tribes and places, preserves the title of this Pagan god, for the term is precisely analogous in its structure to Allah-verdee, Tangri-verdee, &c. "God-given;" and as the Persian and Turkish languages afford no explanation of Bula, it can only refer, as it would seem to the old myit can only refer, as it would seem, to the old my-thology. In deference to the received Scripture thology. In deference to the received Scripture orthography, I shall continue for the present to write the name of the god as Phul, and that of the king as Phul-lukha; but it may be questioned whether Vul and Vul-lukha would not be more correct.

While writing in correction of former statements, While writing in correction of former statements, I will add a note to the passage about Semiramis from Photius on Conon [ante, p. 466, col. 1, line 38].—"I have found a notice of Belochus and Semiramis in an old Arabic writer Abu Nasr Yahya, Ibn Harir, whose work on Chronology is quoted by Yacut in his great Lexicon, and who, following the numbers of the Septuagint, says that Belochus ascended the throne of Nineveh A.M. 3959, and after resigning forty-five years, admitted Semiramis after reigning forty-five years, admitted Semiramis to a participation in the empire. To this monarch is ascribed the foundation of the city of Aleppo, as if a local tradition had really survived of P —as if a local tradition had really survived or Turs Syrian expedition. There are many other dates and names given in this passage of Yacut's, which are curious, though the numbers do not agree ex-actly with the Septuagint dates, nor even with each other. Thus, the Exodus of Abraham from Chalden is said to have taken place in the 24th year of Zamas, who was the fourth king of Assyria, ascending the throne A.M. 3413, and the interval between the Exodus and the building of Aleppo is given as 549 years. The latter event would have taken place therefore in A.M. 3986, or in the 27th year of Belochus. In the second passage, however, the Assyrian king is named Belpassage, however, the Assyrian king is named Bet-kuras, and he is said to have begun to reign A.M. 3992. Perhaps Balator is meant, Belkuras being for Balafuras, the Arabic form of the Bala-pares of Eusebius. This indeed is rendered almost certain by the length of thirty years which is given to the reign of Belkuras, and which agrees with the thirty years assigned by the Greek chronolo-gers to Balatores or Tiglath-Pileser."

gers to maistores or Tigisth-Pileser."

Note to the passage where the name Baletar of
the Assyrian Canon is compared with Pileser of
Scripture [ante, p. 466, col. 2, line 35].—"Compare also the Armenian Canon of Eusebius (Aucher's Eus. vol. ii. p. 173) where the name of this Scriptural king of Assyria is written simply Pha-lassar, without the first element, Tiglath."

Note to the phrase "at the same time that the Era of Nabonassar was established at Babylon, and the Lower Dynasty commenced in Assyria," [ante, p. 466, col. 2, line 82].—"Compare the statement of Thomas of Erzeroom, that about the time of Poloshus presented in the statement of Thomas of Erzeroom, that about the time of Poloshus presented in the statement of Thomas of Erzeroom, that about the time of Poloshus presented in the statement of Thomas of Erzeroom, that about the time of Poloshus presented in the statement of the state Belochus many other dynasties arose in different See Aucher's Eusebius, vol. ii. p. 114, note 600, 602.

FOREIGN CORRESPONDENCE,

Orbitello.

THE road from Porto Santo Stefano to Orbitello lies along the fost of the huge mass of Monte Argentario till it reaches the head of the recentlyconstructed mole which conducts the causeway across the salt-water lake that intervenes, as I described in my last letter, between the mountain and the city. The road passes near various frag-ments of Roman constructions, the most remarkable of which are the remains of huge reservoirs, which formed the once celebrated cetaria of the gens Domitia, a wealthy and powerful family of sena-torial rank, who, in the last ages of the empire, held vast possessions in this part of the Maremma. The substructions of villas are still to be found in the immediate neighbourhood. But it must be supposed that the vast and costly buildings which jactis in altum molibus"-went to the formation of the cetaria, were intended not only to supply fish for the use of the proprietors when in-habiting their Tuscan villas, but also to profit by the abundance of the fish, which doubtless then, as now, distinguished this part of the coast, for the provision at all seasons of the year of their palaces in Rome. The Eternal City still continues to draw a considerable portion of its supply of fish from Porto Santo Stefano and Orbitello

The time spent in gazing at and musing over these stones, and the sermons on them, brought the sudden Italian nightfall upon me before I reached Orbitello. But in consequence of being thus belated I witnessed a spectacle both picturesque and locally peculiar, which I might otherwise have missed. The shallow salt-water lakewhich surrounds the little city brings with it, like most other sublunary matters, its good as well as its evil. The latter consists in the enormous generation of insects and offensive effluvia produced by the action of the summer sun on the large quantities of sea-weed left dry on the banks by the diminution of the water during the hot months. The compensating good must be sought in the exceeding abundance of fish which the lake produces:

—a source of such considerable profit to the inhabitants that the paternal government, which leaves not the poorest orange unsqueezed, reckons the surface of the lake as so much productive and therefore taxable soil. The gathering of the harvest thus taxed formed the spectacle above alluded to.

Almost all the fishing is carried on by night,and a dark night is the best for the purpose A narrow flat-bottomed boat, one person-man, boy, or woman-to scull, one or two men with long-handled, flat, fan-shaped, six-pronged spears, and a good bright lantern, form the equipage necessary for the occupation. A very similar weapon, if I remember rightly, is used for eelspearing in the Hampshire water-meadows. But there the sport is pursued by day, and the stroke is made almost at hazard. Eels form also a large portion of the Orbitello fishermen's gains. But the lantern used by them serves the double purpose of attracting the fish to their doom, and enabling the spearers to see to administer it. Of course the successful practice of such a system supposes the water to be very shallow. The lake on both sides and all round the town in the midst, was studded over with boats, each carrying its bright light, darting about like a swarm of colossal fireflies, as I came in sight of it from under the huge shadow of Monte Argentario. The dusky figures of the spear-men standing in picturesque attitudes ready to strike, and imperfectly shown by the uncertain light in the boat, were visible in those nearest the shore, and added to the interest of the scene. Orbitello, with its grim fortifications, and its lights reflected in the water beneath its walls, looked really quite queenly in the midst of its lake. And when, as I was crossing the water by the causeway which, as has been described, connects the town with the mountain, the moon began to rise above the dark mass of Argentario, and to spoil the sport of the fishermen by paling their ineffectual fires, and the whole swarm of them began to throng homewards towards the town, the entire scene had so much of stage-like effect and picturesque circumstance, as to send a tired pedestrian to his

quarters in this Venice of the Maremma in quite | he had any use for them, "Ma per far passare i a romantic frame of mind.

But those who know the Continent, in almost any of its parts, will hardly need to be reminded how miserably its little towns keep the promises to his bodily requirements, which their picturesque exteriors made to his imagination. I certainly ought to have thoroughly learnt by this time that large artistically-grouped masses of light and shade, battlemented walls, and lofty gateways have no necessary connexion with bed and supper. Mr. Dennis justly laments that, instead of having one good inn like Grosseto, this little town has two bad ones. However, I might have fared worse, and indeed often have fared much worse, than at the Chiave d'Oro in Orbitello.

Besides the remarkable peculiarity of its position, and the interest attached to the fine mountain promontory of Argentario, Orbitello has in itself nothing to offer to any other traveller than the professed and scientific antiquarian. To him its sea walls afford matter of speculation of the due degree of thorny-ness; the questions when, and by whom, were they built being still sufficiently open ones to admit of that learned tilting so dear to the thorough-bred antiquary. This must be considered matter altogether caviare to the multitude.

Not so, however, another of those wonderful remnants of a vanished race which exist in the neighbourhood of Orbitello. The site and walls of the Etruscan city of Cosa, or Ansedonia as it was called in the Middle Ages, are among the first objects which make the Maremma classic ground to the antiquary. But in this case, the mighty fragments tell their tale with an eloquence that speaks so unmistakeably to the unlearned eye,—the dullest imagination is so forcibly roused to awe and wonder,—and so much of present beauty is mingled with the memorials of the past, that there can be very few who would not derive the greatest gratification from a visit to Ansedonia.

About five miles to the east of Orbitello, on the coast, just outside the more southern of the two long sand-banks which have been described as connecting Monte Argentario with the coast, and thus inclosing the lake around that city, there rises immediately from the sea-shore an isolated hill in the form of a truncated cone. Around the top of this are the walls and towers of the ruined city of Cosa. The spot itself, from the peculiarity of its position, and the beauty of the scene around and beneath it, would be abundantly attractive had the hand of man left no traces of his passage

It is a good seven miles by the road which the traveller must take to reach Ansedonia from Orbi tello,—for it is necessary to pass first along the tongue of land on the tip of which the latter town uilt, and then to coast round the lake. For the first five of these seven miles, the road is good, Then a deer for it is the high road to Rome. sandy and rocky lane, which leads down to the coast, must be entered. For any other carriage than a stout and uninjurable country "barocino this lane would be impassable. And with such a vehicle I found it difficult enough. This "cattivo passo" opens on the sandy low coast immediately beneath the hill of Cosa, at a spot where an old half-ruined tower is occupied by a lieutenant and half-a-dozen soldiers of coast guard. A more miserable station than that occupied by this ragged little forlorn hope in the army of "protection" it would be difficult to conceive. Their tumble down tower stands in desolate solitude on the sands amid wide-spread fragments of Roman foundations. the right, rises immediately above them the hill of Cosa, effectually shutting out the hope of a breeze from the north. Behind them, inland, and southwards to their left, all is swamp:—so that it is impossible to conceive a locality more surely exposed to all the violence of malaria. But sundry circumstances of the coast conspire to render the spot a favourable one for the secret landing of a cargo of goods,-and the paternal government is, therefore, compelled to offer up an annual tribute of fevered victims to the maleficent demon of trade restrictions.

I had an introduction to the grey-headed commander of this luckless band, whom I found turning ninepins at a lathe,—not, as he explained, because

he had any use for them, "Ma per far passare i giorni che qui non finiscono mai," to pass away the days that never come to an end here. He was only too glad to have the diversion of showing a stranger the lions of his little domain,—where, in truth, much of Alexander Selkirk's well-known ditty was applicable enough to his own case.

The ascent from this lonely watch-tower to the walls of Cosa is a long mile, through a thick growth of shrubbery for the most part evergreen,—among which may be traced, here and there, the ancient paved road running up the side of the hill in a straight line. The walls generally, both within and without the city, though very thickly overgrown with coppice in many places, are on the whole much more accessible than these of Ruselle. The formidable marruca, though abundant, is not so omnipresent.

"He," says Mr. Dennis, "who has not seen the so-called Cyclopean cities of Latium and Sabina, of Greece and of Asia Minor, . . . will be astonished at the first view of the walls of Cosa. * * He will behold in these walls immense blocks of stone, irregular polygons in form, not bound together with cement, yet fitted with so admirable nicety that the joints are mere lines into which he might often in vain attempt to insert a penknife; the surface smooth as a billiard-table; and the whole resembling, at a little distance, a freshly-plastered wall scratched over with strange diagrams."

The description is exact, as the walls appear to the eye removed some ten or twelve yards from them. But if the observer should proceed really to subject the wall to the ordeal of the penknife as suggested, the expression would be found to be exaggerated. The accuracy, however, with which blocks so huge, and in many instances so irregular in form, are fitted together, is, indeed, extraordinary. In the case of Cosa, more still than in that of Rusellse, the method and style of workmanship exhibited in these walls have given rise to a great deal of learned discussion, and to a variety of theories as to the builders of them, and the epoch to which they ought to be referred. union of polygonal masonry with towers, of which several are still easily traceable around the walls of Cosa, is, as Mr. Dennis observes, unusual and nearly singular. Then, some parts, especially the lower portions of these walls, are polygonal, while the upper parts are, for the most part, constructed in horizontal courses. The various conclusions which have been or may be drawn from these and other circumstances may be seen fully discussed in the learned yet highly amusing work of Mr. Dennis. And I will content myself with remarking, that a careful observation of the exterior of the walls throughout their entire extent, as far as this is practicable, led me to think that the polygonal character of the masonry was much less decided than the descriptions I had read had led me to expect; and that the peculiar and evidently cut forms of several of the blocks in the most decidedly polygonal parts of the wall were such as, in my opinion, wholly to exclude the idea, which has been a good deal dwelt on, that the irregular or polygonal construction was due to the material having a natural polygonal cleavage. Mr. Dennis concludes his remarks on the subject by observing, that "it may be said that this rectangular may sonry,"-viz. that observable in the upper part of the walls,-" is but the natural finishing off of the polygonal, just as the latter generally runs into the horizontal at angles,—as may be observed in the gates and towers of this same city." My observation would lead me to think that such had been clearly the case; the more so, as I am inclined to suppose, after carefully marking the forms of the blocks in the polygonal parts of the structure, that the builders never purposely preferred that form to the rectangular,—that they made their wall as rectangular and in courses as horizontal as they could, short of undertaking the vast additional labour of squaring the blocks with the chisel.

It is probable, however, that the majority of those who may be tempted to visit this most interesting spot, will be contented to bestow one general look of awe and amazement at these mighty bearers of an enigmatic message across the chasm of twenty centuries, and will hurry onwards to the

inclosed top of the hill in their eagerness to enjoy the magnificent view it affords. In truth, the householders of Cosa, especially those whose banquetting halls looked seawards, must have enjoyed a pleasant prospect. What sunsets tipping the crags of the rocky Giannutri with gold, and tracing golden paths across the blue sea, thence to the shore! What lights and shadows playing on the wooded sides of neighbouring Argentario! What morning views of the distant mountains on the seaboard near Rome, and of many a height crowned with rival but leagued cities along the coast to the south-east !

A long summer's day may not be spent among these solitudes. Malaria, the righteous avenger of the neglect, barbarism, and misgovernment which have made them solitudes, is there to forbid it. A short winter's day, I can testify, may be well so spent, though it is all too short.

T. A. T.

OUR WEEKLY GOSSIP.

THE public will learn with great satisfaction, that Mr. Rowland Hill has been appointed Secre-tary to the Post-Office, on Colonel Maberly's re-moval to the Audit Office.

This reminds us that several Correspondents have lately written to us on presumed abuses or shortcomings in the Post-Office; we have therefore made inquiries on the subject, the result of which is a conviction that many misconceptions prevail even in otherwise well-informed circles as to the real state

of things at the Post-Office. Complaints are made from day to day under a complete misunderstand ing of facts, and the Post-Office authorities are blamed for not doing that which has long been done, or for not interfering in matters which are beyond their province. For example, we hear complaints that there is no book-post to Melbourne. This defect is solely, we believe, attributable to the colony itself. Colonial postage is in many cases a subject for calonial legislation; and we understand that the Melbourne authorities oppose the institution of the book-post. Application was made to them by England three years ago on this very sub-ject; but without beneficial result. At this time, we believe that Government is willing and anxious to extend the advantages of a literary post to the colony, if the colony itself will only agree to the measure. Again, complaints are made that we have no book-post with America. Malecontents, however, should bear in mind that first of all we must settle the law of copyright with that country. We do not imagine—though we have no definite knowledge on the point-that our English Ministers would object to a book-post with America on such terms as would secure all the interests concerned. Nevertheless, it will be obvious to all, that so long as the free circulation of books between the two shores of the Atlantic is impeded by imposts, duties, copyrights, and other restrictions, the question is not properly one to be dealt with at St. Martin's-le-Grand. Our duty is not done, however, when we have thus rectified a few errors. It is necessary to inquire into the cause of them. Why are men, generally well informed, so much in the dark as to postal matters? We think the fault lies with the authorities. Why have we no Report from the Post-Office? Other departments render an account to Par-liament:—why not this? There need be no mystery about a Post-Office in this country. If an annual report were laid before the House, -a report showing, not merely the number of letters circulated and the receipts and expenses of the establishment, but, also, the progress and developement of the entire institution in its three several sections, Home, Colonial, and Foreign, with an abstract of the more important suggestions brought under its notice and adopted into its policy—misconception would be cleared away, and the public would see more nearly the character of

this great institution. At the last meeting of the Geographical Society of Paris, on the 7th inst., the gold medal was awarded to Dr. Barth, for his important geographical discoveries in Central Africa.

The place of Leopold von Buch has been filled

up in the French Academy by the election of Herr Dirichlet of Berlin.

Paris papers announce the death of M. Antoine Jay, Member of the Academy, and one of the founders and editors of the Constitutionnel.

A paragraph has gone the round of our contem-poraries to the effect that Mr. Rogers, our bard of "dear Memory," is alarmingly unwell, and not expected to recover. Even if the case were as is represented, the feeling and the taste which could make it a subject of newspaper gossip would be, in our opinion, very questionable. We know that in the recess, or during a dearth of news, editors are eager for the smallest scraps of domestic intelligence. But why, if space must be filled, news or no news, not fall back on monster turnips, the aurora borealis, and the sea-serpent? These waste paragraphs have at least this negative virtue:they wound no one's feelings, they shake no one's nerves, they bring tears into no loving eyes, they excite no resentful indignation in the hearts which they deceive. The sick room should, we think, be sacred from the prying eyes of the penny-a-liner. The statement about Mr. Rogers is a pure invention. For his age, the poet of Memory is in good health and enjoys his usual cheerfulness of spirits.

New pictures and panoramas open every week, or old ones so change their programmes as to acquire the interest of novelty. These places of popular resort have become an established feature of London life, like theatres and concert-halls; and the subjects selected for illustration on the large scale adapted for public exhibition are as various as the castes of men. This week, our old favourite panorama of Granada, in Leicester Square, has been removed to make way for a view of Berlin. In the same square, at the Panopticon-than which we know of no more delightful lounge in London, whether the taste of the pleasure-seeker incline towards Science or the Arts, whether the love that leads him forth find its gratification in fine music, in large fountains, in interesting experiments, or even in shopping—we have a series of pictorial illustrations of Acis and Galatea.—The Great Globe seems to be devoting itself more and more to an illustration of the all-absorbing topic of the warmost of its recent novelties having special reference to that subject .- Madame Tussaud's collection has, of course, we may almost say, received an addition in the shape of "the Old Commodors," now at the head of our Baltic fleet.—At the Royal Cyclorama, Regent's Park, a View of Naples, with the Eruption of Vesuvius and Destruction of Pompeii, has been opened to the public of the West End; and at the Prince of Wales's Bazan, in Regent Street, we have yet another "Dioramic and Panoramic Exhibition."

A Correspondent, who holds a place in the Civil Service, offers the following observations and suggestion to the authorities of the University of London.—"King's College appears to keep pace with the times. No sooner has the Government announced its intention of organizing a reform in the Civil Service by raising the educational stan-dard required for admission into its ranks, than a department is at once opened with a view of affording facilities and a means for providing the neces sary acquirements for those about to enter the Civil Service. Many doubtless will avail themselves of the privilege afforded. But I think you will agree with me, that a still greater boon would be conferred were they to open their classes to those already belonging to the Civil Service. Of course, such students could not be expected, nor would it be possible, to maintain a regular attendance; but were evening classes to be formed, and tickets of membership issued which should enable the holders to attend as many of the lectures as they could. I think it not improbable that many would be found to join. There are many who could ill afford to devote regular and stated hours from their official employment to study, who could, nevertheless, be occasional attendants upon such subjects as modern history, English composition, and the law of nations,—which I notice are included in the prospectus already issued, and will be found of infinite service to those who are desirous of holding appointments in Her Majesty's Civil Service. The hours at which the lectures are given in the course

announced in the prospectus would quite exclude those already admitted to the Civil Service." We regret to hear from Barcelona that the

magnificent Church of St. Francis de Paul in that city has been burnt. The whole interior has been gutted by the flames.

Among other illustrations of the war not yet announced by us, we have on our table two new maps by the Messrs. Johnston,—one of the Black. Sea, the Caucasus, and the Crimea, with enlarged plans of Sebastopol (as seen by the officers of Retribution) and the Bosphorus-another of the Baltic, with enlarged plans of Cronstadt, Sveaborg, Revel, Port Baltic, and Gulf of Riga.—Messrs. Orr & Co. have issued a descriptive Atlas of the Seats of War, on a small scale, with appropriate letter-press. The maps appear to be eld maps, and letter-press. they are anything but well drawn.

M. de Mirecourt, whose adventurous Life of George Sand we alluded to a few weeks past, has met with his match in M. É. de Girardin. The editor of the Presse, not content to sit under the shadow of M. de Mirecourt's portraiture of him in the Lives of Contemporaries, instead of following Madame Dudevant's example of mere denial of fact, appeals to the courts of law for protection; and the courts of law have convicted the biographer of libel, and sentenced him to pay a fine of five hundred francs. What is odd in this battle of authors is, that the Life of Girardin was—and is— really one of the least piquant in the series, George Sand was able to say that not one fact in the pretended memoir was correctly stated-not even her name. M. de Girardin only complains that he is represented as having no opinions of his own, and that his moral perceptions are not of the fines

A new clock, placed on a high tower, is to form a prominent feature of the south side of London Bridge. Out of that spirit of idolatry of which the people do not seem to tire, this slock is to bear the name of Wellington. It will scatter light over the large space occupied by the entrance to the great railway lines which have their common station at London Bridge,—and will be seen at night, a beautiful and conspicuous object, like the lighted turrets of the Panopticon, from many parts of London. The tower will be seventy feet high and forty feet broad at the base; and the clock, having four illuminated faces, will turn one of its discs to

each quarter of the metropolis.

M. de Lamartine has a new work in the press. a 'History of Turkey,' of which a notice has appeared in the Constitutionnel—and thereby hangs peared in the continuous and thereby hangs a tale. In a leading article, says a Correspondent of the Daily News, signed by M. de Cesena, the poet's mighty genius, indefatigable activity, rich imagination, brilliant style, elevated sentiments, &c., are the theme of a florid article, at the end of which his special aptitude to form a right judgment of Eastern affairs, in consequence of his long residence in the East, is brought out in strong relief. The reader is then told that the preface to the work will be found in another part of the paper, and the subscribers to the Constitutionnel are congratulated upon their good fortune in being are congratuated upon their good forting in being enabled to read this production before the publication of the first volume. They will, "perhaps," it is said, "observe some few expressions betraying opinions which are not ours, but they will understand that we owe it to M. Alphonse de Lamartine's renown to leave him his entire independence. We desire to see nothing in this preface but the entire justice which the eminent historian, in his dignified impartiality, renders to the national conduct of the Imperial Government so far as regards foreign policy and the Eastern question. It seems to us useful and opportune to let France and Europe see what is thought of this conduct by an ex-Member of the Provisional Government and of the Executive Committee. Praise from a friend is, doubtless, a delight, but praise from an adver-sary is more—it is a triumph," Turning to the preface, which occupies eight columns of the number of the Constitutionnel, it is easy to discover the sentiments which, "perhaps," may be thought by the subscribers of that journal to conflict with what they are in the habit of reading in its pages. For M. Lamartine, while praising the conduct of the French Government with respect to the

Eastern question, and advocating an energetic support of its foreign policy, as now declared, is not resigned to, and does not believe in, the per-manent extinction of liberty in France. He argues that France is at this moment engaged in fighting the battle of liberty, and repudiates the idea that she alone is to have no part in the prize. In the present state of Europe M. Lamartine sees the principle of obedience to tyrants maintained by Russia, and the cause of liberty and order iden-tified with Turkey. It is no longer, he thinks, a question between Ottoman and Christian, but a question between Ottoman and Christian, but one on which depends the independence and inviolability of every nation. But then, says M. Lamartine, "I hear it objected, why, you your-selves abdicate liberty; look at the present state of France and other Western nations," To this he answers—"eclipses do not extinguish the sun; they merely intercept its rays. The eclipse passes away and the light remains. The state of the nations of Europe at this moment is not a principle, but an accident; it is a moment of lassitude—a mere halt in the march of transition." In another halt in the march of transition." In another passage, alluding to the present compression of liberty of speech and writing in France, he says it may possibly be patriotic for a good citizen to resign himself for a while, although with a sad heart, to a forced silence, but—and again he likens the present suspension of liberty to an eclipse—this is the result of the mere mechanism of government, which may be broken to-morrow, and all the vital elements of a great nation remain intact. If, however,—and this is why he urges an unanimous support of the present national movement against Russia,—France were to connive at Russian aggression, and resign her proper place among the nations of the earth, she would yield a principle superior to the vicissitudes of governments—a principle anterior to dynasties or repub assage, alluding to the present compression of ments-a principle anterior to dynasties or repubments—a principle anterior to dynastics or repub-lics—"a principle which survives empires and dictatorships." Language so free and bold was not likely to pass; and the police authorities were by no means of opinion that the poet's "renown" entitled him to the independence claimed for him by M. de Cesena. A peremptory order came down to the office to destroy all the remaining copies. M. de Cesena's article gave way to a long dissertation on drainage, by M. Caudain, and the scissors were hastily put in requisition to carve out a batch of accidents and offences to fill the place of M. Lamartine's eloquent periods.

The EXHIBITION of the ROYAL ACADEMY OF ARTS WILL OPEN on MONDAY NEXT, the 1st of May, at 12 o'clock. Admission, 12, Catalogues, 12, JOHN PRESOTT KNIGHT, R.A. Scoretary.

SOCIETY OF PAINTERS IN WATER COLOURS.—The FIFTIETH ANNUAL EXHIBITION is NOW OPEN, at their Gallery, 5, Pall Mall East.—Admittance, 1a: Catalogue, 6d.

JOSEPH J. JENKINS, Scoretary.

THE NEW SOCIETY OF PAINTERS IN WATER COLOURS OPEN their TWENTIETH ANNUAL EXHIBITION, at their Gallery, 53, Pall Mall, on MONDAY, May 1.

JAMES FAHEY, Secretary.

SCIENTIFIC

SOCIETIES. ASTRONOMICAL. — March 10. — Arthur Kett Barclay, Esq., V.P., in the chair.—Messrs. J. S. Ancona and J. Cockle were elected Fellows.— Various letters were read, and observations were submitted on the recently discovered planets Amphitrite and Bellona, and on the new comet. Reference was made to the offer of a prize by the Academy of Sciences of St. Petersburgh, on the comet of Biela .- The disruption of the comet of Biela into two bodies, apparently separated by an empty space, is a unique event in the annals of astronomy. This catastrophe, which occurred in 1846. almost under the eyes of astronomers, has been followed by extraordinary changes in the aspect and brightness of the two heads. Analogous changes were again exhibited on the occasion of the return of the comet in 1852, notwithstanding the consider-able augmentation of the mutual distance of the They indicate, according to all appearance, the continued existence of a mutual action of a very remarkable character. All these circumstances concur to render the comet of Biela an object of the very highest scientific interest. Further, it is to be remarked that, on the occasion of the last apparition of the comet in 1852, the observed positions have differed enormously from the ephemeris calculated beforehand by Signor Santini, and that it is not yet decided whether the differences between theory and observation ought to be attributed solely to the imperfect nature of the calculations, or whether they have been produced by forces which, at the time of the subdivision of the comet, had effected violent alterations in the orbit. Consequently, a vigorous investigation of the orbit of the comet has appeared to the Imperial Academy of Sciences to be worthy of being proposed to the competition of astronomers and geometers, as the subject of an extraordinary prize.
Considering that it is impossible, under present circumstances, to foresee all the consequences to which the researches will lead, the Academy does not think that it would be desirable to restrict too rigorously the problem proposed for solution. programme is accordingly comprised in the following points:—1. The Academy demands a rigorous investigation of the elements of the orbit described by the centre of gravity of the comet of Biela which must be founded on a minute discussion of all the observations obtained during the six apparitions observed between 1772 and 1852, respect being had to the sensible perturbations produced by the planets.—2. In case it may not be possible to represent in a satisfactory manner all the observations by means of a single orbit, it will be necessary to divide the investigation into two parts, one of which will embrace the observations from the earliest period down to the epoch of the separation of the two heads; the other will include all the observations made from that epoch down to the present time.—3. The investigation should be especially directed to the mutual relations of the two heads, in order to determine not only the position of the centre of gravity of the two heads, but also, if it be possible, the laws according to which the alterations of their relative positions are effected.—4. The memoir for competition ought to be accompanied by an ephemeris, calculated be-forehand for the next apparition of the comet in 1859. Considering the long and troublesome calculations which the complete solution of this problem will demand, the Academy fixes the 1st of August, 1857, as the term for presenting the memoirs destined for competition. The adjudication of the prize will take place at the public sitting of the same year. The memoirs for competition may be written in Russian, Latin, French, German, or English. They are to be addressed anonymously, 'To the Imperial Academy of Sciences of St. Petersburgh,' but furnished with a motto. A sealed packet annexed bearing the same motto as the memoir will contain the name and address of the author. The memoir crowned will be published by the Academy, and the author will have fifty copies placed at his disposal. The packets of the unsuccessful memoirs will be burned, and the memoirs will be placed at the disposal of the

authors. The prize is fixed at 300 ducats of Holland. There will be besides an accessit of 150 ducats of Holland.

ASIATIC.—April 8.—The Rt. Hon. Holt Mackenzie in the chair.—Prof. Wilson's lecture 'On Buddhism,' which had been postponed in consequence of the illness of the lecturer, was delivered.

—The lecturer entered into some discussion upon the history of Sakya Muni, or Buddha, and on a consideration of the great difference of the authorities as to the time of his birth, amounting to 500 years,—of the non-existence of his birth-place in years,—or the non-existence of the allegorical names of his parents, and some other particulars, he thought it probable that Buddha himself was merely an imaginary being who had no existence; though it was certain that a change in the religious organi-zation of the Brahmanical system did take place about the time attributed to Sakya's death,doctrines, objects of worship, and religious practices, remaining much the same; but the moral virtues and a pious self-denial being exalted above the outward observances so characteristic of Brahmanism. The lecturer doubted that the rock inscriptions of Piyadasi could be considered exclusively Buddhist; at all events, their tone was not that of a triumphant faith. The Buddhist faith was certainly provided in India during the first five centuries of the Christian era; but it disappeared in the seventh from external violence, though accounts exist of from external violence, though accounts exist of some persecutions, especially in the south. The system appears at this day to be on the decline where it is not upheld by the Government, or where the priesthood does not constitute a large proportion of the population. In Tartary, the number of the priesthood appears to be very great. The recent French missionaries, Huc and Gabet, found 4000 resident wirest in one wonsetery, and heard 4,000 resident priests in one monastery, and heard that the number belonging to the chief establish-ment in Tartary was 30,000. Those gentlemen were struck with the resemblances between the practices of the Romish Church and those of the Buddhists, — and particularly the rosary, dal-matique and mitre, the holy water, saint worship, resemblances which it was impossible to consider merely accidental; and they believed that much of the especial observances of Buddhism, as regarded costume and ceremonial, were introduced by a European, or, at least, Western Christian, in the beginning of the fifth century. The lec-turer was of opinion that the belief of Sakya Muni was decidedly atheistic; and that the limited recognition of a Supreme Being, which subsequently prevailed in several Buddhist countries, was a mon the ancient faith. None of the authorities translated by M. Burnouf or Mr. Gogerly contained the slightest allusion to a first cause. A fundamental dogma was the eternal existence of matter, life was a source of evil, and the only escape from it was the utterly ceasing to be - a condition which was called Nirvána, a word thought by some to mean absorption into the Divine essence, but which was really significant of extinction - blowing out, as of a candle. It is true that there were rewards and punishments, even in ancient Buddhism, for virtue and vice, but they were temporary; and when regularly gone through, the soul returned to earth, under a new form, to begin a new course, which would be closed by a similar condition of reward or punishment; and the final extinction which would put an end to this continual transmigration was the reward of the highest virtue.
The real ancient doctrine was summed up by a
Pali authority, in the following manner:—Beings exist by their own nature; after life they go into other forms, by the power of the same inherent tendency; and, finally, they escape into vacuity.

bases as an acid. Heat is, however, necessary to effect this combination,—a combination of which all the well-known silicates, whether natural, as all the well-known sincates, whether natural, as feldspar, mica, clay, &c., or artificial, as glass, slags, &c., are the results. The common forms of insoluble glass are produced by the union of silica with more than one base. But, when combined with an alkaline base only, silica forms a soluble glass, the degree of solubility of which depends on the proportion which the silicic acid bears to this alkaline base. This soluble silicated alkali (or water-glass) may be prepared by various processes.

Messrs. Ransomes obtain it by dissolving broken
flints in a solution of caustic alkali at a temperature of 300° Fah.—[Communication made to the Royal Institution by Prof. Faraday, Athenœum, June 17, 1848.]—This water glass has been applied to several purposes, three of which were noticed:—1. To protect building stones from decay. Stone surfaces, by being exposed to the atmosphere, become liable to disintegration. Moisture is absorbed into their pores. The tendency of their particles to separate, in consequence of expansion and contraction, pro duced by alternation of temperature, is thus in-creased. Sulphurous acid is always present in the atmosphere of coal-burning cities, and corrodes the calcareous and magnesian ingredients of colites and dolomites. As a preventive of destruction, whether arising from physical or chemical causes, it has been proposed to saturate the surfaces with a solution of the water-glass. It is known that the affinity of silica for alkali is so feeble that it may be separated from this base by the weakest acids. According to the expectation of those who recommend the silication of stone, the carbonic acid of the atmosphere will set the silica free from the water-glass, and the silica, thus separated, will be deposited within the pores and around the particles of the stone. The points of contact of these particles will thus be enlarged, and a sort of glazing of insoluble silica will be formed, sufficient to protect the stone against moisture, &c. Two por-tions of Caen-stone were exhibited, one of which had been soaked in a solution of water-glass two months before. The surface of the unsilicated specimen was soft, readily abraded when brushed with water, and its calcareous ingredients dissolved in a weak solu-tion of surphurous acid. The silicated surface resisted the action of water and of dilute acid. -2. Another proposed use of the water-glass is that of hardening cements, mortars, &c., so as to render them impermeable by water. Fourteen years since, Mr. Anthon proposed several applications of the water-glass: among others, the renderaons of the water-gass; among others, the render-ing mortars water-proof. He also suggested that this substance might be employed as a substitute for size in white-washing. It was demonstrated by experiments that carbonate of lime, mixed up weak solution of water-glass, and applied as a whitewash to surfaces, was not washed off by sponging with water, and that common whitewash, laid on in the usual manner with size, was rendered adhesive when washed over with water-glass .- 3 The Stereochrome of Fuchs. The formation of an insoluble cement by means of the water-glass, whenever the carbonic acid of the atmosphere acts on this substance, or whenever it is brought in contact with a lime-salt, has been applied by Fuchs to the process of fresco secco, which thus becomes invested with the capability of receiving and perpetuating works of the highest artistic character, and which may be executed on a vast scale. The stereochrome has been adopted by Kaulbach in decorating the interior of one of the national edifices at Berlin. These decorations consist of historical pictures, 21 feet in height and 244 in width, single colossal figures, friezes, arabesques, chiar-oscuro, &c. On the effect of the three finished, it has been remarked that they have all the brilliancy and vigour of oil paintings, while there is the absence of that dazzling confusion which new oil paintings are apt to present, unless they are viewed in one direction, which the spectator has to seek for. Mr. A. Church has suggested that if the surface of oolitic stones (such as Caen-stone) is found to be protected by the process, it might be used, as a natural intonaco, to receive coloured designs, &c. for exterior decorations; the painting would then be cemented to the stone by the action of the

water-glass. Mr. Church has also executed designs | of leaves on a sort of terra-cotta, prepared from a variety of Way's silica rock, consisting of 75 parts clay and 25 of soluble silica. This surface, after being hardened by heat, is adapted for receiving colours, and for retaining them after silication.

SYRO-EGYPTIAN.—April 11.—T. Wright, Esq. in the chair.—Mr. H. Heane was elected a member .- A communication was made by Mr. F. Hetley, regarding some stamped terra-cottas found by him among the ruins of Palmyra, and speci-mens of which, as well as an enlarged drawing, were exhibited to the Society. The reliefs repre-sented two personages, apparently male and female, seated on a sofa like a Roman biclinium, and both wearing head-dresses not unlike some modern Asiatic crowns. Others represented the busts of the same personages.—A paper was read by Dr.
William Camps, 'On the Intellectual Character
and Habits of the Arabians, as for the most part displayed in the Makamat of Al Hariri.'

INSTITUTE OF ACTUARIES. - April 24. - John Institute of Actualities.—April 24.—John Finlaison, Esq., President, in the chair.—'On a Mode of approximating to the Value of Deferred and other Annuities when payable half-yearly and and other Annuties when payable hair-yearly and quarterly,' by Holmes Ivory, Esq., V.P.—After alluding to the methods of approximation adopted by Dr. Price, Morgan, Baily, and others, in the case of immediate Annuties, the author drew attention to the necessity existing for certain modifications of the rules laid down by those writers where Annuities were either temporary, deferred, or contingent, and proceeded to point out some simple but ingenious methods by which a close approximation to the values in such cases could be arrived at. These for the most part were based upon the assumption that the value of an Annuity to be entered upon at the end of $n + \frac{1}{n}$ th years was a mean very nearly between the value of an Annuity to be entered on at the end of n years and of one to be entered on at the end of $n + \frac{2}{m}$ th years, an assumption evidently the more correct in proportion as the intervals diminished. In this way it was shown that since $\frac{\mathbf{A}_{/n} + \mathbf{A}_{/n-1}}{2}$ would represent very nearly the value of an Annuity of 11. deferred $n-\frac{1}{2}$ years, and that A_n was the value of an Annuity, the first payment of which was to be made at the end of the year after the expiration of n years, it follow-ed that half the sum of these two quantities, or $\frac{A_{/n}}{2} + \frac{A_{/n} + A_{/n-1}}{4} = \frac{3 A_{/n} + A_{/n-1}}{4}$ would express very closely the value of an Annuity deferred n years and payable half-yearly. Reasoning in the same manner, the value of an Annuity de-ferred n years and payable quarterly, was shown to be $\frac{5 \text{ A/n} + 3 \text{ A/n} - 1}{1}$, and so on for less intervals. Applying the like principles to the case of temporary Annuities, it followed that the value of an Annuity for n years payable half-yearly, would be very nearly $\frac{3 A_n / + 1 + A_n - 1}{4}$ and for the 4 same term payable quarterly $\frac{5 A_{n/} + 3 (1 + A_{n-1/})}{1 + A_{n-1/}}$

-The author then proceeded to discuss the corrections necessary in the case of contingent reversionary Annuities, and showed that when intended to be payable by instalments a certain deduction must be made from the value when payable annually. Thus, a near approximation to the value of any. Thus, a near approximation to the value of a contingent reversionary Annuity on the life of A, to be entered upon at death of B, and to be then payable half-yearly, would be given by the expression $A-AB-\frac{B^A}{4}$, the quantity to be deducted, becoming less as the instalments of the reversionary Annuity become more frequent.

PINE ARTS

SOCIETY OF PAINTERS IN WATER COLOURS.

Between the painters who use water and those who use oil, there seems now almost an amalga-mation effected. There are many young oil-painters who stain their canvas with mere transparent washes of oil, and there are many young painters in water who use body-colour in a bolder impasto than their rivals. The one party voluntarily deprive themselves of one great advantage of their material for the sake of facility and brightness; the other, more ambitious and more successful, have enriched themselves by the acquisition of their rivals' leavings. Several Landscapes exhibited this year in this excellent and interesting Exhibi-tion, have all the golden luminousness of oil. Many of the sketches in the Suffolk Street Gallery approach the flimsiness and neutral pallor of water. This confusion of purpose and waste of means remind us of the combat of the demons in Dante, where each devours his rival and assumes his form, for water now threatens to become oil and oil water, and the paint that the one throws off as an incumbrance

the other instantly claps on his paper as a prize.

Messrs. Copley Fielding, Branwhite, Cox, Fripp and Richardson are very prolific in their land-scapes. We have Mr. Lewis, who paints as if with needles, and Mr. Cox, who slobbers on his breezy views with modified sponges. Mr. Gilbert, breezy views with modined sponges. Ar. Gilbert, sketchy and etchy, treating paper with all the facile elegance with which he hatches wood; and Mr. Stephanhoff, vague and coarse, with his flights of pinky cupids choking up the air, and quite destroying all ventilation in what he is pleased to call his Bower of Blies. From the landscapes by lesser names than those we have given above, it would seem easier to give a fresh natural effect of nature in water than in oil, but more difficult for a weak eye for colour to escape vapid greens and insipid purples in the former material than the latter. A feeble colourist in oil is as often too warm as too cold, as often hot and sticky as tame and true, but coldness seems the prevailing fault of a second-rate water-colour painter. seems, too, quite as much tendency to carelessness as in oil,-and while there are one or two Pre-Raphaelite pictures picked out with second-sight Raphaelite pictures picked out with second-sight potency, there are paintings apparently produced by washing three dirty palettes with a sponge, and then passing the same useful marine production over a harmless sheet of paper. The figure and genre pictures, on the whole, present more progress than even the landscapes; and while Mr. Cox raises the wind as fast as ever with his breezy heaths and rainy skies, and Mr. Copley Fielding is vaporous and atmospheric as usual, Mr. Haghe gives us two magnificent sketches of Highland scenes, broad and grand, and admirable both for composition and chiar-oscuro, such as seem to carry on this almost new and peculiar English art some steps further into the region of the possible. For the first time, two great figure-pieces claim our attention, while on either side Mr. Gilbert and Mr. Topham challenge attention with even the "blue crystal" of Mr. Richardson's Italian seas, or the leafy interwoven nooks where Mr. Branwhite loves to see the earth growing "one emerald."

Mr. Carl Haag has surpassed himself, if not most of his predecessors, in his two companion pictures, both, we believe, painted for Her Majesty and Prince Albert,—Morning in the High-

lands—the Royal Family ascending Loch-na-gar (No. 83), and Evening at Balmoral Castle—the Stags Orought Home (201). In the latter picture, the Queen, the Prince and the Royal children, attended by gillies holding dogs, stalkers, and old Highers are mounted on ponies, struggling up round the crags of Byron's favourite mountain, down whose broad steeps the flowers of the heather are streaming like purple wine down the hills at the vintage; the full daylight effect, the vaporous vintage; the full daylight effect, the vaporous abysses in the distance, the little torrent dwindled to a silver thread in summer, are only equalled by the graceful yet bold drawing, the bold blocking out of light and shade, and the admirable composi tion. The faces are not very highly studied, yet are truthful and appropriate in expression. The richness of colour and its lucidity carry this painting into a region quite distinct from all the indefinite blurrings that were called water-colour drawings in the days of our fathers. The second orawings in the days of our lathers. The second picture represents the evening of the same day:—the classmen are unstrapping the deer that the Prince and his men shot in the morning, and have flung them down before a door of the Palace, from which the Course is the property of the Palace, from the property of the property of the Palace, from the palace of the palace, from the palace of t which the Queen, holding the Prince of Wales by the hand, has been summoned to see the spoil. Prince Albert, whose attitude is noble and manly, is pointing to a particular buck, which he holds by the horn. Behind the Queen is the Duchess of Sutherland, and two ladies of the Court ; on either side of the windows, lit from within, stand gentle-men of the Court. On one hand a Highlander is lifting a deer from the pony, and in the centre stands an attendant holding a bundle of burning pine-staves, whose strong glow of light struggles with the full blue moonlight, whose pale shadows contrast with those crimsoned by the flame. A third light, that of the drawing-room, blends with these two, while the whole picture is bathed in a golden universal tone, very beautiful, but we think more resembling that of lamplight than the lurid fitful catching spurts produced by torches. For sin, however, in so beautiful an aspect, we confess to having some sympathy, and prefer an artistic falsehood to a disgusting truth. The light and shade is daring in the extreme, statuesque and firm, and the drawing very perfect. The whole picture has a regal air about it, and is fit for any palace in Christendom. The only flaw that we could observe was a speeky patch, probably truthful, but rather destructive of breadth, in the foreground of the morning picture.

Mr. John Gilbert is clever and agacant as ever,

versatile, picturesque, happy in his contrasts and successful in his subjects, handling brush and pencil with a facility delightful to his spectators, but very dangerous to himself. His pictures are always brilliant suggestions of ready-witted fertility, but the perfect product and possibility of his cultivated artistic mind we never hope to have. If he can balance two heads, match two colours, carry through a tone, sketch a place he has never seen, he is satisfied; and one who does so well without model will find difficulty in allowing himself time to observe nature, and will be too proud to bind himself in partnership when he has once thriven on his own responsibility. His most interesting picture is Hudibras and Ralpho in the Stocks (18); the most clever and full of subject, the Drug Bazaar, Constantinople (34); the most admirable in richness of tone, A Turkish Water-Carrier (137); the most conventional The Rosary (6). The 'Hudibras' is cold in tone for Mr. Gilbert's usual colour: the heads are very well contrasted; the flesh of the old man fresh and tender, and that of the squire yellow and leathery. The face of the buxom widow is scarcely enough studied, but the King Charles's spaniel and the lurching vagabond cur are very happy, and nothing could be better than the contemptuous indifference of the ladies' groom. The Drug Bazaar' is full of life and animation, and the effect of light very happy; the detail delicate, and the breadth perfectly maintained.

Mr. Topham favours us with many sketches of

Mr. Topham favours us with many sketches of Spanish life, good in colour, but not glowing or full of the climate. His objective painting is rather negligent, more from indifference than inability, and neither his expression nor objectivity are carried to their ultimatum. These times of

ours want all a man's earnestness, and we cannot say to Mr. Topham as Lavater said prophetically to Fuseli, "Do only half you can do." His Fortune Telling in Andalusia (26) is his best; but we are constantly looking behind his frames to see if the finished picture is hidden there, and are dissatisfied with a sketch which seems only half of what the artist can do. The peasant girl is very pretty and graceful, and all the faces are well intentioned, were there not an old proverb, coarse but true, that "near does n't count."

The same accusation must be brought against Mr. F. Taylor, whose paintings are clever and imaginative. His Festival of the Popinjay (44) is meagre in thought and seems only half of a good thing; the faces are scarcely more than hints, and are rarely characteristic. Mr. H. P. Rivière treats Irish peasant subjects in a Cockney way, and his Pats have not got the brogue at all at all.

Mr. Lewis is the Pre-Raphaelite of the Gallery, and is hard in his outlines. His Italian peasants look as if they had got, as the Irishman said, "quite blue mouldy for want of a bating." His Eastern scenes are Oriental, but not hot; his Italian women are poor, bleached, washed-out representatives of the bronzed beauties of the South. Yet are his pictures clever, well grouped and generally well drawn, wonderful in detail and delicate in touch. No labour is spared, and the very errors are rather those of mistaken ability than inability. His Halt in the Desert (248), Camels and Bedouins, Desert of the Red Sea (305) and Roman Peasants at the Entrance to a Shrine (341) are alike admirable, for a pen-and-ink-drawing sort of Art. His texture is generally very critix and meagre.

texture is generally very gritty and meagre.

Mr. Copley Fielding proves his industry and versatility of mind by a flock of admirable land-scapes. His Langdale Pikes, near Ambleside, Westmoreland (10),—Folkestone Cliffs (19),—View looking over Menteith to the Islands (30),—View cooking over activation to the status (30),—Yere over the Clyde from near Greenock (39),—Views in the South Downs (60), (63), and (128),—Ben Nevis seen over Loch Eil (67),—Glen Lochy at the Head of Loch Tay (80),—Goodrich Castle, Herefordshire (143),—Scarborough, Yorkshire (130),—Snowdon, from Capel Carig (138),—View of Ben Venue from the Trossachs (139),—Scene near Inverosan, West Highlands (140), &c.,-are all excellent in atmospheric effect, and in admirably preserved and graduated distances. The skies are rich in cloudy depths; and instead of mere rainy washings, as full of variety and mottled tonings as the land. His trees are not much elaborated, nor his foregrounds very bold; but every touch in both seems to aid feeling of the hour and day, and to be true to climate and situation. His 'Scarborough' is most beautiful in its effects; but is less poetical than Mr. Smith's. In the latter picture, the town, bright and sunny, opens like a vision between the dark cliffs on either side; and beyond, is the strong sea, that drifts restlessly its transparent tawny crestings in the foreground. For distance, though less pic-turesque, may be noted his 'View near Stirling,' looking from Menteith over the low country to Ben Ledi, with Ben Venue blue in the distance.

Mr. C. Branwhite is more than usually suc

Mr. C. Branwhite is more than usually successful. We have seldom seen anything so good from him as his Scene on the River Conway, North Wales (16). The water is turned to sapphire by the sky it environs, and melting into green, dusky depths where the trees cast their reflections. The leafy, vibrating foliage, admirable for contrast and lightness, and the purple rocks of the foreground, make a picture truthful, not merely as to the form and colour, but also as to the poetry and associations of the scene.—More startling than this calm scene, in its purpled snow and broken ice, is Winter, Sunset (38), remarkable for the frosty red in the horizon, and the church tower growing dim in the twilight. In certain effects this picture has scarcely been surpassed.

Mr. Richardson is as glowing as ever in his Italian scenes. Vale St. Nicolia, on the Range of Mount Rosa (14) is grand in its mountain range and firm richly-coloured figures.—Sowento, from the Capo di Monte (25) is gorgeous in its daring azures and its powerful contrasts of colour. Under our own rainy skies, such splendour appears a thing of fable rather than reality.—Mr. W. C.

Smith has some very commendable pictures. His Bay of Uri, Lake Lucerne (61) is excellent, from the well-maintained balance of the light and shade of every part, as well as from the intrinsic beauty of the scene. The water is rather wanting in breadth, and somewhat timid in treatment.—Mr. E. Dunand somewhat timed in treatment.—Arr. E. Dun-can is glowing and luminous in his Vraicking Harvest, Guernsey (40),—and deceives the eye with the semblance of oil.—Mr. W. Evans is fully equal to himself; but is less happy in his subjects than he was last year. His sketch in Glen Tilt is beyond the ordinary power of an amateur; but is rather cold and dull.—Mr. Alfred Fripp in his Capri (72) is hard and marbly. It is difficult at first to dis tinguish rock from cloud; and there is a want of air and distance .- Mr. Naftel in his Stones of the Lym (118) is clever; but there is a want of finish and of loving labour; which is particularly necessar where the colour is necessarily monotonous.—Mr J. Nash is as lucid and firm in touch as ever. His Abbaye St. Arnaud, Rouen (188) is less picturesque than Prout, because more architectural, measured, and definite. We have no crumbling stone or weather stains; and there is more of the engineer draughtsman about Mr. Nash; and everything looks newer, harder, and more glossy. He is unduly fond of a certain bronze colour, which grows ome on repetition.

Mr. W. Hunt's Fruit, &c. (273) is no perceptible advance:—in fact, it is difficult to imagine more exquisite enamelled finish, or more attention to local colour and detail.—Mr. Dodgson is clever, but careless. His best work, Sunny Hours (176), is a dissolving view that seems to fade as you look; and yet attracts, from a certain ill-used talent, which will not do its best.—Mr. John Callow is very natural in his sae effects. Messrs Gastineau and Fripp are well deserving notice—and Miss M, Gillies's Mourners (182) has much earnest feeling in the upturned faces.

EXHIBITION OF FRENCH PAINTINGS.

THE first annual Exhibition of French Paintings opens to-day, at the Gallery, 121, Pall Mall, under the auspices of several English lovers of Art, amongst whom Messrs. Stanfield and Maclies occupy a prominent place. It consists of a small, but choice collection of modern pictures by living French statistics.

The two places of honour are occupied by Messrs. Vernet and Scheffer. The masterly facility and picturesque richness of the former is conspicuous in his Chase of the Mouflon, an Algerine scene, powerfully painted, and in his freshest and best manner. The moufflon, a sort of large chamois, is bounding over a rock, in front of the spectator, and close upon it press two hunters, one a gor geously attired Arab, and the other a Nubi attendant. The matchlock of the former is already up to his shoulder, ready to bid fire and lead do his errand. Nothing can be fuller of motion, more spirited, or more vigorous; but the handling of the grey horses and of the moufflon is less daring than Landseer's finest efforts; the texture is thin, and the colour rather opaque. It has been already exhibited at the Palace by the Queen's particular wish .- Equalling Vernet in a very different walk of Art comes Scheffer, with one of his most graceful, solemn, and poetical works, Fran-cesca da Rimini. All the pathos of this, the sweetest and most tender love story, the briefest sweetest and most tender love story, the brease ever penned, was in Scheffer's mind when he painted the tear-drops, lying scattered over that lovely pallid cheek, like cold dew-drops shock from a lily. The flesh is very Corregiesque in treatment, and free from the usual umbery dusky-ness of the French school;—the faces are beautiful, and of a beauty well contrasted;-the figures of Dante and Virgil, in the background, being admirably toned down to the pale cast of thought that surrounds the whole. There are here, also, several smaller works by the same artist, full of religious feeling, and sombre without being heavy. The Dead Christ and Conversion of St. Augustine are intense in feeling, but feeble in the modelling and general mechanism. Paul de la Roche has a good copy of his fresco, from the hemicycle of the Ecole des Beaux Arts, representing Phidias, Ictinus, and Apelles sitting as judges, surrounded by the

artists o nins 0 The drav classical, admirabl sends a g two feet upon his small ba Prodiga a sort o two mis an eye has alrea streaky a Duboeuf. landscap heur,--every pr moor in mounted boldly co Pink De colour ar are light very rich and well tone.-T Danhnis and the Jadin's colour, a Windmi

artists of all ages, while before them kneels the genius of Art with wreaths ready to distribute. artists of all ages, while before them kneels the genius of Art with wreaths ready to distribute. The drawing of the figures is correct and severely classical,—the faces, nearly all portraits, are very admirable in expression.—Biard, the humourist, sends a gigantic caricature of Gulliver in the cornfield in Brobdignag, groping about among poppies two feet in circumference, with dragon-flies, three times as large as life, buzzing about his ears, while the huge hand of the reaper is descending upon him through the corn-stalks, each as big as small bamboos. He has also several other small pieces of humour.—M. Muller has treated The Prodigal Son in a modern way, dressing him in a sort of Gil Blas manner, seating him between two mistresses, who, while they fondle him, keep an eye on his purse, into which one of them has already slipped her finger. The texture is streaky and disagreeable.—The Widow's Mite, by Dubeuf, is boldly painted, but dull and heavy in tone.—One of the curiosities of the Exhibition is a breaky and disagreeause.—The Wield's Amer, or Dubeuf, is boldly painted, but dull and heavy in tone.—One of the curiosities of the Exhibition is a landscape with cattle, by a lady, Mdlle. Ross. Bonheur,—probably one of the most powerful paintings every produced by a female hand. A drove of dark buffalo-like oxen are passing over a dreary moor in Brittany, under the charge of a herdsman mounted on a white horse. The chiar-occuro is boldly conceived.—The best head exhibited is A Pink Domino, by M. Beaume, very pleasing in colour and in effect.—The flowers of M. Greenland are light-and graceful, and very fresh, though not very rich in colour.—M. Guet sends The Departure of the Aposites at the Foot of the Gross, an academical and well-drawn picture, but black and heavy in tone.—The best pastels are by M. Brochard. His Bonday's and Chlos is admirable for its warm tone tone.—The best pastels are by M. Brochard. His Daphnis and Chloe is admirable for its warm tone and the beauty and innocence of the faces .- M. Jadin's landscapes are poetical in feeling, fine in colour, and full of judicious detail.—M. Hoguet's coour, and min of judicious detail.—M. Hoguet's Windmill is pure and careful, and shows much study of the Dutch masters.—A Portrait of the French Emperor, and other works of less eminent men than those whose names we have given, constitute a very good Exhibition.

ON ENGRAVINGS.

Some would be led to imagine from the desul-Some would be led to imagine from the desur-tory exhibition of engravings that there was an interest in them apart from their reproduction of artistic design. This, which can only occur in the limited sense of grapho-mania, or intense connoisseurship of incised lines and effects, is as nothing to the ordinary mind, which only receives nothing to the ordinary mind, which only receives pleasure from engraving in proportion to its faithful and striking presentation of the original pictorial tale on which depends its interest as a separate work of Art. Its special attractions are corollaries of and supplementary to a work which it only partially professes to translate. Any excellence exhibited in engraving which does not minister immediately the profession of the profession diately to its pictorial quality, belongs to that re-gion of endeavour which has only the technically learned for appreciators; whereas those which bear directly upon the exaltation of the design are felt by all in the proportions of their knowledge in Art.

Engraving cannot improve painting, although an engraving may improve upon a particular pic-ture. If we suppose each to be perfect in its sphere, the translation into black and white can only be a part copy by a toilsome process, where uniform tex-ture of surface has an equal mixture of advantage and disadvantage. If this uniformity on the one hand allows the eye to glide serenely over the work, on the other it destroys that variety which gives inother other it destroys that variety which gives in-ionaity to individual parts. It is true that none of the surface failings of the painter are visible; the starved or slightly streaked shadow betraying the canvas texture, the grossly loaded light, the film grey, the brown, yellow or horny local tints, the contour outlined incautiously with a staring or fable tone,—in fact, all the errors of week or prelices recent in account of the property of the party reckless execution are subdued by the uniform procoases execution are subdued by the uniform pro-cess of the engraver. But these have their coun-terparts in engraving:—the rotten surface, the in-firm or gross line, too acutely cut or inharmo-siculary thrown, the smoky shadow or trenchant light, or suffused local tone, the unaired sky or

or the graver by tone and texture, all the painter's errors may be reported in engraving. Thus, then, there is really no peculiar excellence in engraving which shall make it a thing by itself to be considered irrespective of its faithful reportership, to be thrust before the public eye by the unenlightened craving of the engraver or the blind

speculation of the publisher.

It is easily understood that the lovers of animals It is easily understood that the lowers of animals may delight in transcripts of their favourites, or that the world at large may find pleasure in beholding the graceful forms and agreeable colours of noble beasts. But wherefore speculation should run upon the perpetuation and multiplication, in black and white, of a coloured work representing three horses' heads drinking, about to drink, or having drunk, we are at a loss to conceive. It may be said that people are fond of animals; if so, let them gaze upon them wherever they may be found.

Ample justice should be done to English en-gravers, who, if they have been shackled some-what with the restrictive laws of their craft, have what with the restrictive laws of their craft, have boldly met the difficulties and triumphed. But what shall we say to the publishers who have cast bewilderment loose upon the confiding public in the shape of a score of deterring invitations of proofs on this and that paper, before or after the letter, in skeleton letter, in black letter, artist's proofs, &c.? Cupidity may multiply this perver-sion of the language of distinction and attraction until the most contemptible trifles are made legiti-mate sources of sneulation and profit. It is mate sources of speculation and profit. It is losing sight of the broad love of Art, and basing loaing sight of the broad love of Art, and basing patronage upon the love of distinction. He who possesses a print must sit down crushed by the aristocratic possessor of a proof, and he again be consigned to despair by the sovereign owner of a first proof on the largest paper in the world, before even the title to be engraved was conceived by the fertile mind of the public-pulse-speculator—the royal publisher. These modes of giving adventitious interest to the objects of speculation may be considered, by minds used to the wiles of competition, as pardonable detactivities and of competition, as pardonable dexterities and innocent appeals to public credulity and vanity. No opinion can be offered by the advocate of high themes and national credit upon dextrons man-cuvres and individual advantages. We are sim-ply working out the reasons why works of a fine character are seldom engraved in England, and character are seldom engraved in England, and wherefore prices are so enhanced by worthless expletives as to preclude the possibility of the humbler classes participating in this benefit of an interesting branch of the Fine Arts. When the publisher grumbles at the expense of copyright, he complains of that which the theatrical bookseller ungrudgingly allows. The artist of a high work is seldom paid for his picture an adequate price, and the tax levied on the public in the shape of copyright is but the completion of the payment copyright is but the completion of the payment due to a meritorious performance. But, as the current runs, the more fashionable the picture,— that is, the more exclusive it is, either adapted to a coterie or a nation, the higher the price of the copyright. We believe we may affirm that the 'Wellington Banquet' enjoys the distinction of having obtained the highest, and none will say that above twelve hundred pounds was not fully equal to the copyright value of some very noble equal to the copyright value of some very noble historical picture. We feel confident that no pub-lisher would give this sum for an abstract work of Art; nor is he to be blamed, seeing that the English care very little for the patronage of painting, sculpture, or engraving in their higher

ing, sculpture, or engraving in their higher branches.

The fault of a low state of Art reverts, then, to the tastelessness of the Anglo-Saxon race—a race bewildered by the lavish encomiums upon its greatness, as though that eternal, unvarying type of the unattainable aspiration had its cradle in avail at an area of the control of the property of t to the tastelessness of the Anglo-Saxon race—a race bewildered by the lavish encomiums upon its greatness, as though that eternal, unvarying type of the unattainable aspiration had its cradle in rapid steam-engines, victorious fleets, unconquerable legions, and advertised charity. We have already pointed out the petty social vanities which operate so powerfully against permitting Art to be the bequest of genius to the mass of mankind; but we have a far mere stubborn task!

crackling foreground, or rampant accessories. The sins of colour being translated into the language of the graver by tone and texture, all the painter's errors may be reported in engraving. Thus, then, there is really no peculiar excellence in engraving the English mind that in its pursuit of manliness it runs the risk of neglecting refinement. How few amongst us cultivate language as the exquisite instrument of the emotions and thoughts! We make life a hurried pursuit, and expression a telegraphic communication. The best wish is a curt offer, and sympathy a time bar-gain. We catch up low conventionalism, and try rather to assimilate ourselves to the inferior standard, by which we may become popular, than to raise our hearers by fresh and valuable originalities.

To such minds, therefore, the celectricism of Art is an affectation of the sublime and beautiful. Ancient themes are obsolete, abstract ones are inconceivable: the clamour of the day is for the new, conceivable: the clamour of the day is for the new, forgetful that if the new, as it is called, were represented by the tones of the highest aspiration it would fall on heedless ears. Without desiring to cultivate the morbid sentimentality which can permeate its nature with florid melancholy, or lose all sense of time and duties in imagination's attractions, it may still be desirable to awaken that lively sensibility which can distill the true and beautiful from the forms and manifest of all this course. from the forms and meanings of all things, and obtain such power over the vagrant perceptions as to be enabled to dwell emphatically upon the

to be enabled to dwell emphatically upon the object and subject of scrutiny.

Baltic and Spanish Main, two excellent merchants, patronize (as they call it) the Art-Union, paying their subscriptions with undoubted patriotism, bleeding (as we say in 185—) for the good of their country's Arts. Could we not by a little gentle pleading urge them to consider that they really do, or ought to, profit by their patronage so much that in the guise of that virtue their actions become dubious; or is it that they never for five minutes together tried to understand the nature minutes together tried to understand the nature of their purchase? Have they ever dreamed of the mute eloquence of these "commonplace things," "which one meets with in every other house"? Have they ever ransacked their own depths so as truly to know what is in them and what they can add to and abstract from a suggestive work of Art? Have they ever sought the meaning of a pietured thing with half the zeal which they have devoted to an unrewarding trade bargain or the treacherous merits of an apocryphal pipe of port? We could, perhaps, point out reasons why the will is clogged in honest Baltic and Spanish Main; but we are not licensed to preach against Mammon or the flesh-pots of Egypt. We may say that if the gentle maid Contemplation, sitting in the Empyrean of her starry realm, gazing upon the beautiful forms of abstraction, were to be woodd a little more carnestly she would lend a least core of these woodd a little more carnestly she would lend a less coy ear to the muttered minute guns of these cold suitors. "My dear," says Baltic, "here is another Art-Union. Tell Phillips to get it framed and glazed and put up."—"Upon my word, George," says the lady, "you really do so cumber up the place with those useless nicknacks that not an inch of the new paper of my drawing-room will shortly be seen."

what English Lady can lay her hand upon her heart and not utter a verdict in favour of "the new paper"? Prints in albums may lie upon the table because they are handsomely bound, but if Raffaelle's 'Apostles,' in the honest woodcuts, with a "seedy" cover, were to show their ancient faces they would be consigned to the housekeeper's closet to edify the butler and John upon "the cut of

ancient guys."

Thus it is that finery, born of conceit, and ignorance, wrapped in indifference, go strongly on to stem the march of improvement, whilst the haste and improvidence of trifling recreation combine to stamp intellectuality as a bore and true refine-ment as an affectation. Nor is our indifference to the true qualities of Art shown alone in neglect. Our fosterage carries with it something equally device, or that a clear print has an advantage over a clogged one; but none, likewise, will venture to assert that the essential soul of the pictorial drama derives valuable lustre from daintiness of modes or delicacy of tints. If in the faint, but faithful, old masterly prints of earlier times we glean the power of conception, vigour of execution, and principle of effect, which distinguish the picture, he must have a Sybaritic eye who sighs for more melting tones, more richness of effect, than is due in a work professing to be a free translation, not a counterpart of the original picture. If this can only be obtained by such an increase in the price of the print as to put it beyond the reach of moderate incomes, the supernumerary excellence is to be regretted. Prints to be teachers must become household leaves.

L.

MUSIC AND THE DRAMA

MISS GUSELDA ARCHER, Pupil of Mr. Aspull, has the honour to announce, that her FIRST SOIREE MUSICALE will take place at the Hanover Square Rooms on WEDNESDAY, the 10th of May, 1854. Vocalists: Miss Dolty, Miss Smith, Miss Adams, Miss Binckes, Mr. Frank Bodda, Herc Smith, Atlant Harr Jeans, Ylolonello, M. Paque; Pinnofort, Miss Guselda Archer. Conductor, Mr. Aspull.—Reserved Seats, 10s. 6d; Single Tickets, 7s.; Family Tickets, to admit Four, One Guines. To be had at the Music Warehouses, and of Miss Archer, 431, Oxford Street.

Mr. AGUILAR respectfully announces that his ORCHESTRAL CONCERT will take place at the Hanover Square Rooms on THURSDAY MORNING, May 11. Vocalists—Madame Hermine Budersdorff from the Berlin Opens), Mille, Maris Sedlatzek (from Viennas), Miss Messent, Herr Kichart and Herr Forms. Voling Richards at the Morning of the Maris Sedlatzek (from Viennas), Miss Messent, Herr Kichart and Herr Forms. Voling Richards The London Orchestra, under the direction of Mr. Frank Mori, will perform among other plees Mr. Aguilar's Concert Overture's Alpheus, 'also his new Symphony and the Overture to his MS. Opera.—Ticketa, 7z.; Reserved Seats, 10s. 6d.; to be had at all the principal Music Publishers, and of Mr. Aguilar, 6s, Upper Norton Street, Portland Road.

NEW PUBLICATIONS.

Marche aux Flambeaux di G. Meyerbeer, arrangée à quatre Mains. Par E. Wolff. (Cramer & Co.)—In many points of view this pianoforte arrangement of the first of three Torch Dances, composed by M. Meyerbeer for Prussian court-wedding festivities, is noticeable. To begin,— we regret that one who presents himself to the public so sparingly as M. Meyerbeer should ever be bound to undertake tasks the interest of which is so special—not to say temporary. A long, slow Polonoise, to be performed by wind instruments while Knights and Ladies carrying torches pace a state apartment in solemn mazes, is written under too many arbitrary conditions to be available for many purposes besides that for which it was produced. The very monotony which adds to its character in its own time and place, makes it scantily acceptable if performed as a concert-piece, or in place of a theatrical over-ture. It is curious, again, to see how the mark of M. Meyerbeer is stamped on this composition. Everywhere else fragmentary by predilection,fragmentary by necessity (else how is it that we have no good overture from his pen?)—he is flow-ing, continuous, sustained in his ballet music. The alternate recurrence and cessation of a dancing rhythm seem necessary to constrain and to set him free,-by rendering it impossible for him to seek out those perpetual changes, which in his other music are so apt to distract the attention and unsettle the interest of those with whom his style is unfamiliar.

—Then, this "Torch Danco" is indefeasibly M. Meyerbeer's in its rhythm. He has been hailed by many critics—M. Fétis heading the company as a rich innovator in this department of music: we fancy the novelty less various than has been asserted. As regards this "Torch Dance," asserted. As regards this lored Dance, for instance, its peculiarities of form were intimated in the Court Minuet opening the last act of 'Les Huguenots,'—and again in the 'Pas de Redowa,' in the third act of 'Le Prophète.' Now, that the triple tempo—if used for the purposes of parade or measured movement—issusceptible of many modifications or subdivisions, has been proved by Chopin in his *Polonoises*,—and, more individually, by M. Berlioz in the 'Menuet des Follets,' in the third part of his 'Damnation de Faust.' In truth, the Prussian master might be brought in by verdict guilty of as many mannerisms, in this presumed field of discovery, as Rossini himself,—who, be-

cause he perfected an intoxicating crescendo, and certain irresistible forms of florid melody, so long sat under classical censure as a frivolous creature, who could do nothing else, and who, by a trick or two, had got the ear of the public.—We have no meaning by these distinctions to detract from the merit of "the man of our day,"—but simply to prevent praise from "staking itself on the wrong card," and thus making preparation for certain future recoil and under-valuation. That which is great in M. Meyerbeer will be found in this "Torch Dance," as in his more universal works: brilliancy of phrase—largeness of idea—ingenuity and contrast of decoration:—and this movement, as here reviewed, be it remembered, is no original composition,—but an arrangement by which we are precluded from forming any idea of the effects of sonority which, we doubt not, give to the work in its original form pomp, splendour, and character.

PHILHARMONIC SOCIETY .- In one of Dr. Moore's novels is to be found the angry gentleman who, unable to let his house, declared that "people should gain nothing by that," and, accordingly, raised the rent of it every year. This resolute person might have been selected for type and pattern by the Philharmonic Directory of 1854, since four concerts are now over, during which we have had but one real novelty. —We are perfectly aware that, by way of excuse for such supine pro-ceedings, the Directors would appeal to that portentous personage, "the old subscriber,"—but then we may naturally ask whether moderately old, very old, or curiously old taste, is to decide the selections Such phenomena exist as critics who, writing of the Philharmonic Concerts, recommend that Beet-hoven's Symphonies and Concertos should be shortened, because of their oppressive length,—as dilettanti, who wince and call for ear-cotton if the overtures to 'Leonora' and 'The Ruler of the Spirits' are wrought up with spirit, -as amawho are affronted on hearing an Allegro go faster than their own moderate bows or placid fingers can play it. Which of these is to set the limit,—to choose the master,—to apportion the amount of orchestral brilliancy,—to act as metronome in settling the tempo?

To state our objection otherwise,-this determination on the part of the Philharmonic Directors to make of their entertainment an instrumental Ancient Concert is a novelty,—though not the one we desire. Time was when the timid and the tepid were subjected by the ruling powers to the gentle pressure of experiment in search of progress. It is this very Society now pleading precedent, classicality, and other goodly excuses, that gave to "that blatant Beethoven" (so the fossil amateur of 1816 may have styled him) a commission,—that opened its gates "to that wild Weber,"—that installed Mendelssohn, when he was merely a stripling composer, in its concertbills. No one can represent us as among the destructives who regard every piece of ugliness hitherto unwritten as a new discovery,—while we demand that now, as heretofore, the recent instru-mental music of Europe should, without prejudice to existing masterpieces, be introduced by one of the leading instrumental Societies of Europe. Our demand, too, is capable of being justified by immediate suggestions. Why (to specify) should not we have heard more of Herr Gade's music this spring, remembering how favourably, last year, his Symphony was received?—Then, as regards recognized masters who are becoming "ancients," how does the Philharmonic Directory fulfil its mission by standing still—instead of going backwards ?—A sight of the Leipsic edition of Cherubini's scores, the other evening, reminds us to ask why we are never to hear his overtures to 'Elise,' to 'L'Hôtellerie Portuguaise,' to 'Ali Baba,' to 'Les Aben-cerrages,' at the Philharmonic Concerts? Nay, why have Beethoven's triple Concerto and his simpler pianoforte Concerto in B flat never been played during the last twenty years at these Concerts? Inquiries and examples like the above could be multiplied ad infinitum; -it could be shown, too, how, by only a very moderate alertness and vigilance, the subscribers by tradition could feast their

fill, while the new comers might have something "to have or to leave." But enough is said for the moment,—the more, since from all appearances it is not said for the last time.

The novelty of Monday evening was a Symphony by Herr Rosenhain:—why chosen, when so few novelties seem to come to a hearing, it is not easy to divine, -- since at best it can be called a school work, in the larger part of which not very fresh ideas are carefully rather than originally treated. The sombreness of the key—r minor—is of itself a disqualification and drawback:—but the theme of the slow movement is tuneable. The last allegro, though bordering on the bizarre in the working of its themes, pleases us the best, since there orchestral contrast is produced, not without ingenuity.—The reading and rendering of this long and complicated work were in the highest degree creditable to the Philharmonic orchestra. The rest of the concert, for those who prefer favourite music, was interesting and excellently performed. Herr Molique's violin Concerto in A minor, with its elegant slow movement and quaint rondo played by its composer, was cordially relished. Signor Belletti's singing of the well-worn 'Vedro mentr' io sospiro' (from 'Figaro') well merited its encore. Madame Novello did her best with the noble temple scene from Gluck's 'Alceste,' and her voice is in its prime. But the music is above her powers of poetical conception; and were it ever so poetically declaimed, much of its effect must be lost in the orchestra. Moreover, the pieces given were two airs, without their connecting link,—so that the heaviness of a monotony not belonging to the composition was added to a scene by its nature too severely dramatic to bear the slightest extra solemnity or length.

Musical Union.—Mr. Ella's meetings for the season were excellently inaugurated, so far as the performance of Haydn's Quartett in D (Op. 70) and Beethoven's Second Razumouffsky Quartett (the impassioned one in E minor) were concerned. Herr Ernst was first violin; of his supremacy in this capacity the Athenaum has nothing new to say—and well associated with him were Herr Goffrie, Mr. Hill, and Signor Piatti.—The performance of Mendelssohn's pianoforte Trio in D minor was nothing short of bad so far as the leading instrument was concerned. The tempi were broken without excuse—the reading was spiritless—and the passages were given without accent, neatness, or brilliancy.

MUSICAL AND DRAMATIC GOSSIP. spectus of the Drury Lane Opera, which was issued on Monday, runs as follows:—The operas to be given during the season are, in German—Fidelio, (Beethoven);—Seraglio, Don Giovanni, Zauberflöte (Mozart);—Huguenots, Il Prophete (Meyerbeer); -Der Freischütz, Oberon, Euryanthe (Weber);-Massaniello (Auber); - Wassertrager (Cherubini); -Der Vampyr (Lindpaintner). In Italian-Iphigenia (Gluck);—Semiramide (Rossini);—Ernani, Il Trovatore (Verdi);—Norma, Sonnambula, Puritani, I Capuletti e Montecchi (Bellini);—Lucrezia Borgia Lucia di Lammermoor, Elisir d'Amore, Don Pasquale, Don Sebastian (Donizetti). The principal singers at present engaged for the execution of these works are, Soprani—Mesdames Caradori and Doria, Mdlle. Sedlatzek, and Mesdames Ruders-dorff and Köster (from the King's Theatre, Berlin); Contralti—Mdlle. Vestvali and Miss Fanny Huddart ; Tenori - Herr Reichart, Signor Pavesi, Herren Reer and Theodore Formes; Bassi Baritoni—Herren Pischek and Pasque, and Mr. Hamilton Braham; Bassi Profondi—Signori Arnoldi and Gregorio, and Herr Formes. To execute so many Italian operas as are contained in the above list the provision of Italian singers may strike others besides ourselves as meagre. On the other hand, there are to be three conductors-Herren Lindpaintner and Anschuez, and Dr. Wylde,—the last gentleman, so far as we are aware, being inexperienced in the preparation of theatrical music. brief, the prospectus seems to us more random than well considered; and we wait with curiosity to see how far it can be worked out .- Another word of comment suggests itself. While we notice the odd

ren the pe-

han see l of manner in which French operas are pressed into the German repertory, we must observe, too, that in this the managers of the Drury Lane Opera only follow the German fashion, which at home, too, is more polyglott than patriotic. How much this is the case may be gathered from a short synopsis, given by a contemporary, of recent performances at the leading musical theatres of Vienna. This is, as under.

is, as under.—
"At the German Opera, from June 11th, 1853, to March 31st, 1854, thirty-four operas lawe been performed. Six operas of Donizetti have been giren thirty times; four by Flotow twenty-five times; three by Mozart twenty-one times; three by Meyerbeer forty-six times; three by Meyerbeer forty-six times; three by Meyerbeer forty-six times; three by Autorians; three by Meyer seven times; ene by Belder fifteen times; to by Balfe fifteen times; to by Balfe fifteen times; one by Though four times; one by Kreuzer three times; and one by Spontini twice."

For the present (to return to the immediate business of the hour) it must suffice us to state, that 'Lucrezia Borgia' was performed at Drury Lane on Monday, with Mr. Hamilton Braham as the Duke and Mdlle: Vestvali as Orsino. Of gentleman and lady we must speak on some future occasion.—The German season was to commence on Thursday with 'Der Frieschütz,' in which Herr Formes was to make his first appearance as Caspar.

'L'Elisir d'Amore' was given at the Royal Ita-lian Opera on Tuesday. The early period at which we go to press makes it necessary to postpone the notice of Mdlle. Cruvelli's début in 'Otello,' which was to take place the evening before last, till next

We are told that Madame Persiani, Mdlle. Alboni, and Madame Castellan are all expected in London, with the intention of singing in Concerts.—Mr. Ella's 'Synoptical Analysis' of his Musical Union announces that M. Vieuxtemps intends coming to London in June. We perceive by the Carette Musicale that M. Severt of the Théâtre. coming to London in June. We perceive by the Gazette Musicale that M. Seveste, of the Théâtre Lyrique in Paris, intends to spend his "recess" in London: bringing with him his company, headed by Madame Marie Cabel.—M. Prudent is announced as about to arrive almost immediately. nounced as about to arrive almost immediately.—The Musical Transcript announces that Herr Schallehn, who has been travelling to recruit for the brass band in course of formation for the new Crystal Palace, has engaged a German trumpeter, Herr Schreiber, who is spoken of as extraordinary on his own instrument, and as versatile as extraordinary.

In harmony with our remarks on the policy of our Philharmonic Directors for 1854, we note with pleasure that the Quartett Association is about to include in its opening entertainments two pieces of Chamber music unfamiliar to our two pieces of Chamber music unfamiliar to our Concert-goers—a Pianoforte Trio by Dr. Spohr, and a stringed Quartett by Dr. Schumann. Be these good or bad, the opportunity of ascertaining their merits marks the meeting as interesting.—We must commend the selection by the Sacred Harmonic Society last evening of Beethoven's grand 'Fest-Overture,' Op. 124, performed before his 'Missa Solennis.'

A Correspondent of the Morning Post a few days ago named Signor Ruta as a young com-poser whose opera, 'Lionilda,' produced lately at one of the theatres of Naples, contains pleasing melodies.—We note that Madame Parodi has been singing in Paris the part of Malcolm in 'La Donna singing in Paris the part of Maccoum in La Donna del Lago. If her self-knowledge have not arrived too late,—if her voice be not irremediably strained by the attempts to force it upwards, this lady may still do good service in the Italian theatre, especially now, when every contralto beems determined to quit her own voice for heights seems determined to duit her own votes for neights above its natural compass. We advert to Madame Parodi's experiment all the more hopefully, from recollecting that the real success obtained by her in London was in the part of Stefano, the sailor-boy in Halévy's 'La Tempesta.'

The world might well have hoped that "the great Wagner case" had been "gathered to its fathers and mothers,"—that the greed of Mdlle, Joanna's parent, his contempt of England, and the efforts of our rival London managers to secure

Meanwhile, the German newspapers announce that Mdlle. Wagner is giving last representations at Berlin,—some adding, before she comes to Paris and London,—while others assert that she will yield to the temptations of Brazilian managers; —which last are beginning to figure so magnifi-cently in the musical journals as to indicate the opening of yet another market for singers.

The news of the week from Paris is not important. It is worth noticing, however, that neither patronage nor praise in private or in print,

All the King's horses, and all the King's men, failed to make a success for the new Vestale at the from the play-bills there. Mdlle. Rey, who seems to be an expressive rather than a brilliant singer, has made a successful début at the Opéra Comique has made a successful debut at the Opera Comique.—A slight musical piece, by M. Henrion, the well-known composer of romances, 'Une rencontre dans le Danube,' has just been produced at the Theatre Lyrique. Handsome things, though somewhat ambiguous, are said by M. de la Fage, in the Gazette Musicale, concerning a Requiem by M. de Liguoro, of Naples, which has been twice performed in Paris during the spring. It is described as more solid than showy.—M. de Hartog, a Dutch composer, "has arrived in Paris," says the same journal, "to bring forward a marine symphony of his, entitled 'Land! Land!" This work, on a large scale, is composed for teno voice, on a large scale, is composed for tenor voice, chorus, or orchestra, on a poem by MM. Augier and Barbier."

MISCELLANEA

Postal Anomalies.—If you want to send a periodical cheaply from Calcutta to Delhi, send it by London; it will be charged eightpence for the 8,000 miles home, and as much for the same distance back; while for the 800 miles direct it will be charged two rupees, or four shillings. The land carriage from Calcutta is the same in both cases, only in the cheaper one the periodical has the advantage of 16,000 miles sea voyage.—Journal

of Society of Arts.
Solar Rings and Mock Suns.—An interesting phenomenon commenced at 5.45 P.M. April 24, and lasted until 6.40. It consisted of a circle of light of 46° in diameter, which had the sun for its centre; of 46° in diameter, which had the sun for its centre; three mock suns were situated on this circle, the one at the apex, and the others on the east and west horizontal level of the sun. These mock suns had long tails proceeding from them in a direction diametrically opposite to the true sun. A secondring (of which about 190° of the upper half was visible) of 90° in diameter, also having the sun for its centre, on which were two other similar mock suns, situated on the sun's horizontal level; and a third ring of 45° in diameter, the centre of which suns, situated on the sun's horizontal level; and a third ring of 45° in diameter, the centre of which was situated at the apex of the first-mentioned ring, and the base of which passed through the true sun. The rings and the five mock suns were faintly tinged with prismatic colours. Cumuli clouds near the phenomenon. After sunset cloudless.—E. J. Lowe, Highfield-house Observatory.—

A Tunnel under the Ohio.—In all the large towns on the Ohio and Mississippi rivers, there have been, at various times, discussions upon the subject of bridging those streams. But the great obstruction to river navigation created by bridges, unless they are built at a very great elevation and great expense, has prevented their erection in all the western towns except Wheeling. The question of bridging the Ohio has latterly been agitated in Clinically in order to their expense. Cincinnati, in order to obtain a travelling commu-nication with Covington, Kentucky. To obviate the inconvenience of such a course, a plan for an iron tunnel under the river has been submitted to the efforts of our rival London managers to secure the Berlin Fides, had been disposed of finally.

But last Saturday's report of proceedings in the Common Council of Court of Queen's Bench set forth that the plaintiff build a tube of iron of any desired dimensions, and paper?—Punch.

has obtained the grant of a "rule calling on the defendant in Lumley v. Gye to show cause why a new trial should not be had," on grounds stated, &c. So that this last revival of 'La Prova' is "to run" for some months longer, it would seem. entirely avoiding the use of coffer-dams. There is no question about the practicability and superiority of iron tunnel over all other materials, besides of iron tunnel over all other materials, besides being about 50 per cent. cheaper. I put the footway in the top of my arch, the arch being as near a parabolic curve as practicable, combining strength and cheapness. If it is proposed to lay down a railway through the tunnel, I would propose putting the track on the top of the arch, in place of the footway. I should not, in any event, recommend running locomotives through, but simply the cars, by atmospheric pressure, as has been the cars, by atmospheric pressure, as has been done in other instances. This would dispense with the necessity of a footway, as passengers could go through very expeditiously by the cars. I also propose to make the approaches all of iron, as being cheaper and safer."

A Literary Dog.—There is a dog in Liverpool that visits all the newspaper offices every day. He generally honours our establishment with his first visit. For some hour or hour and a half he reclines on the flags on one side of the doorway,

arst visit. For some hour or hour and a-half he reclines on the flags on one side of the doorway, eyeing the passers-by, and each person who enters. Then he rises, and proceeds to the next adjoining office, the Standard, where, having gone through the same observance, he repairs to the Mercury, and again renews his apparent penance. Thence he goes to the Albion, the Journal, and the Times, at each of which places he similarly spends about the same space of time, which completes his daily gyrations. It is surmised that he is the dog of some defunct newsman.—Liverpool Courier.

Paper Wonders.—That man is grass is, of course, a solemn truth, solemnly received; but that nettles should be paper is a bit of news that will startle the millions. Nevertheless, the Gardeners' Chronicle declares that "nettles, and mallows in particular" make excellent paper. "The common stinging-nettle" has a splendid fibre, and in Germany has been made into first-class paper. At this very hour the world is so prosperous, so well-to-do and well dressed, that commerce cries in vain for rags to feed the paper-mills. And here are millions and millions of reams of the green material—the much-abused and long-neglected nettle—idle growing in ear very divides. millions and millions of reams of the green material—the much-abused and long-neglected nettle—idly growing in our very ditches. Will not Mr. Gladstone look liberally, scientifically at this enormous waste of greenness—this dreadful sacrifice of vegetable power? The Gardener declares that the fine old English stinging-nettle possesses a fibre "scarcely inferior to hemp." Hear that, Nicholas; and tremble at the rod of nettles in store for the chastisement of Russian trade! The like cheering authority also assures us that the Snanjab broom chastisement of Russian trade! The like cheering authority also assures us that the Spanish broom (Spartium junceum) makes first-rate paper: but this scientific fact, we doubt not, has long been known to Spanish statesmen; all Spanish bonds having been printed on broom paper, that they might be swept out of the Spanish memory as cleanly as possible. Be this as it may; let us as Britons rejoice in the possession of our never-failing crops of British nettles, ready to be converted into "first-class paper." And there is a hopeful moral, a comforting assurance in this discovery, that at length does justice to the scorned, abused, neg-lected, "common stinging-nettle." A thing growing in ditches; a wounding, irritating, wicked weed, stinging men, women, and children—it has still grown with a name for unmixed badness. still grown with a name for unmixed badness. And now, this thing of ditches shall be gathered, and steeped, and daintily manipulated, and come forth to the world, in its revealed self, the whitest, purest paper! Beauty that would squeal at a touch of the saw-edged leaf of the "common stinging-nettle" calling it a cruel, odious thing—may now lay her hand upon the purified leaf—(its could of whiteness and innecesse evolved from its soul of whiteness and innocence evolved from its soul of whiteness and innocence evolved from its green, acrid body,)—and, tracing thereon gentlest thoughts for eager, happy eyes, may bless the common stinging-nettle. Let no man, undeservedly cast down and reviled, despair;—for even nettles—common stinging-nettles—are looking up. When will Mr. Gladstone permit Mr. Disraeli to address him on a note of "first-class paper," i. e. nettle-

Discovery of Coins.—A very extraordinary dis-covery was made by a labouring man in the neigh-bourhood of Coleraine the other day, while cleaning out a ditch. He found an urn containing 1,937 coins, together with 341 ounces of silver, in pieces of various sizes. The coins are Roman, in the most perfect state of preservation, of the most antique description, and what is very singular, no two coins appear to bear the same superscription. The silver is composed of a large number of weighty ingots and oranmental pieces, supposed to have been used on armour for horses. There are also several battle-axes, marked with Roman characters. The whole is now in the possession of Mr. James Gilmour, watchmaker, Coleraine, where

they may be seen by any one curious in the science of numismatics.—Colorains Chronicle.

Music of the Esquimaux.—The voices of the women are soft and feminine, and when singing with the men, are pitched an octave higher than theirs. They have most of them so far good ears, that in whatever key a song is commenced by one of them, the rest will always join in perfect unison. After singing for ten minutes, their key usually falls a full semitone; but few of them can catch the tune as played by an instrument, which makes it difficult with most of them to complete the uniting of the notes, for if they once leave off they are sure to recommence in some other key, though a flute or violin be playing at the time. There is not in or violin be playing at the time. There is not in any of their songs much variety, compass, or melody. Unharmonious as they may appear to musical ears, they are pleasing when sung in good time by a number of female voices. The most common is that in which the well-known Greenland chorus, 'Amna Aya,' commences the per-formance, and is introduced between each verse, constituting five-sixths of the whole song. When the words of the song are introduced, the notes rise a little for three or four bars, and then relapse again into the same hum-drum chorus as before. again into the same num-drum energs as before, which, to do it justice, is well calculated to set the children to sleep. The words of the composition are as interminable as those of 'Chevy Chase,' for the women will go on singing them for nearly half an hour, and then leave off one by one-not with their story, but their breath exhausted. They have a song second in popularity to the preceding, varying from it very slightly in the tune, and accompanied by the same chorus, but with different words. That which ranks third in their esteem is the most tuneful of any of their melodies. The termination, which is abrupt and fanciful, is usually accompanied by a peculiar motion of the head, and an expression of archness in the countenance, which cannot be described by on the countenance, which cannot be described by words. There is only one verse in the song, and that, from its commencing with the word "pilletay," is supposed to be a begging one. Of the meaning of their songs in general, from the imperfect knowledge of their language, little is accurately known. From the occasional introduction of the words "sledge, canoe, spear," and others of that class, it is conjectured that their own exploits, by sea and land, form the principal subjects. The by sea and land, form the principal subjects. men seldom sing, and probably consider it unmanly. If they sometimes commence, they generally leave the women to finish the ditty. Their province seems rather to invoke the muse of the women at the games .- Musical Transcript.

ENCYCLOPÆDIA OF THE WAR:

A NARRATIVE OF THE CURRENT EVENTS OF THE

WAR IN THE EAST.

Compiled from Official and other Sources.

'THE ENCYCLOPÆDIA OF THE WAR,' as its title im-plies, proposes to furnish the public with every information con-nected with the deeply interesting subject which is now engrossing the attention of the whole civilized world.

In History it will record every passing event of importance, jotting down those interesting particulars which daily transpire through the press, and which from their value may deserve to be rescued from an ephemeral existence.

n Geography, full accounts will be given of every place in the Seat of War, towards which public attention during the month may have been particularly directed.

and agree occurrentation directed.

BIOGRAPHY, annotations illustrating the character, services, &c. of those whom passing events may render conspicuous, will be supplied.

4. Every information bearing upon the Statistics of the War will be carefully compiled. Authorite Augments of acts of gallantry, &c., which it has been so often observed renders history stranger than fiction, and with which the records of our past wars so plentifully abound, will be faithfully chronicied.

6. No exertions will be spared to obtain the most faithful descrip-tive narratives of such battles as may be fought.

With No. 1 will be presented a MAP and PLANS illustrative of The War, including

THE BALTIC and BLACK SEAS.

With an early Number will be presented a SUPPLEMENT, containing a Summary of all the Important Papers connected with the War, communicated to Parliament.

When the War shall have been brought to a close, a Preface to this work will be given, reviewing the progress of the events detailed. This will render the ENCYCLOP ZEDIA a complete and lasting record of what may be the most exciting and momentous period in the World's History.

SELF-PROTECTING LIFE ASSURANCE. INDISPUTABLE LIFE POLICY

THE INDISPUTABLE LIFE POLICY
COMPANY have introduced a plan of Assurance, whereby
he following important advantages are secured by ORE POLICY:

1. The payment of a principal sum to the Assured himself at a
pecified age.

2. An annuity to commence at that age.

3. The payment of a principal sum in the event of death, whenver that may happen. of all sums paid, although the Premiums
4. The full benefit discontinued.

5. Relief from the payment of Premiums after a specified age.
6. Small periodical payments, so as to suit the convenience of
ke Assured.

The Premiums are made payable constraints.

S. Relief from the payment of Premiums after a specified age, d. Small periodical payments, so as to suit the convenience of the Assured.

The Premiums are made payable quarterly, half-yearly, or yearly; but by the arrangement with an activate of the Comment of the Assured.

All these advantages are obtained by One Policy; and there is no sacrifice of any sum that has been paid incase the party should not continue his payments.

As an example, a person aged 25, by paying 14a quarterly, will secure 50; payable to himself on his attaining 60 years of age, and an Annuity of 10 or reaching that age and happen after he has trade the first payment), the 50, will be paid to his representatives. By doubling the Premium the sum assured will be 100t, and the Annuity 90. If, in place of fixing upon the age of 65, the Premium of Assurance for 50t, and an Annuity 91. We in place of this purpose of the payment of 10. would be 31 its 50 yearly. As an example of 26, payable on attaining 60, and to continue the heavy of 20, payable on attaining 60, and to continue the happen after the payment of 120 yearly able on attaining 60, and to continue the happen after the payment of 120, fayable on attaining 60, and to continue the happen after the payment of 120, fayable on attaining 60, and to continue the happen after the payment of 120, fayable on attaining 60, and to continue the happen and 120 of Premiums only until he reaches 35 years of age, in such case the Policy will remain effectual to the extent of 37.4 4.8.4, and an Annuity of 5.8 s. 106.

ALEXANDER ROBERTSON, Manager.

Annuity of 5t. 8s. 10d.

ALEXANDER ROBERTSON, Manager.

London, 72, Lombard-street.

RALIWAY LIFE ASSURANCE, BY ONE PAYMENT.

THE INDISPUTABLE LIFE POLICY
COMPANY scant Policia to Members of their own Company,
assuring against first hydricate the Property of the No.
SUM OF POUR SHILLINGS PER CENT. Thus, a person
aged 30, who has an ordinary Assurance with the Company for
1004, for which be pays 24, 411d. annually, may have a kailway
Policy for 1,0004, for one single payment of 40s, payable in the event
of his death by railway secident, and in addition to the 10s4,
secured by the ordinary Policy.

SUN LIFE ASSURANCE SOCIETY,

SHARE OF PROFIT INCREASED FROM
ONE-HALF TO FOUR-FIFTHS.
Policies effected with this Society after Midsummer, 1830, and
remaining in force at each Septennial period of division, will participate in FOUR-FIFTHS of the Net Profits of the Society
accruing after Midsummer, 1830, in proportion to their contributions to those profits, and according to the conditions contained
The Premiums required by this Society for insuring young
lives are lower than in many other old-established offices, and
Insurers are fully protected from all risk by an ample guarantee fund in addition to the accumulated funds derived from the
investments of Premiums.

Propertiums required office.

Propertiums may be obtained at the Office in Threadneedlestreet, London, or of any of the Agents of the Society.

MPORTANT to HOUSEWIVES .__ CREWS'S MPORTANT to HOUSE WIVES.—CREWS'S
RINSING LIQUID.—Every Lady in the lond, who is desirons
of having the colours of all kinds of Pabrics maintained after
washing, should instruct her servants and laundress to use
CREWS'S RINSING LIQUID. It effectually prevents colours
in every description of material from running in washing, and
scource brightness and permanence to the most ordinary material
and furfilive colours.

And furfilive colours.

Washing will not be conducted without it. Its cost is trifling;—
twenty drops of the Liquid are sufficient for one gallon of rinning
water. The trouble and vexation saved will be very great. Articles
need not be picked to pieces before being washed, for the Liquid
insures their drying clean and uniform in colour, under all circumstances.

sures units at a d. and 2d. each, by all Chemists and Oilmen the United Kingdom.

Manufactory, Commercial Wharf, Mile-End, London.

Manuractory, Commercial Wharf, Mile-End, London.
